## Dividend Enhancement

### On Long Positions

- **In general what does Dividend enhancement offer me?**

A Cayman Islands (or other offshore) domiciled Hedge Fund enjoys legal and administrative benefits associated with offshore incorporation. However, one downside to being domiciled in a jurisdiction that does not have an income tax treaty with the United States is that dividends on your US equity holdings are subject to a 30% withholding tax, which reduces the net yield of such holdings. Dividend enhancement provides incremental revenue to significantly mitigate this yield loss.

- **How do I get started?**

We will evaluate your long positions to determine enhancement potential. Please advise us of any positions held at other brokers or custodians and we will include those positions in our analysis.

UBS will conduct a suitability review and processes internal approvals.

Simultaneously, we will ask you to execute a Global Master Securities Lending Agreement (GMSLA) with UBS Cayman Ltd. We will also need to obtain from you an updated W-8 tax form.

- **Once I'm signed up, what's next?**

We'll contact you in advance of each enhancement opportunity. We will confirm the number of shares and the value of the enhancement with you. The enhancement provides you with (a) a 'substitute dividend' equivalent to your original 70% entitlement, plus (b) a stock borrow fee that increases your total yield to 85% or more.

**Example:**

200,000 shares Altria (MO); Dividend \$0.73/qtr

**Without enhancement:**

Gross dividend:  $200,000 \times \$0.73 = \$146,000$   
 Withholding for Cayman holder (30%) = (\$43,800)  
 Net Dividend Received (70%) = \$102,200

**With enhancement:**

Gross dividend:  $200,000 \times \$0.73 = \$146,000$   
 Withholding for Cayman holder (30%) = (\$43,800)  
 Substitute Dividend Received (70%) = \$102,200  
 Stock Borrow Fee (20%) = \$29,200  
 All-in yield (90%) = \$131,400  
 Enhancement benefit: \$29,200 (quarterly)

Permanent Subcommittee on Investigations

EXHIBIT #45 - FN 199

UBS 000529

703

♦ **How does the Stock Borrow work?**

There is an active market in borrowing and lending US securities. The borrower pays a fee to the lender for the use of stock for a period of time. UBS Cayman Ltd. (UBSC) borrows your stock (which it uses to facilitate the trading strategy of its clients) and pays you a stock borrow fee. While the stock is borrowed, UBSC provides cash equal to the stock's market value as collateral to you. You can invest this cash. The stock borrow fee that you receive (minus the 'rebate' paid by you on the cash collateral) enhances your investment yield.

♦ **Will this impact my trading or positions in any other way?**

In some cases, we may ask you to hold a position for up to 45 days but most trades are structured for a week or less. For the longer-term trades, the fund's Portfolio Manager may be consulted to confirm the intention to hold the shares for the longer period. We realize that in certain instances portfolios may unexpectedly sell shares that have committed to a term loan, and we can accommodate this, however in this event, restructuring costs may reduce the stock borrow fee.

♦ **What is a 'substitute dividend' and implications to me?**

When your shares are loaned over a dividend record date, instead of receiving the actual dividend, UBS Cayman Ltd. pays you a dividend equivalent amount as a substitute dividend. When the beneficial owner of the loaned stock position is a non-U.S. resident, there is generally no difference between the receipt of actual or substitute dividend payments. If the offshore entity is a partnership with some U.S. resident partners, receipt of an actual dividend may be preferable to a substitute, depending on the value of the stock borrow fee (enhancement) and other factors such as holding period of the stock and whether the position is hedged.

♦ **Is lending my shares a taxable event?**

No. Stock loans are not recognized as taxable events as long as conditions set forth in I.R.C. § 1058 are met. These include an agreement for borrower to return identical securities, the payment of substitute dividends from borrower to lender, and no change in lender's exposure to market gain and loss as a result of entering into the lending transaction. UBS Cayman's enhancement transaction with you is structured to meet these requirements.

As with all tax matters, you are strongly urged to consult with your own tax advisors with respect to any questions that you may have with respect to enhancement opportunities.

## Dividend Enhancement

### On Short Positions

#### • In general what does Short Dividend Enhancement offer me?

When a fund is short over a stock's record date, it is generally obligated to pay a manufactured dividend to the stock lender in order to make such lender whole with respect to the dividend that it would have received had it not loaned the stock. Under current market convention where US stocks are typically borrowed from US lenders, the amount of such manufactured payment is equal to 100% of the actual dividend amount. The goal of short dividend enhancement is to reduce the manufactured dividend charge to an amount less than 100% of the dividend.

#### • How do I get started?

We will evaluate your short positions in order to determine enhancement potential. Please advise us of any short positions held at other brokers or custodians and we will also include those in our analysis.

UBS conducts a suitability review and processes internal approvals.

Simultaneously, we will ask you to execute a Global Master Securities Lending Agreement (GMSLA) with UBS Cayman Ltd. We will also need to obtain an updated W-8 tax form from you.

#### • How does it work?

Short sellers normally pay a manufactured dividend equal to 100% of the actual dividend because US lenders are entitled to receive 100% of the underlying dividend and therefore require 100% in order to be made whole. However, UBS Cayman Ltd. has access to shares owned by holders domiciled in countries that do not have an income tax treaty with the United States and therefore are not entitled to the full 100% of the dividend amount. UBS Cayman Ltd. lends these 'cheaper shares' directly into your account, taking back margin release cash as collateral. On record date, we record your account as flat (rather than short). Instead, you are borrowing the shares and will be charged a dividend charge of 70%. In addition, you will incur a stock loan fee. Together, these charges will reflect a savings of approximately 3 to 5% of the short dividend charge. The borrowed stock and cash collateral are returned after 4 to 5 days.

#### • Once I'm signed up, what's next?

We'll contact you in advance of each enhancement opportunity in the event that shares are available from an off-shore lender to cover your position.

**Confidential Treatment  
Requested**

**UBS 000531**

705

**An example:**

Short 500,000 shares Merck (MRK); Dividend \$0.38/qr

**Without enhancement:**

Dividend charge to short:  $500,000 \times \$0.38 = \$190,000$

**With enhancement:**

Stock Loan charge at 96% of dividend = \$182,400

Enhancement benefit: \$7,600 (quarterly)

■ **Are there any other requirements for successful short dividend enhancement?**

The short position needs to be maintained over record date. If the position is covered before that date, enhancement will not be possible.

## Why offer Dividend Enhancement?

It differentiates us from our competitors and provides an opportunity for us to speak with Hedge Funds.

It's profitable. Estimated 2005 P&L is \$5 million. This amount should easily double next year after audited financials allow us to gather supply from external lenders. Currently, BGI, MLIM, JPM, SSB and others lend '70%' stock which we could borrow cheaply to enhance short positions.

Often, Hedge Fund will move positions in and leave them with us to gain the enhancement. This increases balances. Conversely, they will move positions to competitors if we can't offer enhancement.

It wins us new / added business that can generate P&L in other firm 'silos'. Some examples:

-2003 Carlson begins year with \$40 million in short balances. We begin long & short enhancing & their balance jumps to \$1.2 billion by year-end.

-2002 Highfields awards highly sought after PB mandate to CSFB yet we begin to enhance as a way to build a relationship. In early 2004, we are called in to pitch PB as a replacement for DB whom they intend to fire. Today's short balance is \$500+ million.

-2005 Canyon Capital rejects adding another PB but is willing to develop a relationship. We begin long and short enhancing as well as fully paid borrows on bonds and equities. Confident this will lead to a PB mandate.

-2005 SAC Capital similar to Canyon situation mentioned above.

-2005 Principled begins enhancing and after becoming comfortable with our reports, agree to lend us fully paid securities. We immediately borrow \$200 million of hard to borrow Calpine bonds for Prop and Hedge Funds to short.

-2004 Och Ziff begins to actively enhance. Balances are up substantially.

 Subject: Dividend Enhancement

Catherine,

As per our conversation Friday we would like to sign your  
 offshore accounts to a GMSLA agreement with our UBS Cayman entity so you  
 can benefit from our enhanced dividend program.

Here is a brief description of how it works:

Long positions

Currently you are entitled to 70% of any US dividend in the  
 offshore account. With these agreements we would borrow your stock and  
 lend it to a third party. By doing this we will be able to enhance your  
 dividend (85% on average).

e.g. Expressway Partners is long 144700 BAC.

70% of the dividend comes out to \$45,560. If we are able to find  
 an offshore short we can enhance your dividend an additional 15%  
 (\$9,767.25) for each quarter you have the position.

Short positions

You are currently liable for 100% of the dividend. If we cover  
 your short (lend you the shares) through the Cayman entity we can reduce  
 your liability (97% on average)

 $\alpha\beta$ Confidential Treatment  
Requested

UBS 000522

1. Request					
UBS IB Executive Committee requests the following facilities for UBS Cayman Ltd and UBS PW Int'l Inc.					
Type of Facility all in million	Existing Limits	Increase	New Limit/Capital	Tenor	Counter- party
Unsecured, Uncommitted Money Market Line for UBS PW Int'l Inc.	—	USD 170 (CHF 212.5)	USD 170 (CHF 212.5)	1y	UBS AG, Cayman
Capital Injection for UBS Cayman Ltd.	USD 40	USD 160	USD 200	—	UBS PW Int'l Inc

2. Executive Summary
<p>UBS Hedge Fund Services (HFS) provides dividend enhancement to hedge fund clients through the entity, UBS Cayman Ltd. (UBSC). To be competitive on price and service, UBSC must maintain relationships and adequate credit lines with lenders of stock. The better capitalization will address concerns of institutional clients with respect to credit quality and will allow expansion of its stock borrowing and lending relationships to non-affiliate counterparts.</p> <p>The injection will yield US\$ 8 million in direct revenues in year 1 plus give us a significant engine for growth of our Prime Brokerage franchise. In contrast, as the capital injection will be 100% leveraged, from a Parent Bank (UBS AG) perspective, only the loan to UBS PW Int'l Inc requires Regulatory Capital underpinning at 8% meaning a capital impact of \$13.6 million. On a Group consolidated basis the impact is zero.</p>

3. Reasoning and Background
-----------------------------

Ownership/Purpose of Subsidiary:

UBS Cayman Ltd. is a wholly owned subsidiary of UBS PW Int'l Inc., which is wholly owned by UBS Americas Inc. UBS Americas Inc. is a wholly owned subsidiary of UBS AG.

UBS Cayman Ltd. was formed in 1999 to facilitate long dividend enhancement for the firm's hedge fund clients, and in 2001 added short dividend enhancement services.

Business Summary/Rationale

The HFS business group (Hedge Fund Services) provides services for the Bank's hedge fund clients, including clearance, custody, financing, securities borrowing and lending, trade executions, reporting, and capital introductions. Revenue is generated in the form of interest spreads, fees, and commissions.

Many offshore clients are domiciled in the Cayman Islands. To attract, retain, and grow clients, HFS provides valued-added services. Long dividend enhancement allows a client

to maximize net after tax dividend yield on long positions. Short dividend enhancement allows clients to minimize dividend and fee costs incurred on short positions. Our ability to provide these services is a key selling point for clients. Our success is dependent upon access to a strong market supply of borrowable, low cost stock.

We currently borrow stock into Cayman via UBS affiliates in London and Zurich, incurring a 15% tax withholding cost (due to UK and Switzerland treaties with the U.S.). UBSC can eliminate this cost and broaden its supply base by borrowing directly from market counterparts.

HFS has worked closely with Regional Tax, Group Treasury, Compliance, Legal, FCD, outside counsel and counterparts to find a solution to our business need. We vetted and rejected several alternatives, including a parental guarantee and/or use of affiliate intermediaries, none of which were acceptable from a tax, regulatory, or bank policy standpoint.

Stock lenders have advised that UBSC's modest capitalization would result in small or no credit lines, or a request for greater over-collateralization (possibly up to 120%) which carries (a) a direct capital charge, (b) increased credit risk to UBS and (c) incremental costs of borrowing. Some competitors (MS, Barclays, ING) have addressed this issue by providing a parental guarantee of their Cayman entity. As stated UBS Group policy is not to give guarantees (with very few exceptions made) this solution is not available to UBSC due to other pre-existing business in the Cayman subsidiary which does not require a guarantee and UBS restrictive approach for parental support. Hence a leveraged capital injection is the optimal route.

Since lenders generally limit the number of counterparts they sign, we need to establish UBS relationships as soon as possible to avoid being locked out of key sources of supply

#### Revenue and Client penetration impact:

Besides supporting short dividend enhancements for clients, stock obtained can be put on swap with our proprietary desk which has similar demand. In addition, we will sign up with other Cayman market borrowers to on-lend excess stock at a spread.

Anticipated benefits include:

- Year one incremental revenue of \$8mm from short dividend enhancements and swap facilitation. (scalable upwards without further needed capital).
- Significant factor in support of HFS efforts to attract, retain, and grow hedge fund clients. [Example: Carlson Capital, a tier 1 bank client, had \$40 million short balances with HFS when we offered this product to them. Their balance is now over \$1 billion].

Initial targeted clients include Highbridge, Highfields, Andor, Canyon, Blue Ridge, & Lone Pine.

#### Funding/Capital Issues:

UBS PW Int'l Inc will receive a loan of \$170mm to allow for interest to be capitalized during the year until dividends are paid. UBS PW Int'l Inc. will inject \$160mm as capital into UBS Cayman Ltd. Therefore UBS AG need only underpin the loan to UBS PW Int'l Inc with 8% (\$13.6 mm reg capital).

712

αβ

As the capital will not be needed to fund business activities, funds will be invested back to UBS AG Cayman branch in the same tenor (rolled on a monthly basis) as the capital.

On a Group level the capital injection is netted out upon consolidation.

The \$160mm infusion level provides adequate capital (based on counterpart meetings and competitive knowledge) for needed credit extensions. UBSC's resulting \$200mm capital (\$40mm currently) is leveragable for lines across multiple market lenders. Any future profits will be paid as dividends annually to the parent in order to keep the capital level at \$200mm. Capital can be repatriated without negative tax or legal consequences.

**Bulk Risk Issues:**

The entity is exempt from the bulk risk calculation.

**UBS 000525**

Page 1 of 4

714

 $\alpha\beta$ Confidential Treatment  
Requested

UBS 000526

1. Request					
UBS IB Executive Committee requests the following facilities for UBS Cayman Ltd and UBS PW Int'l Inc.					
Type of Facility <i>all in million</i>	Existing Limits	Increase	New Limit/Capital	Tenor	Counter- party
Unsecured, Uncommitted Money Market Line for UBS PW Int'l Inc.	—	USD 170 (CHF 212.5)	USD 170 (CHF 212.5)	1y	UBS AG, Cayman
Capital Injection for UBS Cayman Ltd. (RXM C12478)	USD 40	USD 160	USD 200	—	UBS PW Int'l Inc.

2. Executive Summary
UBS Hedge Fund Services (HFS) provides dividend enhancement to hedge fund clients through the entity, UBS Cayman Ltd. (UBSC). To be competitive on price and service, UBSC must maintain relationships and adequate credit lines with lenders of stock. The better capitalization will address concerns of institutional clients with respect to credit quality and will allow expansion of its stock borrowing and lending relationships to non-affiliate counterparts.
The injection will yield US\$ 8 million in direct revenues in year 1 plus give us a significant engine for growth of our Prime Brokerage franchise. In contrast, as the capital injection will be 100% leveraged, from a Parent Bank (UBS AG) perspective, only the loan to UBS PW Int'l Inc requires Regulatory Capital underpinning at 8% meaning a capital impact of \$13.6 million. On a Group consolidated basis the impact is zero.

### 3. Reasoning and Background

#### Ownership/Purpose of Subsidiary:

UBS Cayman Ltd. is a wholly owned subsidiary of UBS PW Int'l Inc., which is wholly owned by UBS Americas Inc. UBS Americas Inc. is a wholly owned subsidiary of UBS AG.

UBS Cayman Ltd. was formed in 1999 to facilitate long dividend enhancement for the firm's hedge fund clients, and in 2001 added short dividend enhancement services.

#### Business Summary/Rationale

The HFS business group (Hedge Fund Services) provides services for the Bank's hedge fund clients, including clearance, custody, financing, securities borrowing and lending, trade executions, reporting, and capital introductions. Revenue is generated in the form of interest spreads, fees, and commissions.

Many offshore clients are domiciled in the Cayman Islands. To attract, retain, and grow clients, HFS provides valued-added Services. Long dividend enhancement allows a client

715

αβ

Confidential Treatment  
Requested

UBS 000527

to maximize net after tax dividend yield on long positions. Short dividend enhancement allows clients to minimize dividend and fee costs incurred on short positions. Our ability to provide these services is a key selling point for clients. Our success is dependent upon access to a strong market supply of borrowable, low cost stock.

We currently borrow stock into Cayman via UBS affiliates in London and Zurich, incurring a 1.5% tax withholding cost (due to UK and Switzerland treaties with the U.S.). UBSC can eliminate this cost and broaden its supply base by borrowing directly from market counterparts.

HFS has worked closely with Regional Tax, Group Treasury, Compliance, Legal, FCD, outside counsel and counterparts to find a solution to our business need. We vetted and rejected several alternatives, including a parental guarantee and/or use of affiliate intermediaries, none of which were acceptable from a tax, regulatory, or bank policy standpoint.

Stock lenders have advised that UBSC's modest capitalization would result in small or no credit lines, or a request for greater over-collateralization (possibly up to 120%) which carries (a) a direct capital charge, (b) increased credit risk to UBS and (c) incremental costs of borrowing. Some competitors (MS, Barclays, ING) have addressed this issue by providing a parental guarantee of their Cayman entity. As stated UBS Group policy is not to give guarantees (with very few exceptions made) this solution is not available to UBSC due to other pre-existing business in the Cayman subsidiary which does not require a guarantee and UBS restrictive approach for parental support. Hence a leveraged capital injection is the optimal route.

Since lenders generally limit the number of counterparts they sign, we need to establish UBS relationships as soon as possible to avoid being locked out of key sources of supply.

#### Revenue and Client penetration impact:

Besides supporting short dividend enhancements for clients, stock obtained can be put on swap with our proprietary desk which has similar demand. In addition, we will sign up with other Cayman market borrowers to on-lend excess stock at a spread.

Anticipated benefits include:

- Year one incremental revenue of \$8mm from short dividend enhancements and swap facilitation. (scalable upwards without further needed capital).

- Significant factor in support of HFS efforts to attract, retain, and grow hedge fund clients. - [Example: Carlson Capital, a tier 1 bank client, had \$40 million short balances with HFS when we offered this product to them. Their balance is now over \$1 billion].

Initial targeted clients include Highbridge, Highfields, Andor, Canyon, Blue Ridge, & Lone Pine.

#### Funding/Capital Issues:

UBS PW Int'l Inc will receive a loan of \$170mm to allow for interest to be capitalized during the year until dividends are paid. UBS PW Int'l Inc. will inject \$160mm as capital into UBS Cayman Ltd. Therefore UBS AG need only underpin the loan to UBS PW Int'l Inc with 8% (\$13.6 mm reg.capital).

716

 $\alpha\beta$ 

As the capital will not be needed to fund business activities, funds will be invested back to UBS AG Cayman branch in the same tenor (rolled on a monthly basis) as the capital.

On a Group level the capital injection is netted out upon consolidation.

The \$160mm infusion level provides adequate capital (based on counterpart meetings and competitive knowledge) for needed credit extensions. UBS's resulting \$200mm capital (\$40mm currently) is leveragable for lines across multiple market lenders. Any future profits will be paid as dividends annually to the parent in order to keep the capital level at \$200mm. Capital can be repatriated without negative tax or legal consequences.

**Bulk Risk Issues:**

The entity is exempt from the bulk risk calculation.

Via E-mail

MEMORANDUM TO: Christopher St. Victor-de Pinho  
(UBS)

FROM: Ronald E. Creamer

RE: Withholding Tax On Substitute Dividend Payments

You asked whether substitute dividend payments would be subject to US withholding tax in the case of payments made by a securities borrower to UBS Cayman Ltd. ("UBS Cayman") and in the case of payments made by UBS Cayman to a securities lender, as further described below.

Our views are based on the facts and assumptions set out below in this memorandum. They do not encompass any facts of which we are not currently aware. The tax consequences of the transactions could be altered by additional or different facts or assumptions. Our views are based on current law, and the tax consequences of the transactions could be affected by future changes in law. In any case, you should be aware that our views are not binding on the Internal Revenue Service ("IRS") or the courts, and we do not represent or warrant that the IRS or the courts will agree with our views. The advice in this memorandum is limited to the one or more U.S. federal income tax issues addressed herein and additional issues may exist that could affect the U.S. federal income tax treatment of the transactions that are the subject of this advice. This advice does not consider or provide a conclusion with respect to any issues not specifically addressed herein.

NY12529-402588.5

Permanent Subcommittee on Investigations  
**EXHIBIT #45 - FN 214**

UBS 000664

**Facts**

UBS Cayman is a Cayman Island entity classified for US tax purposes as a corporation. UBS Cayman borrows voting shares of publicly-traded U.S. corporations from unrelated persons who we assume for purposes of conservatism are non-U.S. persons ineligible for the benefits of a tax treaty that reduces withholding tax on dividends (and in the case of lenders that are partnerships for U.S. tax purposes, the partners of which are such treaty ineligible non-U.S. persons) or from UBS Zurich, a Swiss branch of UBS AG ("UBS Zurich"), and lends those shares to unrelated non-U.S. persons ineligible for the benefits of a tax treaty that reduces withholding tax on dividends (and in the case of borrowers that are partnerships for U.S. tax purposes, the partners of which are such treaty ineligible non-U.S. persons). The ultimate borrowers have borrowed the securities in order to deliver them against a short position or to replace the borrow for an existing short position.

Currently UBS Cayman conducts its activities by means of employees located in the United States that are also employees of UBS Securities LLC. You have represented to us for purposes of this advice that dual employees observe proper formalities as to their actions on behalf of their respective employers. It is proposed that in the future UBS Cayman conduct its activities by means of entering into a written agreement with arm's length terms appointing UBS Securities LLC as its agent to effectuate its activities. The proposed agency agreement will be terminable by UBS Cayman for any reason upon 60 days' notice, and UBS Cayman's officers and employees located outside the United States (who will not also be employees of UBS Securities LLC) (i) will be legally authorized to oversee, and practically capable of overseeing, the

agency agreement and (ii) will have and exercise the right and practical ability to reject trades. UBS Cayman will be legally and regulatorily capable of acting as principal, and UBS Securities LLC will be legally and regulatorily capable of acting as agent, under the agency agreement. UBS Cayman will keep separate accounts, will have a reasonable expectation of earning a pre-tax profit by reason of earning a positive arbitrage/financing spread on the transactions, and will reinvest its capital in third-party assets. The securities lender wishes to lend to UBS Cayman in order to (i) leverage its exposure to the underlying securities and (ii) exchange its investment in the physical securities for a synthetic investment which is not subject to US withholding tax. The securities borrower wishes to borrow from UBS Cayman in order to maintain a short position at the cheapest rate.

We have advised you in a separate memorandum of even date herewith that, for US federal income tax purposes, UBS Cayman should be respected as an entity separate from UBS Securities LLC and should be respected as undertaking its activities as principal, and we so assume for purposes of this memorandum.

#### Legal Analysis

Under the relevant Treasury regulations, substitute dividend payments made in a securities lending transaction in respect of a dividend paid by a US corporation are for withholding tax purposes US source income.<sup>1</sup> As a consequence the substitute dividends are subject to withholding at a 30% rate except to the extent provided by a tax treaty.

---

<sup>1</sup> Regs. §1.861-3(a)(6).

In order to avoiding possible over withholding under the regulations, the IRS announced in Notice 97-66 that the US withholding tax on a substitute dividend payment received by a lender should be calculated by determining the excess, if any, of (1) the rate of US withholding tax due on a notional dividend paid directly to the lender over (2) the rate of US withholding tax due on a notional dividend paid directly to the borrower and then applying the rate differential to the amount of the dividend.<sup>2</sup> The focus of the Notice is on whether the borrower would otherwise reduce the US tax that would have been imposed on the lender's receipt of an actual dividend.

In the case of substitute dividend payments made by the borrower to UBS Cayman, there would be no withholding tax under the Notice – that is, there would be no excess of the 30% withholding tax that would be due on a notional dividend paid directly to UBS Cayman over the 30% withholding tax that would be due on a notional dividend paid directly to the borrower.

In the case of substitute dividend payments made by UBS Cayman to the lender, there would likewise be no excess, since the rate of withholding tax on a notional dividend paid directly to UBS Cayman would be 30% and the rate of withholding tax on a notional dividend paid directly to any lender could not be higher.

This is the appropriate application of Notice 97-66, notwithstanding that the ultimate borrower disposes of the security and is therefore not subject to withholding on the actual dividend. It is clear under the Notice that there does not need to be any withholding tax on the actual dividend in order to invoke the rules limiting cascading substitute dividend withholding. We note, moreover, that the United States will have

<sup>2</sup> Section 3 of Notice 97-66, 1997-2 C.B. 328.

721

taxing jurisdiction over one actual dividend (in the hands of the ultimate purchaser), and the foregoing rules simply prevent greater tax by reason of the securities lending arrangements.

**Subject:** RE: Microsoft dividend

Tom: This is exactly what I had in mind – a synthetic long structure for non-US holders to get as close to 100% of that dividend value: Put/call combo (or as you mentioned in an earlier email, total rate of return swap). It makes sense as well what you say about pushing up against our trading limits on exchange traded contracts (and I agree with you that there is more comfort on the repo recharacterization analysis there, as you face the exchange as counterparty).

It will be hard to source from mutual funds and others entitled to the US favourable dividend rate for the exact reason you cite – they will call their shares back over dividend (unless our normal systems reimburse them). The more likely place to try to source the shares would be from non-US holders (again, synthetically: e.g. sale versus a derivative).

Maybe we could ameliorate your concerns re recharacterization as a repo with an OTC by making sure that either the sale or any potential purchase at the close of our derivative position to unwind the hedge (or both) are not done directly with a client, but rather from a broker. Also, I firmly believe that when ML has synthetic in and synthetic out (your example below on the short collar), it is hard to show a repo. Hedging a swap with a swap, e.g., should bring some comfort.

I will contact Paul directly as well.

**Subject:** RE: Microsoft dividend

Jackie:

I also just heard that there is *extreme* interest in foreign holders replacing their long physical position with a put/call combo. The exchange traded options will automatically lower their strikes by \$3 (as well as the \$.08 quarterly dividend) when the stock goes ex. The options exchange is pricing 100% of the dividend into the option, so the foreign holders have the incentive to do a "conversion transaction" whereby they sell their stock to the specialist and simultaneously replace it with a put/call synthetic, say strike around \$30. Embedded financing rate L+.50. Therefore, by holding options where the strikes automatically drop by 100% of the dividend, foreign holders can receive 100% of the dividend through the options.

I was told that ML will ultimately push up against our position limits on exchange traded options. That means that

Permanent Subcommittee on Investigations  
**EXHIBIT #45 - FN 229**

CONFIDENTIAL

ML-PSI-00147049

725

we would have an interest in doing an OTC structure priced exactly like the exchange traded options. At the same time, stock that has been loaned by mutual funds, margin accounts, etc. to ML to enable us to hedge short collar positions for insiders of MSFT will likely get called around the dividend date because the stock lenders will want the favorable rate. ML may therefore get squeezed around that time.

Normally, we are concerned where a customer (i) sells stock to ML; (ii) at the same time faces ML on an OTC TRS or forward or put/call combo; and (iii) gets the stock back at the end, either via physical settlement or a cross out or what have you. I am not that concerned where the options are exchange traded because ML is technically not the counterparty and we could close out our position through offset on the exchange while our customer still has his options with OCC. However, OTC options don't have that argument available, thus may be a repo, thus there may be withholding tax. It has been pointed out, however, that ML currently is short 19mm physical shares as hedges against short collars done with insiders. Those stock loans will likely get called in November. Therefore, these put/call combos will not be hedged with physical stock - it will have been returned to the stock lenders - but instead, up to 19mm shares, our position will be purely synthetic; long collars to insiders, short put/call combos to foreigners. A natural synthetic hedge. Is it a repo to the foreigners where ML no longer holds the physical shares? Maybe not. Also, I think that the fact that our options will exactly track exchange traded options is helpful.

What do you think?

Also, I know that Canadian pension funds and charities are exempt from withholding tax in the US. Maybe there's something we can do with that.

Thanks

Tom

Subject: RE: Microsoft dividend

I was involved in initial structuring/advice on the Morgan Stanley structure (was this something like MS Equity Capital Cayman?), but when I left lost track of what they did with the entity. I would assume that you are completely right on request to use the ML entity, although it may also have been a way for the trading desk to get around volume limits/total tax credit exposure limits imposed by the tax department on the use of that entity (complete speculation).

All your other ideas are well worth talking about - let me have a little think about them, and then let's sit down in NY?

Thanks!

Jacqueline

We had in place a 97-66 structure out of our SNCFE-Hong Kong entity, as it related to our Luxembourg SICAV funds. This structure was put on hold because the systems infrastructure supporting the trade did not work as anticipated. We also know that Morgan Stanley had a 97-66 facility for a couple of years, and our 97-66 thing was an internal response to that. Subsequent to our 97-66 trade, I heard that Morgan Stanley was asking ML to be on the "other side" of a trade, meaning that they would have paid us a fee to interpose our SNCFE entity in a stock loan, which could have indicated that they had a level of discomfort as to their level of exposure on the issue. Maybe not, but I had a hard time figuring out why else they would have made the proposal. I also heard that the IRS is looking into this issue as part of the single stock futures project and there is some concern that whatever rules they devise as part of that could adversely impact the 97-66 trades.

Other thoughts -

(1) Someone who owns MSFT could be in a position to incur an ordinary dividend - not qualifying for capital gains rate (1059, bad hedge, short holding period) - and a capital loss when the price of the stock drops ex-div. Maybe there's something we can do about that.

(2) Typical total return swaps or collars to avoid w/h tax.

(3) I'm wondering if there are DRD structures we can put together.

(4) MSFT is 25% of our Software HOLDERS product. Maybe we can do something with that.

I also got a call from Isabelle Limoges in Canada re: MSFT. We should call her and see what she's thinking about.

Jacquie- I forwarded this to Tom Visone yesterday. I don't know if he's called you. Tom and Larry have been one's working on 97-66 stuff so you should speak with one of them. Tom is in today but out tomorrow. Larry is out this week. I think both of them are around next week. If you set up a time to speak with them please invite me. I'd like to listen in.

Subject: Microsoft dividend

Elissa/Mike

Okay, so we always use Microsoft as the "no dividend" example in tax scenarios, and now that will have to stop! But \$32 billion dollars in dividends is a lot of dividends, and we should discuss whether there is value to be had.

I have put a meeting in on Friday with Erica and her team to discuss what we can and can't do with US dividends. Of course, any US tax suffered in MLI would be a cost as not creditable in the US, so I will assume that away. We will obviously need to discuss generally the Firm's position on 97-65 and look at derivative solutions.

Would either of you like to be at that initial meeting (in which case I will change the time) or maybe we can have this preliminary one with the London team (and then we can follow up when I am in NY in a couple of weeks).

We have a little time here - Record date 17 November, pay 2 December. We are asking the trading side about supply levels and costs.

Any thoughts gladly appreciated.

Kind regards

Jacquie

Are you sure that tax and legal have signed off on these? When we spoke to them a couple of days ago, we were pushing on the swaps, but they were still not clearly comfortable, and I brought up the LIFFE futures, which they had not considered yet. Just want to make sure we all have the same message – it is the exchange traded options and the exchange traded flex options they seemed most comfortable with.

Paul was going to synopsise for tax the various trades – and then they were going to do a more final review. I have sent Paul a separate email to make sure he has gotten final sign off – it is best to be sure. We explained to them that time was of the essence.

Thanks

Below is an email from Paul Cipriano that outlines the 2 structures (both are total return swaps) that have been approved by tax and legal. We are still awaiting feedback from tax and legal on a number of different structures including LIFFE single stock futures.

We will create a presentation asap and look to setup a road show to visit clients in the near future

**Subject:** RE: microsoft

Tobias,

I've attached two term sheets.

One covers a 1-mth trade where the client pays Libor flat financing and receives a discounted portion of the dividend (98.5%). The VWAP execution on our end is guaranteed with \$0.00 commissions. If the client wishes to reacquire his shares he may do so by obtaining a VWAP guarantee to buy stock from another broker. This would probably add \$0.01 to \$0.02 per share to the cost of the trade.

The other covers a more open-ended maturity (minimum = 1 mth / maximum = 1 yr) where the client pays a Libor + 30 bps financing rate and receives 100% of the dividend. This trade charges a commission of \$0.04 per share. If you work out the math the economics are roughly the same if the trade is on for 1 month.

If you would like an "all-in" quote as a percentage of the dividend for a time period of more than one month (i.e. today through the div payout) we can price that up as well. We can also offer the same economics for a counterparty who would prefer to trade a cash-settled OTC put/call combination instead of a swap. We are awaiting news from tax/legal to see if we can offer a different settlement method as well as single stock futures structures. I will certainly keep you in the loop as I get information.

Let me know what you think.

Tobias

Can you speak to Paul Cipriano of the US swaps desk about Microsoft – after our follow up phone call with tax dept today related to various ways our clients are going to expect to see yield enhancement trades on MSFT – it looks like they are pushing to keep within the exchange traded options and exchange traded flex-options world – I am sure you are more familiar with this than I am – in any case, we have been trying to point out that OTC contracts, including swaps and options, are going to be what many of our European and US clients are familiar with. They are not happy with a zero strike physically settled warrant, and we should talk about alternatives to this.

In any case, Paul is writing up (again) a list of the trades proposed and the advantages/disadvantages of each, with the view to get Tax dept guidelines asap. If you would not mind, it would be great to have your input there as well, to ensure we are presenting the full complement of trades we are expecting.

Thanks!

legal documentation as such. This is our only internally recommended listed trade, but clearly you have to be comfortable yourselves from a tax angle before you proceed.

-----Original Message-----  
**From:** Miller, Andrew (London)  
**Sent:** 07 October 2004 09:57  
**To:** iEquity Convertible/Derivative Sales  
**Subject:** Microsoft Trade yesterday

#### Mechanics of the trade:

There is a \$3 special dividend and also a \$0.08 ordinary quarterly dividend, both of which go XD Nov 17th.  
 Client sells MSFT common stock.  
 Clients buys a European Style Flex Option Call on MSFT  
 Clients sells a European Style Flex option Put on MSFT  
 (Call strike and Put strike are identical, giving synthetic performance of MSFT stock).  
 The price of the option synthetic is determined using 100% of both dividends.  
 The fees/commissions for the transaction will be 6 cents per share (\$3 per option contract)  
 The beauty of the trade is that the option strike is lowered by \$3 on the XD date, thereby giving 100% of the special dividend.

Also it is physically settled, so no unwind trade is necessary (the long call is either exercised or the short put assigned).

There is a small pin risk associated with the trade, in that at expiry there is a small chance the stock expires on the strike. If this looks likely, we would recommend an unwind close to expiry.

#### Below is a theoretical cash flow comparison for 1 million shares using an ATM synthetic:

##### Assumptions:

Share price is constant throughout period.  
 Client is an income tax treaty based holder with a US dividend withholding rate of 15% (non-treaty holders face 30% withholding tax)

#### 1. Holding 1m MSFT common stock (price \$27.65)

Dividends received:	
\$3.00 x 85% = \$2.55	\$2,550,000
\$0.08 x 85% = \$0.068	\$68,000
	<hr/>
	\$2,618,000 A
100% of both dividends	\$3,080,000
Tax Paid (15% withholding)	(\$462,000)
	<hr/>
	\$2,618,000

#### 2. Selling 1m MSFT common stock & Buying 1m synthetics.

Sell 1m MSFT @ \$27.65	\$27,650,000
Estimated interest on cash on deposit for 74 days	\$110,000
Pay \$0.03 for \$27.65 strike synthetic	(\$30,000)
Option commissions of \$0.06 per share	(\$60,000)
	<hr/>
	\$27,670,000 B

At expiry Buy 1m MSFT @ \$24.85	\$24,850,000 C
---------------------------------	----------------

CONFIDENTIAL

ML-PSI-00149879

734

(\$3.00 drop in strike price)		
Net Position B -C	\$3,020,000	D
Net benefit / Pick up D-A	\$402,000	(\$0.402 per share or 145 bp4)
Dividends received effectively:		
\$3.00 x 98% = \$2.94	\$2,940,000	
\$0.08 x 100% = \$0.08	\$80,000	
	\$3,020,000	

The fees of 6 cents per share (or \$3 per option) equate to 2% of the special dividend. Therefore the client receives 100% gross of the dividend through the trade, or 98% net after costs.

**Subject:** Microsoft Special Dividend: Yield Enhancement for Clients  
**Attach:** microsoft internal presentation ppt

The attached presentation describes a yield enhancement opportunity for Clients that may hold Microsoft shares (MSFT US).

Microsoft has announced a special dividend and a cash dividend (totalling \$3.08) payable in December.

Clients who hold Microsoft shares – whether as an free-standing shareholding or as part of a basket– and who will suffer withholding tax on such shareholding (whether at 15 or 30%) may benefit from one of the proposed transactions.

**Next Steps:**

1. Review attached slides (internal use only).
2. Identify Clients that may hold investments in MSFT US and could benefit from the yield enhancement.
3. Contact Cristina Garcia-Peri (6 1129) or Jacque Duval-Major (6 1753) of Corporate Equity Derivatives to discuss whether the transaction may be appropriate for the Client.

Our competitors are offering similar products, and time is of the essence. Deadline for transaction is prior to the MSFT shareholders' meeting on 9 November 2004 (due to internal approval parameters).

<<microsoft internal presentation ppt>>

Please note the presentation is marked "For Internal Use Only" and may not be distributed outside the Firm.

Kind regards

736

Permanent Subcommittee on Investigations  
**EXHIBIT #45 - FN 242**

ML-PSI-0289

737

**Microsoft Special Dividend: Yield Enhancement**

**Overview**

- MSFT announced 20 July that it will pay \$32 billion of dividend in a \$5 per share special dividend, record date 17 November, pay date on 2 December (there is also a regular cash dividend of \$.08 payable with the same record date.)
- Dividends paid to non-US holders will be subject to US withholding tax at 30% or a lesser rate (usually 15%) under a tax treaty. Depending on the tax status and application the relevant domestic tax law, US withholding tax suffered may represent an absolute cost to the non-US holder.
- The trade ideas in this presentation may provide a higher synthetic return to each holder than a physical dividend with withholding tax. Merrill Lynch makes money generally through the pricing of the dividend element of the synthetic transaction (and ML's hedge to that transaction).
- The Tax Department has approved these transaction parameters for yield enhancement transactions over MSFT shares.
- Next Steps: Identify clients who have long physical positions in MSFT US and discuss yield enhancement with them. The stakes to be identified do not need to be strategic stakes in terms of percentage, etc – just large enough to warrant the extra value that the derivatives transaction may provide them.
- Corporate Equity Derivatives will liaise with US Swaps Desk (Paul Cipriano, Rich Jessop) to coordinate execution of the transactions.

1

ML-PSI-0290

738

### Microsoft Special Dividend: Yield Enhancement

---

**Talking Points/Considerations**

- Does Client hold MSFT either as a free-standing investment, or as a part of a basket or index (the relevant fact is that the Client is entitled to a real MSFT dividend.)
- What withholding rate is generally applicable to Client in respect of US equities? For most Clients organized in jurisdictions with a tax treaty with the US, this will generally be 15%. For non-treaty jurisdictions (e.g., Cayman Islands, Hong Kong, etc), the rate will be 30%. The relevant Client entity is the actual entity holding the MSFT shares.
- Does the Client currently get any benefit from the withholding tax suffered on US dividends? This generally means that Client can take a foreign tax credit in respect of the withholding tax. This is not possible in all jurisdictions, and there may be other limitations on foreign tax credits that reduce the value to the Client.
- Will there be any negative consequences to the Client receiving a payment under a derivative as opposed to a dividend on a share? This may depend on the jurisdiction of the Client, and on the form of derivative transaction. Please discuss with Corporate Equity Derivatives on a case by case basis.
- The transactions described in the following slides are based on the requirements approved by the Tax Department for these transactions. Any deviations from the terms described must be approved by the Tax Department.

ML-PSI-0291

739

**Microsoft Special Dividend: Yield Enhancement**

**Equity Swap**

- Client is long MSFT US. Client sells MSFT to MLPTS, or sells to market.
- Client enters total rate of return equity swap with ML, under which Client pays depreciation plus LIBOR-based financing and receives appreciation plus a percentage of dividends (97% indicatively).
- The swap must be written for a minimum of 12 months. The client has the right to terminate the trade only after a minimum of 31 days.
- Trade must be entered prior to MSFT shareholder meeting approval of dividend.
- There must be at least one periodic payment (i.e. reset) prior to the termination of the trade.
- The final valuation of the swap, on the confirm, will be listed as the VWAP on the primary exchange (NASDAQ) on the final valuation date. If the client chooses to terminate the swap prior to the confirmed final valuation date the calculated price may be VWAP or another calculated average. We cannot terminate the swap at a closing price.
- If the client wishes to BUY shares of MSFT on the final valuation date or the early termination date he may not use any Merrill Lynch entity as his executing broker.

ML-PSI-0292

740

**Microsoft Special Dividend: Yield Enhancement**

**Option: Exchange Traded (flex option)-**

- Client is long MSFT US. Client sells MSFT to MLPFS, or sells to market.
- MLPFS sells / Customer buys Flexoption call on MSFT
- MLPFS buys / Customer sells Flexoption put on MSFT
- Option contracts will be listed by the CBOE. Strikes and maturities will be as close to regular listed series as possible (i.e., automatically adjusted downward after the special dividend is approved).
- Contracts are physically settled.
- Trade must be entered prior to MSFT shareholder meeting approval of dividend.
- Merrill Lynch may not facilitate more than 50% of the customer's order. It is a market maker for the options, and it is assumed MLPFS will be broken up for at least 20% of the option/share packages.
- Physical unwind in accordance with CBOE exchange rules.

ML-PSI-0293

741

**Microsoft Special Dividend: Yield Enhancement**

**Option: Over the Counter**

- Client is long MSFT US. Client sells MSFT to MLFPS, or sells to market.
- MLI sells / Customer buys OTC call on MSFT
- MLI buys / Customer sells OTC put on MSFT
- Option contracts should be written as similarly to listed option contracts as possible.
- Contracts must include a clause that in the event of a corporate action or special dividend the counterparties agree to adjust their contracts by the same method as the CBOE (Exchange Adjustment)
- Contracts must be cash settled
- Trade must be entered prior to MSFT shareholder meeting approval of dividend.
- The final level will be listed as the VWAP on the primary exchange (NASDAQ) on the final valuation date. We cannot terminate the options using a closing price as a reference level.
- If the client wishes to BUY shares of MSFT on the final valuation date or the early termination date he may not use any ML entity as his executing broker.

## Global Financing Products Group Equity Swaps

### Value Proposition

#### ML Franchise Benefits

- ML has one of the best Global Footprints: Client Driven - Capital Markets/Origination, Research, Trading, Distribution
- ML has invested more of its own capital, directly and through strategic ventures, than our leading competitors
- ML has credit ratings among the best in the Industry
- ML has extended more credit to hedge funds and their principals, creating levered share classes and transporting alpha
- ML's appetite for risk increases its willingness to commit capital and make risk markets on swap products
- **ML's robust global in-house inventory provides the benefits of cost efficiency and stable borrow which does not exist to the same extent at other firms**
  - Extensive and diverse supply which includes "hard to borrow" names is a direct function of the strong retail box and institutional borrowing relationships
    - US supply - \$290B (\$40B from ML "Box" - \$250B from access to over 300 portfolios)
    - Japan - \$15B of exclusive supply from ML internal inventory, exclusive portfolios and private client
    - Asia - \$60B of inventory through institutional lending relationships (\$5B in India, Korea and Taiwan).
    - UK - \$150B through exclusives, internal inventory and first call relationships.
    - Europe - \$185B through exclusives, internal inventory and ML European offices. (>\$1B of Emerging Europe)

## Global Financing Products Group Regional Operations

### Americas

- The Merrill Lynch Swaps desk combined with the Global Equity Derivatives team delivers financing products covering North America, Canada, Europe, Asia and Africa to clients based in the Americas. It is the only financing desk on the street that has dedicated multi-regional derivative capabilities
- Merrill Lynch is a leading US derivatives house
  - Full range of option products from plain vanilla to exotics. Merrill stands out from its peers by delivering unique product offerings- such as sector/customized baskets options, variance options, hybrid options on multiple security baskets (e.g. gold, oil and FX)
- Merrill Lynch is a top rated equity franchise, and is ranked #1 in both Listed and ADRs\*
- Product innovation and improved functionality are contributing to Merrill capturing a larger market share of the global financing business. ML continues to develop products that address the needs of our clients
- Merrill Lynch was recently named the #1 firm in Convertibles New Issues in 2006
- The Merrill Lynch Swaps desk takes the basic services, bundles it, and delivers a value-added package
  - 11 person trading team and ability to send orders to cash sales
  - International index swaps trader
  - Combined financing and risk-taking capabilities
  - Tax and Regulatory consulting services
  - Market impact and other analytical tools
  - Dedicated Marketing Team available for client consultation
  - Swap Client Service Representatives
  - On-Floor ISDA negotiating team

\*NYTD rankings as of April 30, 2006 according to AulEs

## Global Financing Products Group Regional Operations

### ASIA

- Leading Asian Equities Derivatives Franchise
- 8 person Asian Financing Desk
  - Financing desks located in Japan and Hong Kong
- Full Sales coverage based in the US
- Largest Non Deliverable Market Inventory
- Innovative CB and PIPF structure
- Geographic Footprint – offices in 14 Asian markets
- Top 3 Ranked Equity franchise by Market Turnover
- Full Service Asian Prime Brokerage Offering
- Merrill Lynch is a leader in the sector swap market
- IFR ranked Merrill Lynch Equity House of the Year
- Merrill Lynch has consistently been a global leader in 9 Asian countries

755

ML-PSI-0135

## Global Financing Products Group Regional Operations

### Developed Europe

- The 11 person European Financing desk is comprised of 6 single stock and 5 index swap traders, based in London provide coverage across Developed and Emerging European markets
- Established 12 years ago, the Financing desk is well positioned in the European market and is considered a leader in terms of product innovation and flexibility
- Merrill Lynch controls a large market share in European Sector Swaps
- Merrill Lynch recently announced the combination of the Hedge Fund Flow Derivatives, U.K. Institutional and Convertible Bond sales forces into a cohesive Equity Derivatives Sales team led by Michael Ward, which will facilitate an integration across equity-linked products
  - International Financing Review (IFR) voted Merrill Lynch European Equity House of the Year
  - The 2005 ISF Stock Lending Survey highlighted the significant improvement made by ML globally in the last 2 years - ML's ranking improved in 7 of 8 categories

756

ML-PSI-0136

## **Global Financing Products Group Regional Operations**

### **Emerging Europe, Africa and the Middle East**

- Merrill Lynch is leading the next generation by combining European emerging markets equity finance, derivative and cash risk into one group
- **Trading and Research Highlights**
  - As per Autex, 31.5% market share of advertised EM trade volume for 2005 (#1 market share)
  - With more broker/dealers only now investing in expanding their EM research capabilities, ML is well positioned with over 30 analysts in most of the major EMEA markets
  - ML has been #1 ranked consistently in the Top 3 since 2000, with the number 1 and 2 slots in Turkey and Israel respectively
  - In South Africa, ML consistently ranks 1 or 2 in trading JSE volume. It is the first Intl self clearing member of Safex, which offers futures clearing and execution to international clients. ML is consistently #1 in execution

ML-PSI-0137

## Global Financing Products Group Equity Swaps

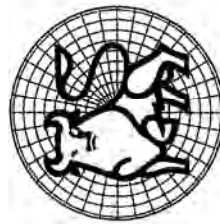

### Latin America

- ML currently maintains a presence in three Latin American markets - Brazil, Mexico and Chile - primarily trading swaps, FX futures and synthetic futures
- ML maintains an experienced 3-person "on the ground" derivatives team in Brazil to handle local flow. International access is covered out of New York, through the Global Equity Derivatives Desk
- Brazil
  - Hedge Funds access Brazil locally through swap primarily for the tax benefits
  - Largest synthetic futures book- Finite capacity contributes to client selection/ pricing power
  - Number 1 or 2 position in equity trading volume
  - ML's market share is expanding significantly
- Mexico
  - ML has cash traded the Mexican market since 1995, derivatives traded since 2001
  - ML competitive advantage comes from being one of only a few brokers who can access the local equity derivative markets. Other Broker/Dealers access the markets through Merrill
- Chile
  - ML has increased market its market share in Chile
  - Recent acquisitions have placed ML at a competitive advantage, now being able to provide the ability to gain short exposure

ML-PSI-0138

**Equity Swaps Basics**  
Features, Pricing, Execution, Operations, Key Usage  
Considerations

ML-PSI-0139

### Global Financing Products Group

#### Equity Swaps Basics

##### Features

- An equity swap is a customized contract between the Client and Merrill Lynch governed by ISDA (International Swap and Derivative Association) terms and conditions
- The swap provides economic exposure to an underlying equity, equity-related security, equity basket, or equity index
- Under a swap agreement, two parties agree to exchange total return (or price) performance of an underlying asset in exchange for a stream of payments
  - A client long a swap would pay ML LIBOR plus some predetermined spread and any depreciation in the security. ML pays any dividends and any appreciation in the security
  - A client short a swap would receive LIBOR less some predetermined spread from ML, in addition to any security depreciation. The client would pay ML dividends and any security appreciation

##### Flows

- Long Swap:
- Short Swap:

Long swap exposure closely replicates the economics of the underlying assets – clients receive equity performance, manufactured dividends and manufactured corporate actions, but lose voting rights associated with physical ownership of shares

Equity Swaps Basics

Sample Term sheet

IBM Total Return Equity Swap  
Terms of Deal Done as of April, 2006

Investor	>	xxxxxx
Merrill Lynch Entity	>	Merrill Lynch International (MLI)
Trade Date	>	April 2006
Effective Date	>	(t+3)
Valuation Date	>	May 2006 (13 months)
Settlement Date	>	t+3
Underlying Securities	>	IBM common equity
Shares / Total Notional Value	>	USD 20,000,000 (250,000 shares)
Strike	>	\$80.00
Investor Receives	>	The Negative Total Return of IBM
Investor Pays	>	3 Month USD LIBOR - 35bps
Initial LIBOR (3 mo LIBOR on Trade Date)	>	The Positive Total Return of IBM
Spread	>	[5.31%]
Initial All-in Rate	>	35bps
Dividend Assumption	>	[4.96%]
Reset Frequency	>	100% to be included in Total Return on an ex-date basis payable at Reset Date
Commissions & Fees	>	Monthly
	>	3 cent per share commission (taken off strike price)

761

ML-PSI-0141

## Global Financing Products Equity Swaps Basics

### Pricing Considerations

- Commissions
  - Generally consistent with cash execution rates  
(ML offers both risk and agency executions)
- Financing
  - Long Performance: Term LIBOR (at time  $t$ ) + spread
  - Short Performance: Term LIBOR (at time  $t$ ) - spread  
(Spread is based on Prime Brokerage financing rates where applicable)
- Dividends
  - US equities
    - Long positions- ML can pay an amount equal to 100% of the ordinary dividend
    - Short Positions - Clients pays an amount equal to 100% of the ordinary dividend
  - International Equities
    - Percent of dividend pass thru will depend on particular country, markets, security name and position size

762

ML-PSI-0142

## Global Financing Products Equity Swaps Basics

### Execution

- **ML Interface**
  - Clients can transact directly by calling
    - the swaps trading desk
    - their cash equity sales trader
    - their derivatives salesperson or sales trader
- **Electronic Order Transmission (depends on market)**
  - Developed Europe - Equity swap clients have full DMA capabilities to execute stocks trading on Pan European exchanges
    - DMA execution ability is independent of where the client is domiciled
  - Asia - DMA capabilities being developed in Japan and other Asian markets
  - Emerging Markets - We are in the process of establishing DMA for Emerging Markets, currently testing South Africa, Greece, Czech, and Hungary, with Poland, Israel & Turkey due to be set up shortly
- **Other Broker Executions**
  - In certain markets, clients have flexibility of executing with another broker and giving up the trade to Merrill

ML-PSI-0143

## Global Financing Products Equity Swaps Basics

### Documentation

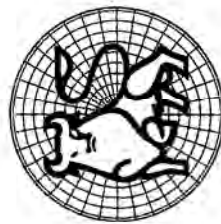

- ISDA\* documentation required to trade swap product
  - Credit Support Annex (CSA) - Governs margin agreement between ML and the client
    - Prime Brokerage terms are incorporated into the CSA for existing PB clients
- Equity Swap Addendum (ESA)- Sent in addition to ISDA
  - Client is consenting to negative affirmation and to master swap confirmations for both total return swaps and portfolio swaps
- Standard ESA with Global Swap language available for
  - Portfolio swap in Europe and US
  - Discrete swaps in US, Canada and Brazil
  - Upcoming regions: Emerging Europe
- Negative affirmation requires a client to contact ML within a predefined number of days of receiving a confirm to request an amendment if they do not agree with the terms of the confirm. Otherwise the confirm stands.
  - Improves operation efficiency by minimizing documentation overhead

\*International Swaps and Derivatives Association

764

ML-PSI-0144

Swap Applications

765

ML-PSI-0145

## Swap Applications

### Key Usage Considerations

- **Sector/Index Exposure**
  - Access to sector, country, regional and multi regional indices through options, swaps and synthetic futures
- **Yield Enhancement**
  - Dividend enhancement (recapture withheld dividends for foreign investors)
  - Trading tax mitigation (ex. Stamp Tax in UK)
  - Synthetic Stock Loan
- **Tax Management**
  - US Income Tax (timing and character trades)
  - Capital gains tax mitigation (Germany, Turkey, Portugal, Brazil)
- **Market Access**
  - Synthetic long access in countries where trading restrictions prevent foreign ownership of local shares
  - Synthetic short access in countries with restrictions on short selling and relatively undeveloped stock loan markets
  - Long/short access to a variety of MSCI indices
  - Emerging market index and single stock discounted long exposure
- **Operational Efficiency**
  - Leverage
  - Synthetic Prime Brokerage
  - Diversifying Stock Loan
- **Barra Factor Swaps**
  - Hedging Alternatives
  - Risk Management

766

ML-PSI-0146

## Swap Applications and Advantages

### Index and Exposure Customization - Alternatives to ETFs

- Sector/Index Swaps - Provides long or short exposure to an index on which there is no other tradable instrument with comparable liquidity or ability to go short
- Sector exposures are available on the following
  - US - S&P 400, 500, 600, 1500
  - Europe - Dow Jones 600, Dow Jones Euro Stoxx
  - Japan - ML Designed Indices
  - Country - Local and MSCI Indices
  - Regional Cross-Country Indices
- Customized baskets can be created for more efficient and granular exposure
- ETF replacement - Swaps can be used to trade the underlying components of the ETF when the borrow goes hot
- Investors can use index/sector swaps as a powerful hedging or equitization tool

767

ML-PSI-0147

## Swap Applications and Advantages

### Yield Enhancement

- **Dividend Enhancement** – As synthetic instruments, swaps are not subject to the withholding taxes that may be incurred by non treaty or offshore investors who own the physical shares of a dividend paying stock or a convertible preferred
  - Withholding rates for US investors on European stocks are generally 15%
  - Withholding rates for offshore investors domiciled in non-treaty countries investing in the US or in Europe is generally 30%
  - In Canada, US investors are withheld 15%, while Non Treaty domiciled funds are withheld 25%
  - Convertible preferred, generally a high yielding security, can be transacted through swap
- **Stamp Tax Mitigation** – Investors incur a 50bps Stamp Duty on all purchases of UK physical securities. Total return swaps are exempt from this charge
- **Synthetic Stock Loan** – Investors may own shares for which there is substantial stock borrow demand. By entering into a long swap with ML on those shares, the client could own enhanced yield based on the stock loan value

ML-PSI-0148

## Swap Applications and Advantages

### Market Access

- **Emerging Market Long Access** - In certain emerging markets there are trading restrictions or limitations on foreign investors which can hinder direct physical exposure. The alternative could be the ADR/GDRs, but these can trade at a premium to the local security. The easiest way is to access these markets synthetically through a total return swap
- **Emerging Market Short Access** - Swaps can provide short access in markets which prohibit or restrict short selling and in those with relatively immature stock loan capabilities
- **Emerging Market Index Exposure** - Lack of a well developed futures and options market can limit index exposure in most emerging markets. Equity swaps can provide long and short exposure to local indices, as well as those which comprise numerous stocks in various currencies
  - Synthetic Futures give investors index exposure in markets where futures may not be CFTC approved
- **Outperformance** - Discounted synthetic long swaps offer investors a reasonable substitute for long stock positions if there is high demand from other investors to borrow the shares
  - Back to Back swaps provide discounted long exposure on one side and synthetic short exposure on the other side

ML-PSI-0149

## Swap Applications and Advantages

### Tax Efficiency

- **US Income Tax** - Through various swap structures such as Loss Recognition and Gain Deferral strategies, investors can harness tax value in their portfolios, by changing the timing of taxable events
  - **Loss Recognition** - Investors can retain economic exposure and generate losses to offset gains
  - **Gain Deferral** - Investors may defer position gains by entering into structured swaps that partially hedge economic exposure
  - **Character Trades** - Short term into Long term. A short position held in swap for over a year, will generate a long term gain/loss. A short physical stock position will always generate a short term gain, no matter how long the security held
- **Capital Gains Tax** - In certain markets, investors domiciled in a non-treaty region may be subject to capital gains tax on physical ownership of shares. Synthetic access of these markets may be optimal for such clients
  - India, Turkey, Germany, Brazil

ML-PSI-0150

## Swap Applications and Advantages

### Operational Efficiency

- **Leverage** – Equity Swaps are primarily and over-the-counter financing instrument that can provide leverage
  - Amount of leverage will depend on the underlying
- **Packaged Execution** – There can be potential savings as well as ease of execution from bundling financing, dividends, stock borrow, currency and collateral in one product
- **Synthetic Prime Brokerage** – Investors may be able to reduce their administrative, operational and clearing requirements through swaps
  - In addition, for hedge funds not looking to open a new prime brokerage account, the total return swap may be the ideal way to diversify balances
- **Diversifying Stock Loan** – One advantage of shorting through a swap is the potential for term borrow, which insures against the borrow getting called
  - Particularly relevant for indices and baskets where a typical stock loan desk may not be as efficient in pricing up a portfolio of shorts

ML-PSI-0151

## Swap Applications and Advantages

### Barra Factor Swaps

- Clients can gain or hedge exposures to Barra factors such as volatility or momentum through the usage of Barra factor swaps
  - Factors are quantifiable variables that explain portfolio behavior
- The Barra factors are largely uncorrelated to each other as well as standard instruments such as sector swaps so are an ideal way to get long or short exposure
- A Barra factor overlay can significantly reduce portfolio risk with no or minimal performance reduction

## Project Gemini

### Executive Summary

- Project Gemini is a program intended to provide selected international investment funds holding US equities with an enhanced after tax return.
- The following materials contemplate a transaction with MLJIF, a MLJM Luxembourg fund, as an illustrative transaction intended to represent the trade. We are seeking program approval to execute transactions with MLJIF and other international funds.
- Target counterparties include foreign pension plans and investment funds with US equities.
- The transaction involves:
  - (1) A stock loan from MLJIF to a newly formed Jersey Island entity, a subsidiary of ML Group Inc.
  - (2) A series of derivative transactions executed with the Jersey entity and MLJ designed to hedge ML market risk.
- Similar programs are offered by numerous Wall Street investment banks. MLJIF is currently executing these trades with several of Merrill Lynch's competitors and is interested in executing trades with Merrill Lynch.
- A similar transaction with MLJIF was executed by Merrill Lynch in the fall of 2003 relying upon a Hong Kong based ML subsidiary. The entity was shutdown by local regulators due to unrelated problems in derivative trading. Additionally, the entity experienced operational difficulties with the transaction. We intend to engage the Bank of New York to perform stock borrow, collateral and other logistics to ensure ongoing smooth execution.
- Merrill Lynch role in transaction: Merrill Lynch, through MLJ and a newly formed Jersey corporation and subsidiary of ML Group, Inc., will engage in stock borrow, equity and OTC transactions and will be transacting as a principal.
- Covered Party: we intend to broadly market the Gemini transaction and expect counterparties (as yet unidentified) to be Covered Parties.
- The transaction received conditional NPR approval (notably requiring completion of systems development work) and CSOC approval on July 21, 2005.

### Project Gemini

#### Transaction 2: JerseyCo Borrows Equities and Sells Short to Market (Cont'd)

JerseyCo will hire a broker's broker (e.g., Prebon) to sell short on its behalf high yielding equity securities to a Market Counterparty and receive \$400 million in cash. The Market Counterparty will be a US corporation. It is expected that the equities will consist of 362,500 names with concentration of 20-25 million per name.

JerseyCo will borrow the shorted securities from one of more of the MLJIF funds (the "Stock Loan") in order to settle its short sale.

JerseyCo will post cash collateral of (113% or \$452 million) of the value of the underlying stock to MLJIF under the stock borrow agreement (cash to be obtained from existing cash balance and short sale proceeds).

The Stock Loan will be terminable by either party at any time. MLJIF will use the Bank of New York ("BONY") as custodian.

ML & Co. will provide JerseyCo with a financing facility for ongoing collateral true-up for mark to market volatility.

MLJIF will invest the collateral received into money market funds.

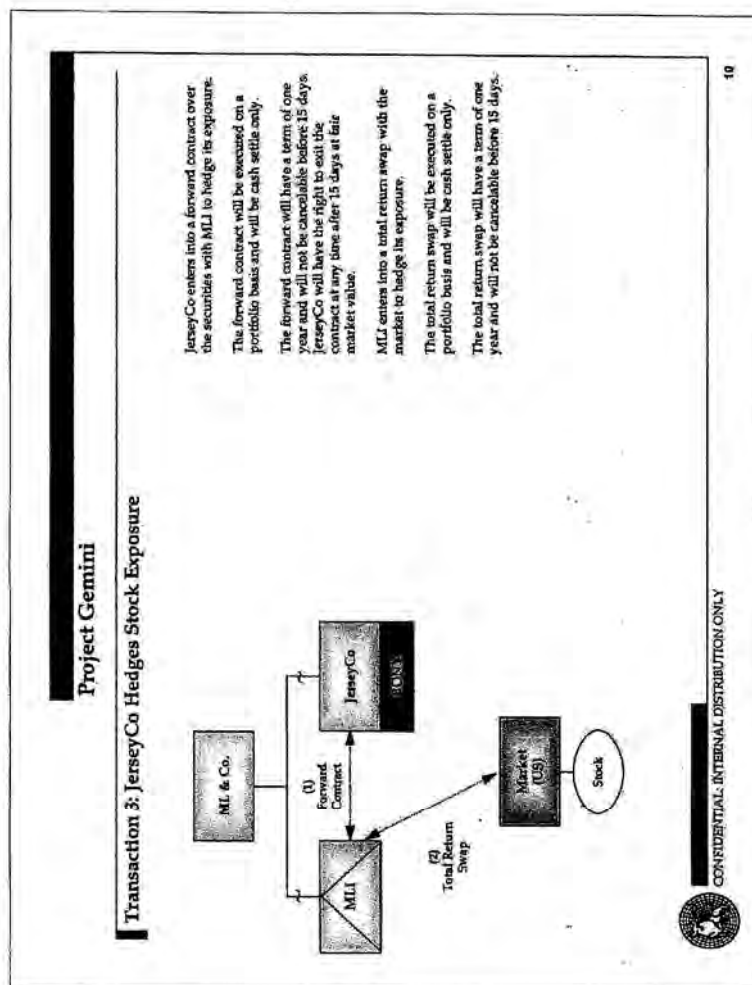

JerseyCo will fund the balance of its cash (\$248 million) to ML & Co or an affiliate in the form of a demand note to be guaranteed by ML & Co.

JerseyCo will engage [BONY] as custodian / arrange to perform the following activities:  
 Stock borrow logistics and collateral maintenance overnight  
 Delivery and settlement for the short sales

## Project Gemini Transaction Analysis

### Summary of US GAAP Analysis

- JerseyCo is expected to be consolidated by Merrill Lynch.
- On a consolidated basis, Merrill Lynch is expected to record an asset equal to the collateralized stock borrow amount and liabilities for the stock held in inventory and any over-collateralization funding as follows:

Merrill Lynch Consolidated	
Assets	
Cash	452
Stock Borrow	-
Interco Demand Note	
	452
Liabilities/Equity	
Inventory (Stock Short Sale)	400
Interco Debt	-
Borrow From the Street	52
	452

- On a consolidated basis, Merrill Lynch is expected to record interest income related to the stock borrow and will record principal transactions related to the MTM on the short sale and the total return swap hedge executed with the street.

### Summary of UK GAAP Analysis

- Under UK GAAP (both current and revised rules for periods from January 1, 2006), MLL, as a broker/dealer, will carry both the total return swap and the forward agreement on a mark to market basis (i.e., at fair market value) with gain/loss being recognized immediately in the profit and loss account.

CONFIDENTIAL: INTERNAL DISTRIBUTION ONLY

ML-PSI-0315

## Project Gemini Other Considerations

### Legal, Regulatory and Rating Agency Issues

- **Rating Agency**  
The transaction will not be rated and has no related issues.
- **Regulatory**  
The mark on the total return swap and forward agreement will attract minimal regulatory capital charges in the UK as the trades are expected to have a term of 15 - 30 days. Additionally, the affiliate exposure for MLI arising from the forward agreement to JerseyCo is within acceptable limits.
- **Compliance**  
The activities of JerseyCo would not require the entity to be registered as a broker/dealer in the US.

### Merrill Lynch Employee Interest

- **Financial Interest in Transaction**  
None
- **Involvement of ML Employees in SPs or Covered Parties**  
The newly established Jersey entity will have officers and directors including Merrill Lynch employees and other non-Merrill Lynch persons.

CONFIDENTIAL: INTERNAL DISTRIBUTION ONLY

ML-PSI-0316

## Project Gemini

### Other Considerations

#### Documentation

- 1 Loan Agreement between ML & Co., as lender, and ML Group, as borrower (U.S. law)
- 2 Jersey law document(s) to govern capital contribution from ML Group to JerseyCo, and equity issuance to ML Group
- 3 Short Stock Sale between JerseyCo, as seller, and market counterparty, as buyer (U.S. law)
- 4 Stock Borrow Agreement to govern loan by MLJIF to JerseyCo (U.K. law)
- 5 Cash Collateral Account Agreement by JerseyCo, in favor of MLJIF, to secure obligations under Stock Borrow Agreement (U.S. law)
- 6 Revolver Loan Agreement by ML Group, as lender, to JerseyCo, as borrower (U.S. law)
- 7 Guarantee by ML & Co. in favor of ML Group, guaranteeing ML Group Revolver Loan Agreement (U.S. law)
- 8 Custodial Agreement between JerseyCo, and (Bank of New York) (U.S. law)
- 9 Forward Contract between JerseyCo, and MLI (U.K. law)
- 10 Total Return Swap by MLI with market counterparties (U.K. law)
- 11 ISDA between JerseyCo and MLJIF
- 12 ISDA between JerseyCo and MLI (U.K. Law)
- 13 Jersey Service Agreement MLI (and MLJM GI)

**PROJECT GEMINI**  
*OPERATING PLAN*  
*as of October 11, 2005*

Permanent Subcommittee on Investigations  
**EXHIBIT #45 - FN 255**

CONFIDENTIAL

ML-PSI-00049447

**PROJECT GEMINI**  
**OPERATING PLAN**  
*as of October 11, 2005*

**Introduction**

Project Gemini is a structured transaction designed to provide yield enhancement to non-US clients of Merrill Lynch that own US dividend-paying equities. From the client's perspective, the transaction involves a market standard stock loan to a subsidiary of Merrill Lynch ("ML Equity Solutions Jersey Ltd" or "MLESJ"). The client realizes economic enhancement through the stock lending fee.

MLESJ is a newly-formed trading entity established to effect stock lending transactions with clients and to enter into derivative transactions and short sales to hedge its trading positions. MLESJ has \$300m of capital and a lending facility from ML&Co. MLESJ will have stand-alone audited financial statements.

**Marketing Guidelines**

The marketing of Project Gemini will be done on a very selective basis. All prospective clients should be pre-screened by John Addis (212 449 5342), the product sponsor, before any marketing takes place.

The structure may impose some US tax risk on ML. To manage any potential risk, ML tax has established a cap on the transaction which focuses on our economic return relative to potential tax risk. *Therefore, it is imperative that we achieve optimal economics on the transaction.* Clients may not be offered enhancement of greater than 50% of potential US withholding taxes without approval from John Addis. As balance sheet impact and funding costs are identical regardless of withholding tax rates, clients in 30% jurisdictions are preferred although for appropriate economics, clients in 15% jurisdictions may receive consideration.

Several of our competitors offer similar products (most notably Morgan Stanley, Lehman Brothers, and many non-US banks) so many natural candidates for the transaction are already being serviced and may command pricing concessions (State Street, BGI). Additionally, clients such as hedge funds which may be active in the equity swap market will generally not be candidates for the product.

The success of Project Gemini and our ability to achieve target economics relies on ML's superior reach and breadth of relationships relative to our competitors. Ideal candidates are likely to include SICAVs and Irish mutual fund companies.

**Operational Requirements**

1. Stock Loan Counterparty Establishment
  - a. MLESJ BOD approval will be required for all new counterparties (may be done by authorized Board member with review of full Board at quarterly meeting).
  - b. Counterparties will be submitted to ML Credit for approval – netting opinions to be obtained.
  - c. OGC to confirm netting provision for counterparty jurisdiction (note that ML Credit's approval is subject to netting opinion confirmation for all new counterparties).
  - d. Proposed economics to be reviewed.
  - e. Stock loan agreement to be executed. Counterparties must be able to effect stock lending transactions. No trading will take place until a client enters into a master stock lending agreement with MLESJ.
  - f. Counterparty to provide W8 IMY/BEN
2. MLI Swap Counterparty: each swap counterparty master agreement must be confirmed by ML Legal to contain gross-up language.
3. MLESJ Loan to Merrill Lynch over excess cash
  - a. Demand loan must have a term of less than 183 days. Loan documented with term of 180 days.
  - b. At termination of each loan (every 180 days), each successive loan will need to be to a new ML entity. If existing loan is to a US ML entity, next loan must be to a non-US ML affiliate. The loan may switch between two ML entities. Each entity must be guaranteed by ML & Co.
  - c. Initial loan was executed on August 17, 2005 with 180 day term; consequently, the first loan matures on February 13, 2006 and must be re-executed with a different non-US ML entity.
4. MLESJ Loan Facility
  - a. Overnight funding facility provided by ML & Co.
  - b. Facility size = \$1.0 billion
  - c. General MLESJ business practice will be to draw on the Loan Facility for funding needs rather than the Demand Note (described above).
5. MLESJ Board of Directors
  - a. Initial directors = Tim Beck (MLIM CI), Ian Webster (MLIM CI), Grant Hamilton (MLIM CI), and Tracy Fintor (MLIM CI). All are Jersey residents.
  - b. Any future director must be non-US. Any UK director requires approval of ML Tax department.
  - c. Directors fees are envisaged at \$10,000 p.a. per director. This will be ceded back to the relevant divisions under which the directors operate.
  - d. Board will meet quarterly; business group will provide detailed presentation of business at each meeting.
6. Service Agreements / Agents
  - a. MLIM CI: provide board members, facilities and administration support. MLESJ will enter into a formal agreement with MLIM CI for compensation to Board members and employees
  - b. Mourant: Jersey legal, finance and administration.
  - c. BONY: settlement and clearing over cash transactions.
  - d. MLI: Trade Support Agreement with regard to forward contract and stock borrows.
7. Responsibilities and Authority of MLESJ
  - a. MLESJ will have full authority over all agents and traders and will have the ability to replace or rescind any servicing agreements.

4

CONFIDENTIAL

ML-PSI-00049450

797

- b. MLESJ will have the full authority to reject trades prior to execution.
  - c. MLESJ will review all financial statements and trading summaries.
  - d. MLESJ will file annual statements to the Jersey authorities on shareholders and share capitals.
  - e. MLESJ will manage process of engaging Deloitte Touche Jersey will be hired to provide audited financials, some work may be outsourced to London D&T. MLESJ to oversee audit process
  - f. Books and records of MLESJ will be maintained jointly by MLI London (John Jack) and MLIM CI.
8. IRS for 1042/1042S; [BNY to prepare and submit on behalf of MLESJ]
9. Terms of Forward Contract between MLESJ and MLI
- a. executed on a portfolio basis;
  - b. cash settle only,
  - c. term of one year, not cancelable before 15 days (terminable thereafter at fair market value).
  - d. documented as forward contract, booked as price swap.
10. Role of Bank of New York ("BNY")
- a. clearing and settlement on MLESJ cash trading activity (stock borrow vs. short sale)
  - b. [tax compliance: form 1042/1042S]
  - c. [dividend flows – confirm with cleashy]
  - d. [intra day funding]
  - e. fee to BNY dictated by BNY's fee schedule - [subject to final negotiation]

**Trade Process Summary (Non-Exclusive Trades)**

*Note that the following references to specific MLI traders (Giles Hitchcock and Ian Bower) are for clarity only – in practice, MLI will manage the trading process and appoint individual traders at its discretion. All trading of stocks or stock baskets, forwards, and swaps will occur prior to the NY market open at the prior day's closing prices.*

*Trade processes for exclusive trades (wherein MLESJ will bid to have exclusive rights to borrow a fund's securities for extended periods (e.g., one year)) will have identical steps to the below except that the*

**A. Trade Initiation**

1. Approved Counterparty contacts Ian Bower and provides summary of proposed stock loan. Counterparty follows with email to Giles Hitchcock and MLESJ with details of portfolio and pricing.
2. Giles Hitchcock or Ian Bower contacts Rich Jessop and Paul Cipriano to determine hedge (forward contract) availability.
3. MLESJ Board or authorized Board member will be notified of potential transaction.
4. Paul and Rich attempt to locate hedge counterparty in market and, if successful, reply to Giles and MLESJ with pricing levels.
5. Unless stock loan is rejected by MLESJ Board or authorized Board member, stock loan is agreed between Ian Bower and Counterparty.
6. Ian Bower sends emails to (a) Counterparty authorizing the stock borrow and (b) Rich Jessop / Paul Cipriano authorizing the forward.
7. Giles instructs a selected "broker's broker" such as Tulletts or ICAP to sell equities short on a [principal/agent] basis. Equity portfolio is sold short through selected broker. Broker will be responsible for locating buyer. ML will have no visibility to the ultimate purchaser of the shares and will have no knowledge or way of knowing the identity of the ultimate purchaser.

5

CONFIDENTIAL

ML-PSI-00048451

8. Stock borrow and forward contract are executed. London operations, on behalf of MLESJ, will book the trades.
9. BONY, as agent to MLESJ, will handle settlement and clearance on the stock borrow against the short position.

**B. Trade Unwind after Total Return Swap lockout date**

1. Counterparty contacts Ian Bower providing notice of stock borrow unwind. Ian sends email to notify Giles, Cipriano, Jessop and MLESJ of forward contract unwind.
2. Giles instructs broker to acquire equities in the market and receives intraday funding from [BONY/ML & Co. Treasury]. ML will have no visibility to the ultimate seller of the shares and will have no knowledge or way of knowing the identity of the ultimate seller.
3. MLESJ and MLI unwind the forward contract and total return swaps.
4. BONY, as agent to MLESJ, will effect clearing and settlement of the above transactions.
5. Counterparty and MLESJ make payments under the stock borrow and Counterparty returns the cash collateral to MLESJ; MLESJ repays intraday funding.

**C. Trade Unwind before Total Return Swap lockout date**

1. Counterparty contacts Ian Bower providing notice of stock borrow unwind.
2. Ian borrows (or may instruct broker to borrow) identical equities from a market counterparty [or from a MLI]. London operations, on behalf of MLESJ, will book the trades.
3. BONY, as agent to MLESJ, will settle the borrow of equities from the market counterparty and deliver the equities to Counterparty under the stock borrow agreement.
4. Once the TRS lockout date is reached, trade unwind proceeds as detailed in B above except MLESJ returns equities to the new market counterparty on the stock borrow rather than Counterparty.

**Trade Process Summary (Exclusive Trades)**

*Exclusive trades involves competitive bids in which MLESJ will bid to have exclusive rights to borrow a fund's securities for extended periods of time (e.g., one year). MLESJ will coordinate with MLI on the pricing of the bid. If MLESJ wins a bid, the following steps may be executed at any time during the exclusive period.*

**A. Trade Initiation**

1. MLI on behalf of MLESJ will determine attractive equities to borrow. Giles Hitchcock or Ian Bower contacts Rich Jessop and Paul Cipriano to determine hedge (forward contract) availability. MLESJ Board or authorized Board member will be notified of potential transaction.
2. Paul and Rich attempt to locate hedge counterparty in market and, if successful, reply to Giles and MLESJ with pricing levels.
3. Unless stock loan is rejected by MLESJ Board or authorized Board member, stock loan is agreed between Ian Bower and Counterparty.
4. Ian Bower sends emails to (a) Counterparty authorizing the stock borrow and (b) Rich Jessop / Paul Cipriano authorizing the forward.
5. Giles instructs a selected "broker's broker" such as Tullett or ICAP to sell equities short on a [principal/agent] basis. Equity portfolio is sold short through selected broker. Broker will be responsible for locating buyer. ML will have no visibility to the ultimate purchaser of the shares and will have no knowledge or way of knowing the identity of the ultimate purchaser.
6. Stock borrow and forward contract are executed. London operations, on behalf of MLESJ, will book the trades.
7. BONY, as agent to MLESJ, will handle settlement and clearance on the stock borrow against the short position.

**B. Trade Unwind**

1. Ian sends email to notify Giles, Cipriano, Jessop and MLESJ of forward contract unwind.

<b>GMI NEW PRODUCT REVIEW</b>
-------------------------------

<b>EXECUTIVE SUMMARY</b>
--------------------------

**MEETING DATE:** October [25], 2005**PREPARER:** Peter Cross, Alan Levy

Product: Project Gemini	Product Sponsor: John Addis
Sponsoring Business Unit: Global Structured Product	Pre-Review: Regional COO Approval Discussed with: Roger Anerella  Accountable manager: Mac Taylor
Regions: US , UK , Jersey Island	Types of Trades: Stock borrow, equity swaps / forward, Equity sell / buy  Is the Product Currency Restricted? (If so, state the currency): No (USD)
Legal Entity: MLI, ML Group Inc, <u>Merrill Lynch Equity Solutions Jersey ("MLESJ")</u>	Average Life Expectancy of Trade/Instrument: Rolling 15 – 30 day trades on average
Is the Legal Entity Regulated? Yes Regulator (if yes): MLI - FSA	Expected Volumes: ( <i>i.e. trades, assets,</i> ) a) Initial \$100m: initial MLIIIF credit and board approval; b) \$300m: target full volume from MLIIIF expected within 6 months; c) \$2.0b: program total representing multiple counterparties expected within 2 years.
To Seek an Approval for: Product X    Structure    or One-Off Transaction	

Introduction

- Project Gemini is a structured transaction designed to provide yield enhancement to non-US clients of Merrill Lynch that own US dividend-paying equities.
- Target counterparties include foreign pension plans and investment funds with US equities.
- The transaction involves:
  - (1) A short sale to the market of US equities by Merrill Lynch Equity Solutions Jersey ("MLESJ"), a newly formed Jersey Island entity and subsidiary of ML Group Inc., and a stock loan from counterparty to MLESJ to cover the short position.
  - (2) A series of derivative transactions executed with the market by MLESJ and MLI designed to hedge ML market risk.
- The initial counterparty will be Merrill Lynch International Investment Fund ("MLIIF"), a MLIM SICAV fund incorporated in Luxembourg.
- Similar programs are offered by numerous Wall Street investment banks. MLIIF is currently executing these trades with several of Merrill Lynch's competitors.

<b>GMI NEW PRODUCT REVIEW</b>
-------------------------------

d. MLI: Trade Support Agreement with regard to forward contract and stock borrows.

7. Responsibilities and Authority of MLESJ

- a. MLESJ will have full authority over all agents and traders and will have the ability to replace or rescind any servicing agreements.
- b. MLESJ will have the full authority to reject trades prior to execution.
- c. MLESJ will review all financial statements and trading summaries.
- d. MLESJ will file annual statements to the Jersey authorities on shareholders and share capitals.
- e. MLESJ will manage process of engaging Deloitte Touche Jersey will be hired to provide audited financials, some work may be outsourced to London D&T. MLESJ to oversee audit process
- f. Books and records of MLESJ will be maintained jointly by (i) MLE London (John Jack) in conjunction with Business Unit Finance in respect of the company's financial records and (ii) Mourants in respect of the company secretarial records.

8. IRS form 1042/1042S: BNY to prepare and submit on behalf of MLESJ or BNY to assist ML in preparation of form on behalf of MLESJ

9. Terms of Forward Contract between MLESJ and MLI

- a. executed on a portfolio basis;
- b. cash settle only;
- c. term of one year, not cancellable before 15 days (terminable thereafter at fair market value).
- d. documented as forward contract, booked as price swap.

10. Role of Bank of New York

- a. clearing and settlement on MLESJ cash trading activity (stock borrow vs. short sale)
- b. tax compliance: form 1042/1042S
- c. intra day funding: BNY has offered daylight funding, ML Treasury to consider.
- d. fee to BNY dictated by BNY's fee schedule - [subject to final negotiation]

**Trade Process Summary (Non-Exclusive Trades)**

*Note that the following references to specific traders are for clarity only – in practice, MLI will manage the trading process and appoint individual traders at its discretion. All trading of stocks or stock baskets, forwards, and swaps will occur prior to the NY market open at the prior day's closing prices.*

Indicative traders:

MLI on behalf of MLESJ:

Stock Borrow: UK Stock Loan desk = Ian Bower

Forward Contract: UK Equity Swaps desk = Giles Hitchcock

MLI (counterparty to MLESJ on Forward Contract & Total Return Swap)

Forward Contract: US Equity Swaps desk = Paul Cipriano & Rich Jessop

<b>GMI NEW PRODUCT REVIEW</b>
-------------------------------

Total Return Swap: US Equity Swaps desk = Paul Cipriano & Rich Jessop

**A. Trade Initiation**

1. Approved Counterparty contacts Ian Bower and provides summary of proposed stock loan. Counterparty follows with email to Giles Hitchcock and MLESJ with details of portfolio and pricing.
2. Giles Hitchcock or Ian Bower contacts Rich Jessop and Paul Cipriano to determine hedge (forward contract) availability.
3. MLESJ Board or authorized Board member will be notified of potential transaction.
4. Paul and Rich attempt to locate hedge counterparty in market and, if successful, reply to Giles and MLESJ with pricing levels.
5. Unless stock loan is rejected by MLESJ Board or authorized Board member, stock loan is agreed between Ian Bower and Counterparty.
6. Ian Bower sends emails to (a) Counterparty confirming the stock borrow and (b) Rich Jessop / Paul Cipriano authorizing the forward.
7. Giles instructs a selected "broker's broker" such as Tulletts or ICAP to sell equities short on a [principal/agent] basis. Equity portfolio is sold short through selected broker. Broker will be responsible for locating buyer. ML will have no visibility to the ultimate purchaser of the shares and will have no knowledge or way of knowing the identity of the ultimate purchaser.
8. Stock borrow and forward contract are executed. London operations, on behalf of MLESJ, will book the trades.
9. BNY, as agent to MLESJ, will handle settlement and clearance on the stock borrow against the short position.

**B. Trade Unwind after Total Return Swap lockout date**

1. Counterparty contacts Ian Bower providing notice of stock borrow unwind. Ian sends email to notify Giles, Cipriano, Jessop and MLESJ of forward contract unwind.
2. Giles instructs a selected "broker's broker" such as Tulletts or ICAP to acquire equities a [principal/agent] basis and receives intraday funding from [BNY/ML & Co. Treasury]. Broker will be responsible for locating seller. ML will have no visibility to the ultimate seller of the shares and will have no knowledge or way of knowing the identity of the ultimate seller.
3. MLESJ and MLJ unwind the forward contract and total return swaps.
4. BNY, as agent to MLESJ, will effect clearing and settlement of the above transactions.
5. Counterparty and MLESJ make payments under the stock borrow and Counterparty returns the cash collateral to MLESJ; MLESJ repays intraday funding.

**C. (a) Trade Unwind before Total Return Swap lockout date**

1. Counterparty contacts Ian Bower providing notice of stock borrow unwind.
2. Ian borrows (or may instruct broker to borrow) identical equities from a market counterparty [or from MLJ]. London operations, on behalf of MLESJ, will book the trades.
3. BNY, as agent to MLESJ, will settle the borrow of equities from the market counterparty and deliver the equities to Counterparty under the stock borrow agreement.
4. Once the TRS lockout date is reached, trade unwind proceeds as detailed in B above except MLESJ returns equities to the new market counterparty on the stock borrow rather than Counterparty.

805

<b>GMI NEW PRODUCT REVIEW</b>
-------------------------------

**C. (b) Alternate Trade Unwind prior to TRS lockout date**

The following may be used if MLESJ is unable to enter into a new stock borrow (e.g., prior to execution of stock borrow agreement with separate counterparties).

1. Counterparty contacts Ian Bower providing notice of stock borrow unwind.
2. MLESJ acquires stocks to cover the borrow where MLESJ receives intraday funding from [BNY/ML & Co. Treasury].
3. MLI on behalf of MLESJ returns stocks to Counterparty. BNY handles settlement and clearing on the above trades.
4. MLIIF releases the cash collateral and MLESJ repays the intraday funding.
5. Cipriano and Jessop enter into a total return swap with MLESJ that will offset MLESJ's exposure under the Forward.
6. At the end of the lockout period, the two swaps are terminated at no net cost.

**Trade Process Summary (Exclusive Trades)**

*Exclusive trades involves competitive bids in which MLESJ will bid to have exclusive rights to borrow a fund's securities for extended periods of time (e.g., one year). MLESJ will coordinate with MLI on the pricing of the bid. Any bid will require the approval of the MLESJ board. If MLESJ wins a bid, the following steps may be executed at any time during the exclusive period.*

**A. Trade Initiation**

1. MLI on behalf of MLESJ will determine attractive equities to borrow. Giles Hitchcock or Ian Bower contacts Rich Jessop and Paul Cipriano to determine hedge (forward contract) availability. MLESJ Board or authorized Board member will be notified of potential transaction.
2. Paul and Rich attempt to locate hedge counterparty in market and, if successful, reply to Giles and MLESJ with pricing levels.
3. Unless stock loan is rejected by MLESJ Board or authorized Board member, stock loan is agreed between Ian Bower and Counterparty.
4. Ian Bower sends emails to (a) Counterparty authorizing the stock borrow and (b) Rich Jessop / Paul Cipriano authorizing the forward.
5. Giles instructs a selected "broker's broker" such as Tulletts or ICAP to sell equities short on a [principal/agent] basis. Equity portfolio is sold short through selected broker. Broker will be responsible for locating buyer. ML will have no visibility to the ultimate purchaser of the shares and will have no knowledge or way of knowing the identity of the ultimate purchaser.
6. Stock borrow and forward contract are executed. London operations, on behalf of MLESJ, will book the trades.
7. BNY, as agent to MLESJ, will handle settlement and clearance on the stock borrow against the short position.

**B,C. Trade Unwind: Same as Non-Exclusive Trades**

Are there any major control concerns?

None

<b>GMI NEW PRODUCT REVIEW</b>
-------------------------------

Are there any Pre or Post-Trading Conditions which will delay trading? *(If so, please explain):*

*Pre-Trading Conditions:*

- Final documentation to be executed (stock loan agreement with MLIF, forward contract ISDA, service agreements);
- Technology testing work to be completed;
- Finalization of Bank of New York terms of engagement (final testing, tax compliance role and fee negotiation).

*Post-Trading Conditions:*

- Compliance to review detailed flows of initial trade.
- Subject to tax limits:
  - Annual trading limit initially established at first to be reached of (a) \$50 million annual gross withholding tax elimination, and (b) \$25 million net withholding tax (=gross withholding tax less MLESJ fees). Limits will be reviewed after one year.
- Subject to Corporate Actions volume constraint during manual stage:
  - At two week intervals the desk will borrow and sell baskets of no more than 20 stocks. The dividend team can only track a maximum of 20 names at a time.
  - The initial trade will be a basket of fewer than 10 stocks.
  - Trading will be limited to MLIM funds at the start with only 5 funds participating.
  - Only cash dividends can be supported without the technology. Any other event announced on a stock requires that particular stock to be removed from the basket.
  - ADRs cannot be supported.
- ML Credit condition:
  - Business must contact credit prior to trading for each new stock loan counterparty to establish appropriate credit limits. At that time, the business must confirm if a positive netting opinion has been provided by OGC for the relevant MLESJ stock loan agreement/counterparty jurisdiction.

807

Trading Liabilities at Fair Value	400,000,000			400,000,000	
Obligation to Return Securities Received as Collateral					
Other Payables (Inter-Co)	0	600,000,000	300,000,000 **	300,000,000 *	
Liabilities in Insurance Subsidiaries					
Long-Term Borrowings	52,000,000****				
<b>TOTAL LIABILITIES</b>	452,000,000		300,000,000	700,000,000	

\*Newly formed entity will be capitalized with \$300 million of equity. The equity will be 99% redeemable thus debt for GAAP purposes and 1% pure equity. For purposes of the above I have included the entire \$300 million as an Interco Item on MLESJ and ML Group Inc.'s balance sheet.

\*\*ML Group Inc. will borrow \$300 million from ML&CO to fund its investment in MLESJ.

\*\*\*MLESJ will lend excess cash to ML Affiliates as determined to be appropriate by ML Tax Group

\*\*\*\*Represents ML&CO's true funding requirement.

\*\*\*\*\*MLI will have matched derivative contracts on its books, i.e. forward against MLESJ, and a TRS versus the street. Initial notional amount expected to be \$400 million on both derivative contracts.

**EXECUTIVE SUMMARY**

**Netting Agreements:**

What legal and netting agreement(s) will be signed in accordance with this product? (e.g., ISDA, Bond Market Association Agreement (BMA), etc.)	ISDA & Master Securities Loan Agreement
Is there a valid netting opinion?	Yes

**PRODUCT OVERVIEW**

Proposed start date: 11/5/2005

810

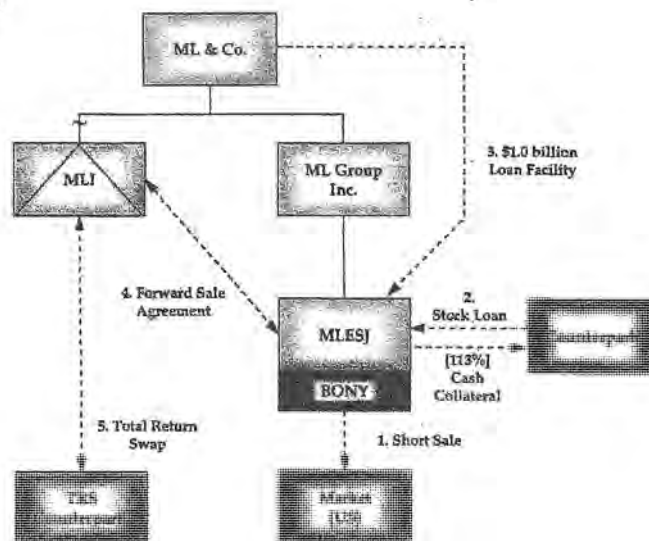

Market size (\$):	>\$10 billion
Existing market participants:	Majority of major Wall Street firms
Legal entity where trades booked:	MLI / ML Group Inc. / MLESJ
Does trade flow through a regulated entity:	Yes: MLI
Traders - Physical location:	London, New York
- Legal entity:	MLI, MLESJ
Sales Force - Physical location:	New York/London
- Legal entity:	MLPF&S/MLI
Any Agency agreement?	No
Initial counterparties:	MLIIF (a MLIM Luxembourg SICAV fund)
Counterparties - location:	Luxembourg (initial)
Counterparties - business area / type:	Investment funds, pension funds, other international funds holding US equities.
Counterparties - other examples:	
Other required authorisations obtained?	Completed: SPC, CSOC
<b>PROJECTED RETURNS, TRADING VOLUMES, INVENTORY</b>	
Year 1 Trading volumes - Value (\$):	a) Initial \$100m: initial MLIIF credit and board approval; b) \$300m: target full volume from MLIIF expected within 6 months;
Trading Volumes - Number of trades per day:	Initial limit: max 20 stocks traded at once, for exp period of 2 weeks.
Type of transaction flow -Agency %	0%
-Proprietary %	100%
Inventory - Proprietary position:	100%
Customer "hold" positions:	NA
Impact on ML&Co - Estimated Year 1 net revenue (\$):	\$250k 2005, \$10m 2006
Year 1 - Estimated market share (%):	<10%
Currency mix - highlighting any convertibility issues:	NA - All USD
<b>TRADE / TRANSACTION FLOW</b>	
How are trades slated?	Stock Borrowers in Janus, Shorts and Derivatives in RAM
Trade settlement details:	Regular way
Custodian bank / location:	BNY / NY & London
Paying agent / location:	NA
Broker / location:	NA

ML-PSI-0329

**TRANSACTION DIAGRAM**

Please insert a flow chart/diagram detailing the transaction structure of the new product.

**Summary Diagram**

1. Merrill Lynch Equity Solutions Jersey Limited ("MLESJ"), a newly established Jersey Island corporation and subsidiary of ML Group Inc., will sell short US equity securities to the market.
2. In order to fill its short position, MLESJ will borrow the US equity securities from Counterparty and MLESJ will post [113%] cash collateral. Counterparty will invest the collateral received into money market funds.
3. ML & Co. has provided MLESJ with a \$1.0 billion financing facility for ongoing collateral true-ups for mark to market volatility.
4. MLESJ enters into a forward contract over the securities with MLJ to hedge its exposure.
5. MLJ enters into a total return swap with a market counterparty to hedge its exposure.

812

Capitalization of MLESJ (completed on August 17, 2004)

1. ML Group Inc., a wholly owned subsidiary of ML & Co, borrowed \$300 million from ML & Co.
2. ML Group Inc. contributed the \$300 million to MLESJ in exchange for equity.  
Note that 99% of the shares of MLESJ are redeemable after 20 years.
3. MLESJ lent the \$300 million to ML & Co in the form of a demand note. The demand note has a term of 180 days and will periodically be re-executed with ML & Co., or an affiliate guaranteed by ML & Co. Each successive loan will need to be to a new ML entity (but may switch between two entities).
4. On August 19, MLESJ entered into a credit facility with ML & Co. under which MLESJ can borrow amounts up to \$1.0 billion upon one day notice.

813

ALL QUESTIONS IN THIS SECTION MUST BE ADDRESSED:  
GLOBAL MARKETS AND INVESTMENT BANKING-NEW PRODUCT REVIEW COMMITTEE  
CONTROL TEMPLATE

FUNCTIONAL AREA	YES/NO	REMARKS
<b>Market Risk Management</b> <b>DISCUSSED WITH: Zahid Naseem</b>		
1. Please describe the proposed transaction or product and all involved counterparties.		Stock loan and associated forward agreement with SICAV fund. Plus inter-entity back to back equity swaps.
2. Is this product currently traded in a different region or by a different business unit at Merrill Lynch?		Similar product for different entity has been traded in EMEA.
3. Is the product new to the market? Who are ML's competitors? What would be the consequences of ceasing activity in this new product?		Product currently offered by other Stock Loan desks.
4. Which trading desk will be responsible for risk managing this product?		Trade booked in GEF Swaps and Stock Loan.
5. Is the product subject to specific external regulation? Provide details?		Standard stock loan and swap rules.
6. Which legal entities will this product use?		MLI and new MLESJ
7. What trading book (s) will be used for the booking process?		New books opened in RAM and Janus.
8. In which trading system will these transactions be booked?		Swaps, forward and short sale in RAM, stock loan in Janus.
9. How will required market risk data be generated and fed to Scenarios? Will any of the processes be manual? If yes, provide details. Will Scenarios data be sent in timely (T+1)?		All automated feeds from RAM
10. How will the Scenarios data sent to risk be reconciled? Who will be responsible for this process?		Standard RAM feeds and reconciliation process.
11. Describe the valuation methodology used in calculating market and risk data. List all the models used for valuation. Has risk management reviewed and approved the models?		Standard RAM models.
12. List all inputs for valuation purposes and describe the sources for these data. Please highlight any parameters that require estimation (i.e. are not market observable) and how this estimation will be done?		Standard RAM inputs from exchange
13. Describe all market risks associated with the product, any hedging techniques, key assumptions, the liquidity of the product and any associated hedges. Please highlight any risks that cannot be hedged and any risk concentrations.		Trade is back to back – no significant market risk.
14. Do any entity/regional specific limits apply?	No	
15. Is each of market risks associated with this product constrained by desk operational limits? How are these limit monitored? What is the process for reporting these risks vs. limits on a daily basis and who is responsible?	Yes	Corporate actions volume limits during manual periods.
16. Quantify and/or assess the possible worst case scenario for ML and for our counterparties? Please quantify with an example.		Worst case would be no enhanced return from trade – ML would lose cost of its bid – this is a sunk cost.

ALL QUESTIONS IN THIS SECTION MUST BE ADDRESSED:  
GLOBAL MARKETS AND INVESTMENT BANKING-NEW PRODUCT REVIEW COMMITTEE  
CONTROL TEMPLATE

FUNCTIONAL AREA	YES/NO	REMARKS
<b>Credit Risk Management</b> <b>DISCUSSED WITH: Richard Restaino, Tony Dawson</b>		
1. Who will be the typical counterparties? Are there any new or existing clients? What ratings are anticipated?		Counterparties on the Total Return Swap (TRS) will be banks and other financial institutions with which MLI presently trades. Other mutual and pension funds from which we will borrow stock may be new or existing clients.
2. Have all counterparty credit limits, if applicable been approved?		Limits will be set by credit for new counterparties.
3. What credit terms are expected for this product?		On the stock borrow, ML will post cash collateral to the client fund. Credit terms on the TRS will be set as for any other TRS (TRS is not a new product).
4. In which countries/industries will the product be targeted?		Initially, European and American mutual and pension funds.
5. Are there aspects of this product, such as the client requiring financing, that will result in additional credit risk?	No	
6. What system will this product be traded on?		The TRS will be booked in RAM. The short sale will also be booked in RAM. The stock borrow will be booked in Janus. The intercompany forward will be booked in RAM.
7. Will there be an automated daily feed to Credit?	Yes	All components will be booked in systems with existing feeds to GLACIER. (see #6).
8. Will the data feed the credit system in compliance with Credit's minimum data standards?	Yes	
9. Will there be any inventory exposure as a result of this new product?	No	
10. Has Credit approved a potential exposure calculation for this product?	Yes	Potential Exposure (PE) calculations are already in place for both the TRS and stock borrows.
11. Will Credit be receiving sufficient data to calculate potential exposure correctly (i.e., all attributes used in pricing the transaction)?	Yes	
12. How will the potential exposure calculation be implemented systematically in the credit system?		Automated Potential Exposure (PE) calculations are already in place for both the TRS and stock borrows.

816

ALL QUESTIONS IN THIS SECTION MUST BE ADDRESSED:  
GLOBAL MARKETS AND INVESTMENT BANKING-NEW PRODUCT REVIEW COMMITTEE  
CONTROL TEMPLATE

FUNCTIONAL AREA	YES/NO	REMARKS
13. Will all credit terms be supported by Operations? Will all collateral be marked daily and fed to CXS/ICE?	Yes	
14. Has a daily feed to Collateral Management been established with approved pricing sources?	Yes	
15. Is this product in full compliance with existing credit policy? If not, has a change to or exemption from existing credit policy been authorized?	Yes	
16. Are there any remaining open Credit issues?	No	
17. Does Credit require additional headcount?	No	
18. Do current Credit Risk policy/procedures/control manuals adequately describe all processes required to support and control this new product?	Yes	Credit policies are currently in place for all individual components of the structure.
<u>Other Comments:</u>  Business must contact credit prior to trading for each new stock loan counterparty to establish appropriate credit limits. At that time, the business must confirm if a positive netting opinion has been provided by OGC for the relevant MLESJ stock loan agreement/counterparty jurisdiction.

GLOBAL MARKETS AND INVESTMENT BANKING-NEW PRODUCT REVIEW COMMITTEE  
CONTROL TEMPLATE

FUNCTIONAL AREA	YES/NO	REMARKS
<b>Taxation</b>		
<b>DISCUSSED WITH: Larry Klieuman/ Nizam Siddiq</b>		
1. Are there potential cross border issues?		No.
2. Is there risk of an unwanted permanent establishment?		No.
3. How will the product be treated for tax purposes? Have any tax opinions from outside counsel been solicited or received?		Yes (King & Spalding initial memo received, final opinion expected shortly)
4. Which Merrill Lynch legal entity will issue or hold this product?		MLESJ, MLI
5. U.S. Tax Shelter Regulations:		
(a) Will Merrill Lynch be required to register the product with the U.S. IRS as a Tax Shelter? Have all engagement letters, term sheets and presentation materials sent to clients included a statement to the effect that the transaction presented is not confidential?		No.
(b) Will Merrill Lynch be required to maintain a list of investors in the product pursuant to the U.S. Tax Shelter regulations?		No.
(c) Will Merrill Lynch be required to disclose the transaction pursuant to the U.S. tax shelter regulations?		No.
(d) Will outside counsel opinion address the requirements under the tax shelter regulations?		No.
6. Will this transaction require Special and Structured Product Committee (SSPC) and/or Structured Products Committee (SPC) review? If so, has the SSPC and/or SPC review been scheduled or approval received?		SPC approval attained
7. Will this transaction require disclosure to any tax authority under any Tax Avoidance Disclosure rules? If so, has the Global Tax Compliance & Analytics group been notified?		No.
8. In what legal entity, country and business unit will the P&L and Balance Sheet from this product be recorded for GAAP and FMR? Is this consistent with our current transfer pricing methodology? Is adequate transfer pricing documentation in place, and are transfer pricing arrangements covered by existing service fee agreements? Are any new service fee agreements required?		MLI, MLESJ Global Equity Finance (USSPBU) Jersey & London  Intercompany service and trade support agreements.
9. How will this product be hedged and where will the hedges be recorded?		Short sale, Forwards and Total Return Swaps.
10. Does the product have any embedded debt elements? Are there any off-balance sheet assets or liabilities?		No. Yes (2 cash settled derivatives: forward and total return swap).

18

ML-PSI-0336

FUNCTIONAL AREA	YES/NO	REMARKS
11. What is the statutory tax rate of the legal booking entity that has been used to measure profitability of this product?		30% MLI 39% MLESJ
12. Will the product be integrated into our existing tax reporting system? If not, who will perform the appropriate tax reporting?		No. Procedures must be made to complete Forms 1042 and 1042S for MLESJ. Currently discussing with BNY tax team.
13. Are there any withholding taxes (foreign or domestic) relating to this product? If yes –		
a) Will Merrill Lynch be responsible for withholding taxes on payments made to customers? If yes –		No.
(i) Has the firm obtained the appropriate forms/ representations to ensure that withholding taxes are minimized?		
(ii) Will Merrill Lynch be responsible for a tax "gross up" payment to the extent that withholding taxes are subsequently imposed by a taxing authority?		
(iii) Does the issuer have the ability to terminate or transfer/ assign the position for any tax event?		
(iv) Whose responsibility (which parties or departments) is it to deduct, pay over and report withholding taxes?		
b) Will Merrill Lynch be receiving payments subject to withholding taxes? If yes –		No.
(i) What type of withholding taxes (dividend, fee, interest, etc.)?		
(ii) What assumptions were made with regards to the ability to claim a credit for these taxes? Is profitability dependent on the ability to claim credits?		
(iii) Have efforts been made to minimise the impact of withholding taxes or obtain a "gross-up" from the counterparty?		
14. Are there any foreign or domestic transaction taxes (e.g. VAT, Stamp Duty or Insurance Premium Tax) relating to This product? If so, have efforts been made to minimize the impact of the transaction taxes or obtain a "gross-up" from the counterparty?		No.
15. Are there any special tax compliance aspects to this product? What arrangements have been made to ensure that they will be satisfied?		See #12: IRS form 1042 to be completed periodically.
16. What is the VAT liability of the services arising from this product? Will there be any related service fees? If so, what is the VAT Treatment?		None.
<b>Other Comments:</b> Annual trading limit initially established at first to be reached of (a) \$50 million annual gross withholding tax elimination, and (b) \$25 million net withholding tax (=gross withholding tax less MLESJ fees). Limits will be reviewed after one year.

CONTROL TEMPLATE

FUNCTIONAL AREA	YES/NO	REMARKS
<b>Legal</b> <b>DISCUSSED WITH: Joe Hamilton, Sarah Evans, Martin Sandler, John McGreevy</b>		
1. Has all documentation including confirmation templates been approved by Legal?	Yes	Subject to standard tax gross-up provisions in the Master ISDA agreement for the total return swaps (TRS's). Documentation should be standard total return swap documents.
2. Have Master Agreements been signed?		The ISDA Master Agreement for the forward transaction between MLI and the MLSJ expected to be executed shortly.  Master Security Lending agreements to be signed with counterparties prior to engaging in stock borrow transactions. OSLA between MLESJ and MLIIIF in final stages of negotiation.
3. Is a pledge required? If so, is it executed?	Yes	Documented under the Master Securities Lending Agreement
4. What system will be used to track legal documentation?		DOC.CCARS
5. Does required compliance information exist?	Yes	See Question 9 in the compliance section
6. Have all legal issues been resolved?	Yes	
7. Have all relevant netting agreements been obtained?	Yes	Netting opinions required for each new jurisdiction.
8. Will additional headcount be needed?	No	
9. What attorney is responsible for this product (Is outside counsel used, if so what for and what review will inside counsel perform)?		Sarah Evans, Joe Hamilton, Martin Sandler and John McGreevy King & Spalding is outside counsel
10. Are there special licensing or registration issues required to sell this product?	No	
11. Patent protection should be explored for all newly offered New Products. Consider your New Product in relation to comparable existing products/services offered. Is your product novel and/or innovative? Is it offered in a way that is novel and/or innovative? If yes, please contact Jill Gaffney.	No	
12. Do current Legal policy/procedures/control manuals adequately describe all processes required to support and control this new product?	Yes	
<u>Other Comments</u>		

820

ALL QUESTIONS IN THIS SECTION MUST BE ADDRESSED:  
GLOBAL MARKETS AND INVESTMENT BANKING-NEW PRODUCT REVIEW COMMITTEE  
CONTROL TEMPLATE

FUNCTIONAL AREA	YES/NO	REMARKS
<b>Compliance</b> <b>DISCUSSED WITH: Lauri Scoran, Lesley Kumar</b>		
1. What Regulatory bodies govern this product / business?		CSE - US derivatives transactions. US SRO's -cash equity short sales. FSA - various MLI activities.
2. Are there specific regulatory concerns & issues?		None noted at this time
3. Specific ML legal entities required? Cross-border requirements?	Yes	Detailed in transaction diagram.
4. What region will clients/counterparties reside?		All non-US counterparties
5. Will there be a specific U.S. PATRIOT Act requirements?		Regional specific anti money-laundering procedures will apply to all counterparties
6. Are there specific local requirements and marketing restrictions? Registrations?		None
7. Specific client qualifications?		Institutional investors and market counterparties as a defined term
8. Specific trading and booking requirements?		MLJESJ cash equity transactions cannot be reflected on MLPFS books and records
9. Are the transactions processed in a manner such that the transactions are available for internal compliance monitoring?		Compliance will review technology enhancements upon completion***
10. Additional educational and training requirements?		No additional training requirements noted at this time
11. Please describe the supervisory process including, interim/tactical/strategic procedures?		The Service Agreement between MLI and MLJES details authorized activities and required controls. There are no additional supervisory controls required
12. Compliance Officer assigned?		Lauri Scoran - US Lesley Kumar - MLI
13. Have all compliance issues been resolved?		See below
14. Do Compliance current policy/procedures/control manuals adequately describe all processes required to support and control this new product?		MLI policies and procedures adequately support this new product.
<u>Other Comments</u>		
**** As all technology enhancements are being reviewed in a "test" environment, GMI Compliance requires notification when the first transactions is executed to test that books and records of MLPFS are not affected.

CONTROL TEMPLATE

FUNCTIONAL AREA	YES/NO	REMARKS
<b>Integrated Support Services ("ISS")</b> <b>DISCUSSED WITH: Ted Campbell/ Simon Thompson,</b> <b>Kevin Martin, Rob Caggiano</b>		
<b>General</b>		
1. Are there incremental resource requirements to support this product? Does this new product require additional headcount?	No	
2. Does this product utilize an SPE? Is the SPE part of the SPE program? If an SPE is involved, then it must be included in the SPE database. Further information on SPEs is available at <a href="http://mlfinnet.dats.ml.com:3777/ols/portal30/ur/page/SPENTITIES">http://mlfinnet.dats.ml.com:3777/ols/portal30/ur/page/SPENTITIES</a>	No	
3. Will GT&CS settle this new product transaction? If yes, responsible GT&CS Group needs to complete the GT&CS Section.	Yes	
4. Does the product involve transactions that are reportable to a Regulator? If Yes, which system and who will deliver the transaction reports? What controls will be used to ensure the accuracy and completeness of reports to Regulator?	Yes	MLI - As existing business MLESJ - Jersey annual filings completed by Maurant (local admin. agent to MLESJ)
<b>Risk and Control</b>		
5. Has the process flow been documented and have the key control points within ISS been established.	Yes	See appendix
6. Will there be straight through processing from the trading system through operations to the general ledger. If not, what manual intervention is necessary?	Yes	Dividends processed manually until CAPS build (planned end of Q1'06) - TCS will set volume limits
7. If manual intervention, Will ISS impose any transaction or volume limits? If so, state these are daily or cumulative limits.	Yes	See above - limits are for daily volume
8. Are all ISS process and accounting procedures in place to handle the product? - Daily P&L flash reporting and P/L Explain - Estimate to actual reconciliation - G/L account ownership reconciliation	Yes Yes Yes	
9. Have all G/L accounts been established and ownership assigned? And in what Oracle general ledger account (provide account number)?	Yes	
10. Does this product need a new trading book? If so, what will be the profile of the Book (Hedge or Naked Inventory)? What data feeds will be required for this new book (CAMS, RISK)?  If the product requires new trading books, will these be set up in the Book Map database (linking trading books to ledger accounts)?	Yes  Yes	MLI Book feeds as normal from RAM. MLESJ Book - MLI process (EBAR) cloned. All feeds replicated & UAT'd
11. How will the feeds to Credit and Collateral be completed? What will be the process to make sure that they are reconciled and balanced?  Does this information also feed Market Risk scenarios?	  Yes	Via RAM Same feeds to Glacier & CAMS as used in BUCS
12. Where will the hedges for this product be recorded? (Systems and entities)		RAM - MLI & MLESJ
13. Are there procedures or controls in place to check that on a regular basis there will be no operational breaks or unmatched fails with respect to the new product?	Yes	Daily fails reporting in TCS See control rec's in appendix

FUNCTIONAL AREA	YES/NO	REMARKS
<b>Transaction &amp; Custody Services ("TCS")</b> <b>DISCUSSED WITH: Marie Russo, Patrice Bleach,</b> <b>Pilar Jimenez, Barry Clements</b>		
<b>Trade Processing</b>		
1. How will the product settle? Will local settlement agent be used?	Yes	Bank of New York will be the custodian for this activity.
2. Are there any Depot Management changes to be considered?	No	
3. Does the product have any non-standard settlement attributes (i.e. calculations)?	No	
4. Will there be Straight-Through Processing from the Trading Systems through TCS systems to the General Ledger? If not, what manual intervention is necessary?	Yes	Swift messaging to/from BNY. STP for both instructions being sent and confirms back to ML
<b>Custody</b>		
5. Are there any unusual interest/redemption requirements for Reorg. and Dividends?	NO	
6. Will there be Straight-Through Processing from the TCS Systems to the Trading Systems and the General Ledger? If not, what manual intervention is necessary?	No	The dividend booking process will be manual until the proper automation is in place
7. Is Operations responsible for retrieving tax receipts? If not, specify who is.	No	The dividend process will not require the retrieval of tax receipts
8. Will an outside Custodian/Trustee be needed? Has the required due diligence and service level been agreed by ISS and TCS?	Yes.	BNY
9. Will there be any discretionary Corporate Actions? If so, how will they be processed?	No	
10. Has provisioning been considered for long term reserves?	No	Trades are expected to be 2 week duration
11. Is TCS required to act as Custodian? If so, can the assets be Re-Hypothecated?	No	BNY is acting as custodian
<b>Client Money/Asset Segregation</b>		
12. Have requirements been reviewed to ensure there is adequate reporting of client assets for segregation purposes?	N/A	No clients in this transaction.
<b>General</b>		
13. Will there be any new reconciliations for TCS? If so, are they to be included in the normal Reconciliation reporting process?	Yes	BNY will send cash movements/balances and securities movements/balances (MT535, MT536, and MT940/950). Reconciliations have been put in place in RECON to balance these statements versus MLESJ's books and records in EBAR
14. Will the Unit Charging cost allocation methodology be utilized for the New Product? Have any incremental hires been included in the unit charge calculation?		As normal
15. Are there sufficient Disaster Recovery Procedures in place to handle this New Product?	Yes	Covered under existing systems and procedures.
<b>Client/Product Data</b>		

825

ALL QUESTIONS IN THIS SECTION MUST BE ADDRESSED:  
GLOBAL MARKETS AND INVESTMENT BANKING-NEW PRODUCT REVIEW COMMITTEE  
CONTROL TEMPLATE

FUNCTIONAL AREA	YES/NO	REMARKS
16. Where will the product data reside? Will the product require different indicative data information from that currently available in the existing databases (e.g., SMDB, S3D, STS)? What systems will this product data need to be distributed to, and who will be responsible for setting up the data and monitoring its distribution?		Trader will be responsible for setting up swap in RAM, same as current process. Activity will not require a ML Security #. Data will flow STP from RAM to EBAR. Janus will require underlying equity data from S3D via PME, same as current process. PDS is responsible for data in S3D and PME.
17. Can sufficient documentation be obtained from the client and third party sources to verify the clients' details and perform the required regulatory checks (e.g. money laundering)? Who will be responsible for setting up new clients at the legal entity level? Who will be responsible for setting up new clients at the fund / account level? Will all new clients (entities and funds) carry CoPeR identifiers?	Yes	MLESJ new counterparties to follow standard account opening procedures.
<b>Other</b>		
18. Do TCS current policy/procedures/control manuals adequately describe all processes required to support and control this new product?	Yes	Procedures and controls as per attached controls summary. Settlement procedures to be finalized with BNY.
<u>Other Comments</u> Corporate Actions: Volume restrictions will be in place until the CAPS build is completed in Q1/2 of 2006. Any other Corporate Action event outside of Cash Dividends will be unwound immediately by the trading desk.

FUNCTIONAL AREA	YES/NO	REMARKS
<b>Treasury</b> DISCUSSED WITH: Lee Whitley/Anjali Bhattacharjee		
<b>Funding &amp; Liquidity</b>		
1. What is the estimated range amount of funding required? Please note relevant currency(s).		\$300 mm equity investment in MLESJ. All other funding requirements, other than intraday funding from ML Group to extinguish short sale, are self-funded. Intraday funding is \$400mm in example, but could be as high as \$2.5 bb (total program size). Expected term of trades: 15-30 days. All figures in US\$.
2. How much funding will be provided by: (a) Treasury, (b) the secured markets, (c) deposits, and/or (d) other (please explain)?		
3. What is the likely term of any assets booked? What is the expected holding period of such assets? What is the exit strategy (e.g., sell, securitize, etc.)?		
4. Will this proposal generate cash?	No	
5. Will any specific financing pricing be required?	No	
6. If Treasury funding is required, have intercompany loan accounts been arranged?	Yes	\$300mm Demand Note and \$1.0b Credit Facility with ML&Co. have been established.
7. Does this proposal commit Merrill Lynch to provide any funding at a future date? If so, please describe in detail.	No	
8. Will ML need to issue product specific liabilities (e.g., structured notes)?	No	
9. Are there any open issues related to the incorporation of the business/product into Treasury's systems or forecasting processes? Please describe intended cash forecasting process.	No	
10. For ML Banking entities, are there any 23A or 23B issues precluding certain affiliate transactions?	No	
<b>Credit Enhancement</b>

ALL QUESTIONS IN THIS SECTION MUST BE ADDRESSED:  
GLOBAL MARKETS AND INVESTMENT BANKING-NEW PRODUCT REVIEW COMMITTEE  
CONTROL TEMPLATE

FUNCTIONAL AREA	YES/NO	REMARKS
11. Is there anything about this product/transaction that is linked to ML&Co. credit either directly (by providing a guarantee) or indirectly (through rating triggers, cross defaults, etc)? If so, please describe in detail.	No	
12. Will collateral be required to support any activities associated with the initiative? Will any collateral be received as a result of this initiative? If so, can it be rehypothecated? Please describe the type of collateral pledged to/from ML.	Yes	Cash will be posted by MLESJ to collateralize the stock loan from MLIF. No collateral to be received.
13. Will this product require a new ML&Co. guarantee? If so, please contact Treasury regarding approval under ML's guarantee policy (3.09).	No	
<b>Financial Statements and Notes</b>		
14. Can this proposal be handled within GM's existing balance sheet limits?	Yes	
15. Are there any special disclosure requirements in ML&Co.'s financial statements, or in the footnotes, as result of this new product (e.g., SPEs, credit triggers, guarantees)?	No	
<b>Subsidiary Capital Planning</b>		
16. Which existing legal entities are impacted? Will any new entities be required? Will they be consolidated?	Yes	Impacted entities: ML Group, ML, ML&Co. New consolidated entity required: MLESJ.
17. Are there any intercompany transactions? Please describe.	Yes	Equity investment (ML Group /MLESJ.) Temporary cash loan (MLESJ/ML&Co.) Credit Facility (ML&Co./MLESJ) Forward Contract (ML/MLESJ.)
18. On the margin, does this product require subsidiary capital? Regulatory capital (regulated entity) or legal capital (unregulated entity)?	Yes	Minimal incremental reg capital in ML1 to support mark on total return swap and forward contract as trades expected to have term of 15-30 days.
<b>ML Risk Equity</b>		
19. Can MLRE be calculated using Corporate Risk Management's event risk analysis (market risk) and credit capital model (default risk)? If not, how will MLRE be determined?	Yes	
<b>Insurance</b>		

828

CONTROL TEMPLATE

FUNCTIONAL AREA	YES/NO	REMARKS
20. Will any non-ML employee serve on the board of a legal entity where ML has an ownership interest? Will any ML employee serve on the board of a non-ML entity? If so, have D&O insurance issues been addressed?	No	
<b>FX</b>		
21. If applicable, has the FX hedging strategy been mapped out and all execution issues resolved? Have all booking and risk reporting issues related to the hedging activity been resolved?	NA	
<b>Banking &amp; Operations Impact</b>		
22. Will any bank services be purchased (e.g., trust, custody, tri-party, cash management functions, etc.)?	Yes	BNY custody, clearing and cash management.
23. Will this require new external bank or custodian accounts? Who has the authority to operate the new external bank accounts?	Yes	Noreen O'Hanlon et al.
24. Is any intra-day credit or overnight bank credit required?	Yes	Intraday credit from ML&Co. to fund reversal of short sale. US\$400 million in example, but could be higher. Also discussing economics of daylight funding with BNY.
25. Are there any other external credit requirements (e.g. letters of credit)?	No	
<b>Other</b>		
26. Do Treasury current policy/procedures/control manuals adequately describe all processes required to support and control this new product?	Yes	
<b>Other Comments</b>		

829

ALL QUESTIONS IN THIS SECTION MUST BE ADDRESSED:  
GLOBAL MARKETS AND INVESTMENT BANKING-NEW PRODUCT REVIEW COMMITTEE  
CONTROL TEMPLATE

FUNCTIONAL AREA	YES/NO	REMARKS
<b>Regulatory Reporting</b> <b>DISCUSSED WITH: Martin Abbott/Richard Groves/Mike Cahill</b>		
1. Does required regulatory information exist for inclusion in ML's regulatory filings?	Yes	
2. Are there automated data feeds to Regulatory Reporting?	Yes	
3. Have all regulatory capital and reporting issues been agreed with Regulatory Reporting?	Yes	
4. What legal entity(s) will this product be booked on? Will there be any remote booking? Is the entity authorised for this activity?		MLI will be used for TRS/Forward. Remote Booking guidelines will apply
5. Are any Regulatory approvals required?	No	
6. Will this product be excluded from the scope of any VAR-based reporting? If so, has Regulatory approved the justification for exclusion, and any compensating controls required?	No	
7. Will the introduction of this product necessitate pre-notification to regulators?	No	
8. What is the anticipated Regulatory Capital usage of the new product for ML&Co., as well as for each legal entity where this product is booked? What is the basis for the calculation of this regulatory capital charge for ML&Co. and for each legal entity for which regulatory capital is required?		MLI will be market risk flat. This proposal will therefore only attract regulatory capital in respect of counterparty credit risk. Assuming maximum aggregate notional of \$1bn, reg cap would be less than \$15m.
9. Have all initial and ongoing filing requirements, that are to be met as a result of any new exchange memberships or similar organizations, been addressed.	n/a

<b>Technology</b> <b>DISCUSSED WITH: Mark Taylor &amp; Jay Danziger / Gulzar Patel</b>		
1. Understanding of requirements and impact on Technology a) Has Technology received sufficient information in respect of the new product to be able to determine the impact on current Technology applications, connectivity, support levels and capacity requirements?	Yes	Design document provided to all tech teams impacted by change with a detailed build list agreed.
b) Has a volume (to be provided by the business) / capacity (to be calculated by technology) projection for the anticipated workload over the next two years been prepared?	Yes	volumes being under 50 Baskets a month, which each technology team has individually assessed any workload impact.
2. Applicability of this section of the NPR a) Does this new product require: ▪ New Technology applications or enhancements? ▪ New Technology equipment or capacity? ▪ New or modified links to internal or external systems, clients counter-parties or exchanges? ▪ New or increased usage of Global Technology & Services? ▪ New or enhanced business continuity, contingency & recovery or information security arrangements?	Yes No Yes	Enhancements to accommodate new entity Existing infrastructure Modified internal interfaces between system to process new entity data
b) Does this product delay the retirement of any applications?	Yes	Somewhat increased usage in terms of maintaining new entity
c) Does this new product require Technology investment/ project costs or incremental ongoing Technology costs?	No	All existing platforms
If the answer is NO to all of Questions 2 (a) to (c) then questions three through to eleven within the Technology section of the NPR checklist do not need to be completed	No Yes	Total cost of delivering the change across all systems is \$382,900. No incremental ongoing cost as part of existing structure
3. Application developments and enhancements a) What is the planned release date for the new applications/ modifications for this product?		5th Nov 2005
b) Are future developments/ enhancements planned?	Yes	Automated CAPS feed to process dividend payments, Manual process in Place till Feb 06
c) What, if any, information will be maintained off line or in note or comments fields in the applications?		
d) Are there any known system limitations or required manual workarounds and have these limitations been explained to the users and signed off by them?	n/a	
e) Are there any additional training implications of the Technology changes and is this training planned?	No	
f) Has approval been obtained from change management?	No	All existing users of the technology
	No	PRR In place ready for approval based on UAT sign off

8. Testing		
a) Is there a documented test plan?	Yes	UAT Pack sent to all business users required for testing and sign off agreed 26 <sup>th</sup> Sept
b) Is testing complete? If so what are the results, if not when is it due to be completed?	No	Due to complete UAT by 21 <sup>st</sup> October
c) Has integration testing been performed and, where necessary, does it include end to end testing with third parties e.g. clearing and exchange systems?	Yes	Integration testing complete 30 <sup>th</sup> Sept. BNY custodian testing 14 <sup>th</sup> – 19 <sup>th</sup> October
d) Was load testing required?	Yes	Performance testing in EBAR scheduled 26 <sup>th</sup> – 28 <sup>th</sup> October
e) Which users are signing off on the UAT?	Yes	Sign –off by each business area manager in charge of testing
f) What is the planned end date for UAT?	Yes	21 <sup>st</sup> September
g) Have any critical bugs/limitations been identified?	No	All bugs been resolved
h) Are there any outstanding issues?	No	
9. Business Continuity Planning and Contingency and Recovery		
a) Has a criticality assessment been made of the applications required to process trade, risk manage and settle this product?	No	See Table below
b) Where are the production and DR systems located?		
c) Where are the production and back up data stored?		
d) When were the DR arrangements re these critical applications and data storage last tested?		
e) Have the BCP and C&R arrangements for this product been documented and agreed with the Business?	No	
f) Have any shortfalls in BCP and C&R arrangements been explained to and accepted by the Business?	No	
10. Information security		
a) Does the new product/system meet the minimum security control guidelines contained in the Merrill Lynch & Co., Inc. Information Protection Standards (details at <a href="http://mlisp.worldnet.ml.com/policies_procedures/isp.htm">http://mlisp.worldnet.ml.com/policies_procedures/isp.htm</a> )?	Yes	Architecture is all standard equities for new entity
b) Does the product have any external connectivity requirements? If so, have any firewall requirements been discussed with Information Security?	No	
c) Have security administration activities of the product been discussed with the Security Admin. Group?	No

CONFIDENTIAL

Americas Equity Derivatives Sales & Structured Marketing  
New Product & Trade Development

## 2005 Analysis

## State of the Industry

- **The business has two major segments.** Client Solutions and Proprietary Trading. Competitive landscape: Client Solutions – MS, Lehman, DB, BofA. Proprietary Trading – BarCap, BofA, DB, MS, Lehman and others are active in the market.
- **Trendy/unexploited domestic and cross-border opportunities (or ML, cross-border yield enhancement and arbitrage are areas where ML has not previously focused within equities.** Active client base includes corporates, mutual funds, banks, and hedge funds.
- **Maximization of on-shore and off-shore hedge fund space creates large pool of high-volume clients focused on sophisticated and other structured products as a new asset class.**
- **Proprietary trading strategies (such as DSD capture) are highly lucrative opportunity for ML.** BofA and Lehman each realized pre-tax equivalent revenue of greater than \$100mm from DSD capture transactions in 2005.

## State of the ML Business

- Mid-year start-up in 2005 with long lead-time products. 2005 revenue of approximately \$504,000.
- Executed 18 transactions with 12 clients in 2005 (9 hedge funds, 1 bank, 1 private fund, 1 personal holding company).
  - 15 of 18 trades were dividend yield enhancement
- 13 financial products approved for marketing in 2005, 8 products executed
  - 4 of 13 approved transaction were dividend yield enhancement
  - 3 of 8 products executed were dividend yield enhancement
- Managed global equity balance sheet initiative including development of new trading strategies.
- Developed and implemented Project Genesis, a yield enhancement program for non-US investors. Program commenced trading Nov. 1<sup>st</sup> - 2006 expected global revenue of \$10mm (2007 revenue of \$18-20mm).
- Generated and implemented 2006 strategy to increase revenue and diversify beyond with little correlation to traditional equity businesses.

**CONFIDENTIAL**

CONFIDENTIAL

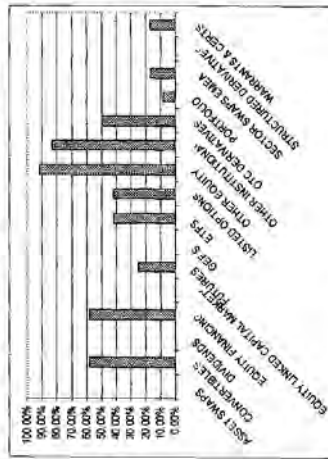

## Business Profile

2006 Annualized Revenue *	\$1,202,582
2006 Actual Revenue	\$504,413
Total Number of Clients	12
Average Number of Trades per Client per Year	1.26
Concentration	70% of revenues from hedge funds
Production per Client	\$16,400 (average)

\* Annualized for April 1 establishment of Product Development Group

## Americas Equity Derivatives Sales & Structured Marketing New Product & Trade Development

### 2006 Analysis

#### Market Prognosis

- Ever changing tax, accounting, and regulatory frameworks both inside and outside the US create tremendous opportunities for high value-added structured solutions.
- Maturation of hedge funds has created a natural, sophisticated client base focused on incremental returns.
- Cross-border business in state of transition due to changes in UK tax regime. Creates opportunities for ML to create new products for UK clients. Additionally, represents an advantage for ML as equity business less reliant on UK counterparties than many competitors.
- Sales force communicates consistent demand for deferral and recharacterization products.

#### Marketing & Development Plan

- Sales & marketing efforts focused on:
    - Communicating product opportunities and expertise to sales teams (particularly Multi-Product Marketing, Institutional Structured Marketing, and CPC)
    - Responding to client issues with tailored solutions
  - Client diversification
    - Hedge funds accounted for 75% of clients in 2005. We anticipate reduction to 50% in 2006 with addition of mutual fund and banks (Stair Street, Northern Trust for yield enhancement and Dresdner, BarCap, RBC for prop trading strategies).
- #### 2006 New Product Targets
- Launch 3 new product offerings for clients. Focus on:
    - Yield enhancement;
    - Deferral and recharacterization;
    - Fund structures;
    - Financing and monetization.
  - Develop/implement 1 new prop trading strategy

### Revenue Growth Assumptions

- 15 new dividend enhancement clients
- 8 new clients for Project Gemini

### Revenue Opportunity & Budget

Clients	Targets	Potential Opportunity	Potential Growth	2006 Budget	2006 Growth
Core Business	12	\$4,000,000	n/a	\$3,161,250	n/a
New Clients	24	\$31,000,000	n/a	\$14,704,250	n/a
Total Business *	36	\$35,000,000	n/a	\$18,104,250	n/a

\* \$24,773,000 Pre-MLEMEA split

Chris,  
 Thanks for your prompt response.  
 The advice we have received from external counsel differs from your interpretation below, however, I believe you are currently working with Raj on a non legal solution.  
 I hope this matter comes to a swift resolution.  
 Regards  
 Ashley

**Subject:** RE: Exclusive Lending Agreements - Janus Capital and Foreign & Colonial

Hamish / Ashley / Raj,

After deliberating with my colleagues on this issue, we would like to further discuss the Janus and F&C ESLA's with Merrill in an effort to resolve Merrill's concerns:

- 1) SFTC disagrees with Merrill's position that the wording in Section 8 of the Janus ESLA (Section 7 of the F&C ESLA) should serve as grounds for termination. No regulatory, legal or political event has taken place which has had the result of terminating or materially restricting the securities lending business (either generally or as relates specifically to either the lender or borrower). The derivatives inquiry by the IRS and/or the senate subcommittee does not itself rise to the level of a regulatory, legal or political event as applied to securities lending; or even in the general sense, as no action has been taken by either body to restrict or terminate securities lending. Merrill appears to be making a business decision based on Merrill's assessment of the climate surrounding this trade and factors particular to Merrill, as opposed to a regulatory, legal or political event which materially restricts lending.
- 2) Additionally, as of yesterday's close of business market values, no Material Change event has been trigger in relation to any of the four lots at issue (please see the attached spreadsheet). The appropriate benchmark reference in the Janus ESLA is the market value of the awarded lots as of Term Start Date, and in regards to the F&C ESLA, the number included in Schedule 1 (which reflects the market value of the US component of Lot 11 as of auction date). It should be noted that recent market trends would suggest that a potential breach of these triggers is more likely than not, but at present has not happened.

Any assistance that eSec can provide to Merrill is based solely on eSec's business relationship with Merrill, which we highly value, and not as a result of the contractual terms of the aforementioned ESLA's. We would like to note that to date Merrill is the only borrower counterparty in our program that is seeking to terminate an ESLA as a result of the IRS and/or Senate probe into offshore derivatives trading.

We have every intent and hope that this issue can be resolved in the context of continuing what has been to this point a mutually beneficial relationship.  
 I look forward to discussing this in greater detail with you at your earliest convenience.

**To:** Chris Poikonen; Mark Wilson  
**Cc:** Wilson, Ashley (London); Patel, Rajeev (London)  
**Subject:** Exclusive Lending Agreements - Janus Capital and Foreign & Colonial

Dear Chris & Mark

Many thanks for meeting with us early on today on short notice. As explained verbally, as a result of the actions by the US Senate's Permanent Subcommittee on Investigations our Jersey entity (Merrill Lynch Equity Solutions Jersey or MLESJ) has had to cease trading in regards its stock lending activities for US stocks. As a result of this we are seeking to have the Lender recall the securities in line with the wording as set forth below. The wording can be found in Clause 8 of the ESLA between MLESJ and Janus Capital dated 30 Oct 2007 and Clause 7 in the ESLA between MLESJ and F&C dated 6 Nov 2007.

Our opinion is that as the securities lending business of MLESJ undertaken in these Agreements has been materially restricted, (to the point where we are unable to borrow any of the US securities within the lots), the clause therefore requires the Lender to recall all outstanding loans, for the borrower to return all loaned securities and for the Agreement to terminate.

We feel that this is the best and most appropriate way of handling the unfortunate situation for all concerned as it will allow the yourselves and the Lender to take the lots and look to re-bid / place them elsewhere with an entity who is able to utilise them. Whilst MLESJ has the right to renegotiate and ultimately terminate if a new fee level cannot be agreed (such agreement of a new fee would be difficult given MLESJ's position) on a number of the Janus lots (38 & 27) due to their performance having decreased by 20% or more we would prefer to avoid this route as it would (in our view) merely prolong the process.

I understand you will wish to consult with your colleagues and legal counsel and look forward to your response. Please let me know if I can be of further assistance.

Kind Regards  
Hamish

Clause 7/8

"If by reason of a regulatory, legal, political or any other similar event, Lender suspends all securities lending, and/or the securities lending business is terminated or materially restricted, Lending Agent shall recall all outstanding Loaned Securities, no new Loans will be allowed, and this Agreement shall terminate on the day after the day on which all Loaned Securities are returned. The Exclusive Fee shall continue to accrue on all Loanable Securities until all Loaned Securities are returned."

Brian—

Just for the avoidance of doubt as Sonny and his brethren say, it works with IBM, then JPM, then AIG, ad nauseum as long as you change names and have a business reason for doing so, but Don has cautioned us that converting the JPM dividend to nontaxable ordinary income lending the shares just long enough to cover the record dates quarter after quarter does not. And perhaps other clients are less concerned about playing the audit lottery than are we. Why not take this back around the horn the other way and ask John to ask his Shearman contacts to talk to Don who would then revert to us?

Good weekend—

—John

sorry for the confusion on this but i'm convinced that something is being miscommunicated here somewhere - i'm pretty sure that S+S has acted as outside council for some of our existing counterparties while they were looking at this trade - i think those counterparties are fairly conservative and would not be doing this without S+S's consent especially since they "trade" much more frequently than i think you would (they own many more stocks i think). I'll check with john and make sure my facts are right and if they are lets work to set up that call and hopefully straighten things out. (i'll call you before doing anything)

**Subject:** RE: crescent/olayan follow up

Our contact, Brian, is Don Lonczak, who says he knows John pretty well. Don has talked to a number of his partners, all of whom tell him that the transaction works, as I said, once, maybe twice because repeated use, coincidentally around dividend payment time, would provide a strong case for the IRS to assert tax evasion. So

yes, looking at it in a vacuum, it works, it is the repeated "overuse", e.g. pigs trying to be hogs, that proves problematic.

But I'd be happy to listen to them discuss its merits.

—John

**Subject:** RE: crescent/olayan follow up

Thanks, Brian. I'm told that our contacts at Shearman know John Addis quite well and report that they are apparently satisfied that the transaction works. Once. Or maybe twice, but not necessarily in succession, the reason being that repeated "abuse" (my hyperbolic word, not theirs) without a non-tax related business purpose would quickly lead the IRS to such conclusion. Might John have further comment?

john - sorry this has taken so long to get to you - as a follow up to our meeting and our "gemini" product that can enhance the effective dividend you get on physically held US stocks (like OXY), here is our standard "indemnity" language that you were looking for - please review it and let me know your thoughts. if i'm doing my math right, i think this can save you around \$7 million per year on OXY. thanks.

"6.5 Unless otherwise agreed, all payments under this Agreement shall be made on the due date without any withholding or deduction whatsoever unless required by law on account of tax. If any deduction or withholding on account of tax is required by law to be made from any payment between the parties hereto, then the payor shall pay in the same manner and at the same time such additional amounts as would result in the receipt by the payee, free from any such withholding or deduction, such amounts as would have been received by the payee had no such deduction or withholding been required to be made and shall at the same time supply tax vouchers in respect of the same if requested."

<b>Enhanced Stock Lending Over US Equities</b>	
<b>Table of Contents</b>	
♦ Summary	
♦ Stock Loan Terms	
♦ ML Borrow Counterparty	

## Enhanced Stock Lending Over US Equities

### Summary

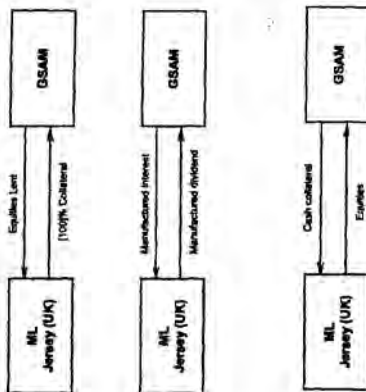

- ❖ Merrill Lynch is able to offer enhanced levels on loans of US equities to non-US Clients.
- ❖ Pricing levels are circa 90% of the dividends on underlying US stocks.
- ❖ The transaction is executed as a 15 day stock loan under standard GMSLA documentation.
- ❖ The stock loan counterparty is a Jersey (UK) entity in the Merrill Lynch group.

## Enhanced Stock Lending Over US Equities

### Stock Loan Terms

- ♦ GSAM lends US equities for 15 days to an ML company in Jersey (UK) documented under a market standard GMSLA and ML Jersey posts 100% collateral to GSAM or offers higher levels not collateralised.
- ♦ During the period of the stock loan, ML Jersey is the legal owner of the equities and can on-lend, sell, pledge, or otherwise rehypothecate them.
- ♦ Under the terms of the stock loan, ML Jersey will make a manufactured dividend payment to GSAM equal to the agreed percentage of the actual dividends paid. Likewise, GSAM will pay to ML Jersey manufactured interest on the collateral it holds.
- ♦ After 15 days, GSAM will receive equivalent equities back from ML Jersey and return the collateral. ML Jersey will pay a stock lending fee to GSAM for the use of the equities.

### Enhanced Stock Lending Over US Equities

#### ML Borrow Counterparty – “Merrill Lynch Equity Solutions Jersey”

- ❖ Merrill Lynch Equity Solutions Jersey is a corporation located in Jersey, UK.
- ❖ 100% subsidiary of Merrill Lynch
- ❖ Capitalised with \$300m of equity.
- ❖ \$1bn funding facility with and \$300m demand loan to Merrill Lynch & Co. Inc.

Rachel,

Group Tax and the business side here have produced a standardised indemnity that we can offer in relation to these transactions going forward. Attached is a mark up showing how this changes from what we had been discussing. Note that we can accept no substantive changes to this. Apologies for the timing being during our negotiation, however this has been an ongoing project on our side.

We look forward to discussing this with you and hope that it is acceptable.

Best regards,

Graham.

Graham,

I am not sure I understand your reference to part (d) of Rider 1B, because the latest draft of the reps is formatted as (i) - (iii). However, I included your language below at the end of (iii), which is where I believe you intended it to go (although we included some revisions to (b) and (c) and I deleted your (d) as we cannot agree to that provision). Please have your tax group review the revised reps (see attached) and let us know if you have any additional comments or questions as soon as possible.

Regards,  
 --Rachel

Mary, Rachel,

Thanks for your time on Wednesday morning to discuss the US stock lending opportunity. As promised, attached is our standard lending agreement for your review. This includes the tax language that you wished to see.

Please note that should we proceed we will send over a document for your legal team to review and provide comments on, however the relevant language will be identical.

We look forward to your comments and to moving this forward.

Thanks and regards,

Graham.

GS-PSI-002518

\*The Borrower hereby represents and warrants that:

(i) it will fully comply with all applicable United States income tax withholding obligations if any, including, without limitation, U.S. Internal Revenue Service regulations and administrative guidance requiring the withholding of tax from substitute payments made to the Lender (either directly or through any agent of the Lender) pursuant to this Agreement;

(ii) except as otherwise provided herein, it will be liable for and will fully indemnify the Lender for any United States tax liability, including any interest, penalties or additions to tax and including any United States withholding tax imposed on such indemnity payment, with respect to any failure to withhold and timely pay to the U.S. Internal Revenue Service any United States withholding tax imposed on any substitute payments made to the Lender (either directly or through any agent of the Lender) pursuant to this Agreement; and

(iii) it will provide the U.S. Internal Revenue Service and the Lender with a timely and accurately completed Form 1042S or other required form and will cooperate with the Lender (and its agents) in the event of any U.S. Internal Revenue Service inquiry, including providing to the Lender (or its agent) any other tax forms reasonably requested by the Lender; ~~provided that,~~

The foregoing representations and warranties in (i) through (iii) shall be effective and binding upon Borrower only to the extent that all of the following conditions in (a) through (d) are and remain in force and are fully complied with by Lender:

(a) ~~Lender provides~~ shall provide written notice to Borrower within thirty (30) days of receipt of any claim for U.S. withholding taxes by a U.S. governmental agency;

(b) Borrower will have the right to assume the defense of the claim (at its own expense and with counsel which it shall select in its discretion) at any time after Lender has given Borrower notice of the claim, although Lender shall also be entitled to ~~participate in~~ observe any such proceeding (at its own expense and with counsel which it shall select in its discretion); ~~and~~

(c) Through to the date that is ten (10) days after Borrower has received the appropriate notice, or ~~for~~ so long as Borrower has assumed the defense of the claim as provided for immediately above, Lender shall not (i) pay the claim, or (ii) consent to any settlement or other agreement with respect to the claim without the prior written consent of Borrower, which will not unreasonably be withheld or delayed; provided, however, that Lender may pay such claim ~~or consent to such settlement or agreement if required by law upon a final determination of such liability; and~~

(d) Lender shall consult with Borrower prior to the submission of any written correspondence to (and copy Borrower on all written correspondence sent to), and Borrower shall be entitled to observe (at its own expense and with counsel which it shall select in its discretion) any other communication with, any U.S. government officials in respect of the transactions contemplated hereby, provided, however, that in no event shall Lender be required to copy Borrower

on any correspondence that would, prior to being sent to Borrower, be attorney-client privileged.

Any payment from Borrower to Lender under iii through (iii) above shall be reduced by an amount equal to the sum of (A) the sum of the difference between iii the payments of interest that would have been made on the Collateral as of each interest payment date prior to the date of the final determination of the interest rate on the Collateral had been the Federal Target Rate and iii the amount of interest actually paid on each such interest payment date, and (B) interest at the Federal Target Rate in respect of each such difference from and including such related interest payment date to and including the date of such payment from Borrower to Lender, compounded on a daily basis.

Monday or Tuesday are fine with me.

By the way, do you happen to have Jason's mailing address? Never got a chance to send him his thank you card & box of chocolates before he left Tokyo.

thanks

Yes, ask the PBs. I would like to understand what the industry practice may be (I also know you were looking for an excuse to call either Ben, Kenna or Doran).

As for the re-scheduling, I am actually taking off tomorrow to go to my son's school and on vacation the rest of the week. Can we meet next Monday at 9, 9:30 or 10 or Tuesday anytime between 10:30 and 1?

Good luck in the 2 1/2 hour meeting - anything interesting?

On the recruiting front there are ~ 11 phone screens that will happen in the next week or so. Hopefully, this will help with our resource needs.

Let me know if there are any new issues that you have encountered.

Thanks.

Ask the PBs? I'm sure they will do whatever we ask... but we should discuss internally: this would be a big thing (ie, something the division & firm would probably need to weigh in on).

Btw, do you mind if we re-schedule our meeting tomorrow? I have some other meeting between 9-11:30.

thanks

Arlen, this may be a good question for a Prime Broker in how they make the payments. If this split were the case for dividend enhancement, I would think the entry/journal would not touch the client account (e.g. if there was a 50/50 split, there would be two accounts that were credited: GSAM Prop account and Fund account). Can you ask around?

Thanks,

---

I'm not advocating this (despite Gary's comment) but I wonder if this is the "market convention" for yield enhancement as well (since we can basically get similar economics through what we call yield enhancement or what others may call sec lending). Our current revenue for yield enhancement in just GEO is on the order of 7-8mm USD per year (and this is without any US securities involved).

Subject: RE: US stock lending to MLESJ

FYI... I just spoke to a friend of mine (loosely defined) who currently works at Northern Trust on the passive side and used to work at BGI. He said that both of those banks receive securities lending proceeds directly into their Firm P&L. He mentioned that most managers that employ proprietary securities lending capabilities receive anywhere from 50 - 80% of the lending received. He also said that this is becoming a more competitive landscape so pricing is compressing. They also do a lot of lending for non-custodied accounts (i.e. separate accounts). In fact, he claims that BGI did not custody any of their own assets, whereas NTCO does.

This would obviously be an enormous business opportunity given the amount of AUM we have. Our clients in most of our proprietary commingled funds see the benefits through the use of BGA and I guess GS&Co sees some benefit since BGA is a wholly owned sub (I think). But given the above information (which we should verify) we are giving a large

866

portion back to our clients i.e 80 - 85% v 20 - 50% and our group (QIS or GSAM) is not receiving the revenue from even the 20%.

We should either make a much bigger deal in our marketing materials or we may want to consider keeping a portion of the BGA revenue with GSAM since the number is way below market (Arlen's suggestion). We may also want to work out a deal with BGA and pitch their services to our separate account clients (or attempt to mandate it in our guidelines - we currently allude to it - we should just confirm with Legal that this is implied - see below). Granted many clients may have this in place with custodians, but given the revenue opportunities someone should take the ball on this GSAM wide effort. (Karl, I think you were working on some hires in this space, but alternatively we can have someone start to work with BGA on their connectivity to our client's custodians, do some market research, and then possibly prioritize a list of accounts' to target).

**Lending:**

Permitted to lend securities long in the Account to institutions, such as certain broker-dealers and banks; provided, however, that such loans are secured according to market practice by collateral in cash, cash equivalents, or U.S. Government securities. The lending agent guarantees that all securities on loan will be recalled by settlement dates of sell transactions. If for some reason securities are not recalled on time and settlements fail then the agent would compensate the portfolio for all fees and charges related to failed settlements. The compensation would insure that the account performance is not affected negatively.

Graham,

I am not sure I understand your reference to part (d) of Rider 1B, because the latest draft of the reps is formatted as (i) - (iii). However, I included your language below at the end of (iii), which is where I believe you intended it to go (although we included some revisions to (b) and (c) and I deleted your (d) as we cannot agree to that provision). Please have your tax group review the revised reps (see attached) and let us know if you have any additional comments or questions as soon as possible.

Regards,  
—Rachel

Rachel,

To give that indemnity, we need the following language inserted at the end of part (d) of Rider 1B. The comments you sent over are still subject to further review by Group Tax here.

Thanks.

...provided that:

(a) Lender provides written notice to Borrower within thirty (30) days of receipt of any claim for U.S. withholding taxes by a U.S. governmental agency;

(b) Borrower will have the right to assume the defense of the claim (at its own expense and with counsel which it shall select in its discretion) at any time after Lender has given Borrower notice of the claim;

(c) Through to the date that is ten (10) days after Borrower has received the appropriate notice, or so long as Borrower has assumed the defense of the claim as provided for immediately above, Lender shall not (i) pay the claim, or (ii) consent to any settlement or other agreement with respect to the claim without the prior written consent of Borrower, which will not unreasonably be withheld or delayed;

(d) Lender shall not consult with U.S. governmental officials regarding whether Lender would be required to effect payment of any U.S. federal income withholding tax in respect of the borrowings of securities of U.S. issuers from Lender or any other matter described herein without the prior written consent of Borrower, which consent will not unreasonably be withheld or delayed.

Mary, Rachel,

Thanks for your time on Wednesday morning to discuss the US stock lending opportunity. As promised, attached is our standard lending agreement for your review. This includes the tax language that you wished to see.

Please note that should we proceed we will send over a document for your legal team to review and provide comments on, however the relevant language will be identical.

We look forward to your comments and to moving this forward.

Thanks and regards,

Graham.

— Redacted by the Permanent  
Subcommittee on Investigations

Response to NYSE Preliminary Investigation Request of 10/24/05

On September 23, 2005, the NYSE received a U-5 for Citigroup Global Markets Inc (the "Firm") concerning [REDACTED] (the "registered representative"). In order to assist us in our review of the matter referred to in the U-5, please supply us with the following information: Please advise us immediately if you have previously received a written request from another self-regulatory organization, or the Securities and Exchange Commission, requiring the submission of information pertaining to this matter.

No such other request.

1. A statement from the Firm providing the details of its examination of this matter, including findings and conclusions. Additionally, please indicate how and when the Firm became aware of the matter.

The Equity Finance Desk (the "Desk") of Citigroup's Global Corporate Investment Bank engages in stock lending, as well as equity derivative and related stock hedging transactions. Its customers consist largely of broker/dealers and hedge funds. In recent years, a portion of the Desk's business in New York has been dedicated to achieving "dividend uplift" for foreign customers in respect of U.S. equities. The customer trades at issue in this matter occurred from approximately 2002 through 2005, with the most significant activity occurring in 2004 and early 2005.

U.S. tax rules provide that dividend equivalent amounts paid to a foreign investor under a derivative contract are not subject to withholding tax. By contrast, actual dividends on U.S. equities are subject to U.S. withholding tax. In the dividend uplift trades, CGML – Citigroup's U.K. broker/dealer – would acquire a U.S. equity security from an offshore fund or dealer (via a transaction between that entity and Citigroup Global Markets, Inc. ("CGMI")) and enter into a total return swap ("TRS") with that entity. At the termination of the TRS, the offshore entity would in many instances resell the equities. In exchange for a LIBOR-based return, CGML paid dividend equivalent amounts to the offshore entity under the TRS, and treated those amounts as paid on a bona fide derivative contract, rather than as a pass-through of dividends on stock held in a custodial-type capacity. This treatment allowed the payments to be made free of the U.S. withholding taxes that would otherwise have been due to be withheld on dividends paid to the offshore entity. (The Desk's UK traders used similar techniques in connection with transactions in which CGML acquired various European equities.)

In another type of trade, CGMI would borrow non-US equities from the Street and sell them (via an interdealer broker) to CGML. CGML would then enter into a swap with a CGMI affiliate. These trades generated tax reclaims for CGML and incurred foreign withholding taxes that were claimed as US foreign tax credits for Citigroup. The trades were executed from approximately 2000 through 2003, with the most significant activity occurring in 2003.

May-26-2006 01:50pm From:SSB LEGAL

+2126971497

T-627 P 026/028 F-626

Customers executing TRSs with the Desk frequently sell the underlying securities to the Desk at the beginning of the TRSs and then wish to reacquire the securities at the termination of the TRSs, without any execution or other risk. However, if at the time the TRS was entered into the customer and the Desk had an understanding that at termination of the TRS the securities would be sold (directly or indirectly) back to the customer, the TRS may be recharacterized for tax purposes as a financing transaction, and the customer as the continuing owner of the securities. In that case, Citigroup: (i) may be obligated to the IRS or another tax authority for payment of tax that should have been withheld on payments of dividends or dividend equivalent amounts; as well as (ii) may not be entitled to applicable non-U.S. tax reclaims and U.S. foreign tax credits.

Citigroup's Tax Department promulgated transaction guidelines for TRSs on U.S. equities in order to minimize the risk that such transactions would be recharacterized as financings and subsequently lose their intended tax benefits. The risk is mitigated principally by minimizing the chances that the underlying equities would be crossed back to customers. These internal tax guidelines are attached hereto as Attachment A.

In mid-2005, an internal audit of the Desk revealed that certain New York traders were not in certain instances fully complying with the tax guidelines. Citigroup engaged outside counsel to review the Desk's trading activity with respect to the dividend uplift trades. That review found, among other things, that the Desk engaged in transactions in 2004 and 2005 in which it purchased U.S. and non-U.S. equities directly from customers (largely non-U.S. broker/dealers) and then resold the equities back to the customers upon termination of the TRSs, either directly or through interdealer brokers.

As a result of this trading activity, Citigroup established accruals/reserves in the second and third quarters of 2005 based upon a determination that certain TRSs associated with the U.S. and certain non-U.S. dividend uplift trades may not be considered derivative transactions for tax purposes, and therefore may not give rise to preferential U.S. tax treatment and/or non-U.S. tax reclaims or U.S. foreign tax credits.

2. Signed statement from the registered representative addressed to the Exchange in response to the allegations.

Please see Attachment A.

3. Copies of all correspondence and memoranda referring or relating to this matter.

Will be provided.

4. What factors or evidence did the Firm consider before drawing its conclusion to discipline the registered representative? What considerations formed the basis for the severity of the discipline and have the obligations pursuant to the disciplinary action been satisfied?

The following is a non-exhaustive list of facts discovered during the course of outside counsel's review of the Desk that formed the basis for the recommendation that disciplinary action be taken against [REDACTED]:

- [REDACTED] misled Citigroup's Tax Department with respect to the execution of certain non-US equities.
- [REDACTED] engaged in and/or allowed violations of certain provisions of the internal TRS tax guidelines including failing to ensure that the TRSs: (i) had a term of at least one year; (ii) were not in fact terminated before 45 days had elapsed; (iii) had at least one periodic payment; and (iv) represented less than 20% of the anticipated market-on-close volume on the specified exchange on the termination date.
- [REDACTED] also failed to acknowledge such violations when questioned more than a year later about compliance with the tax guidelines.

Based on the foregoing, the Firm decided to suspend [REDACTED] effective August 30, 2005. [REDACTED] was reinstated on October 31, 2005.

Citigroup's Tax Department has revised the internal TRS tax guidelines to better ensure that TRSs and similar transactions entered into by the Desk are respected as derivative transactions for tax purposes. In addition, Citigroup's Compliance Department and the Desk are instituting certain monitoring procedures for the revised tax guidelines and the Desk is implementing a comprehensive policy with respect to TRSs. Copies of these new policies and procedures will be forwarded to the NYSE as soon as they are finalized.

As previously indicated, Citigroup is willing to meet with the NYSE to discuss this matter in further detail.

5. Copies of the Firm's relevant policies and procedures.

Please see Attachment B.

Has the Firm received any other complaints regarding the registered representative, which are open or were resolved within the preceding three years of the date of the current reportable event? No.

Attachment A

To: The New York Stock Exchange  
February 1, 2006

As a trader on the Equity Finance Desk (the "Desk") at Citigroup Global Markets, Inc. ("CGMI" or the "Firm"), I am involved in swaps with sophisticated institutional counterparties relating to U.S. and non-U.S. equities. In September 2004, I received an inquiry from CGMI's Tax Department regarding certain hedging transactions relating to non-U.S. equities. It appears that I misunderstood the thrust of the inquiry and that I was hasty in my response, and therefore I may have unintentionally misled the Tax Department.

In 2003, the Firm issued guidelines (the "Guidelines") intended to assist in the structuring of total rate of return swaps based on U.S. equities so as to preserve their tax benefits. The Guidelines included a requirement that CGMI sell the equities into the market based on market-close pricing at the termination of the swap. To comply with this requirement, CGMI often used an inter-dealer broker ("IDB") to buy and sell the equities. When selling equities to an IDB on the unwind of a swap, CGMI was not supposed to communicate with the IDB concerning the identity of our swap counterparty. A routine internal audit indicated that one of the traders whom I supervised had helped an IDB locate a buyer for the equities at unwind of the related swap.

In early 2005, I responded to an inquiry from the CGMI Tax Department regarding the Desk's compliance with the Guidelines. My response focused on the requirement of a minimum 45-day period before early termination. In a number of prior conversations, a senior Tax Department attorney had consistently explained to me and other members of my department that the 45-day requirement related to a weighted average considered on a portfolio basis of our entire book. Thus, I responded that the Desk was complying with the Guidelines, because on average the swaps were kept on for 45 days or longer.

In late 2005, the Firm issued clearer and more detailed guidelines, and the Desk now has enhanced control over the structuring and execution of its business.

**Equity Finance  
Equity Derivatives**

**Tax Policy Guidelines for Total Return Swaps on US Equities**

When structuring a total return equity swap with respect to dividend-paying US equities ("TRS") with a foreign counterparty, the following execution parameters must be followed:

1. The underlying US equity must be actively traded (i.e., large cap, liquid market);
2. The desk may buy its hedge (i.e., the underlying equity) from the swap counterparty;
3. The TRS must have a term of at least one year, but must not in fact be terminated before 45 days have elapsed;
4. The TRS must provide for periodic payments (e.g., monthly), and in fact at least one such payment must be made during the time period in which the swap is open (so that it qualifies as a notional principal contract for tax purposes);
5. The final payment under the TRS at termination is based on the market-at-close price of the underlying equity and the desk anticipates selling its equity hedge into the market on the termination date based on market-close-pricing;
6. The desk must reasonably expect that the number of shares underlying the TRS represents less than 10% of the anticipated market-at-close volume on the specified exchange on the termination date; and
7. If our foreign counterparty wishes to purchase the referenced equity, it must execute that buy order through a broker other than a Citigroup affiliate.

To the extent the underlying equity is thinly traded, the termination payment cannot be based on market-at-close prices and should probably be based on a formula that effectively incorporates a collar around the beginning stock price. The width of the band can vary depending on how illiquid the underlying security is, the maturity of the swap and whether the counterparty contemplates buying the equity back, preferably through another broker, at TRS termination.

Re: IRS Withholding Tax Examination (2003-2005): Total Return Swaps over US Equities

[REDACTED] = Redacted by the Permanent  
Subcommittee on Investigations

As discussed, we are writing to provide a summary of Citi's<sup>1</sup> transactions involving Total Return Swaps over US Equities, Citi's Tax Department guidelines for such transactions and Citi's internal review of the execution of these transactions. This information has been discussed with the IRS at previous meetings, including our most recent meeting of May 10, 2007.

**Total Return Swaps over US Equities:**

Pursuant to a typical total return swap over a US equity, Citi agrees to make payments to the counterparty equal to the price appreciation and any dividends for the referenced stock, and the counterparty agrees to make payments to Citi equal to the price depreciation in the stock and a financing payment (typically, based on LIBOR). Citi enters into total return swaps with a wide range of customers in its capacity as a dealer in a broad range of over-the-counter derivative investments. As a dealer in swaps, Citi typically hedges its exposure to the market risks attendant to any derivative contracts into which it enters. Citi's most straightforward hedge of a total return swap under which Citi pays total returns on a stock to a counterparty (a "short" swap, from Citi's perspective) is for Citi to acquire the underlying stock.

The applicable trades were all documented as derivative transactions using standard ISDA documentation, and satisfied all the formal requirements of notional principal contracts. The non-tax allocation of legal risks and rewards under the transactions (e.g., absence of counterparty voting power over the underlying equities and Citi's acceptance of counterparty credit risk) were also identical to the allocation of those critical risks and rewards in other notional principal contracts.

The law is clear that no withholding generally is required with respect to payments to non-US persons under notional principal contracts. If a total return swap over a US equity were re-characterized as a repurchase agreement or as a securities loan, however, there could be a withholding tax requirement with respect to dividend equivalent amounts paid under the total return swap. The law is unclear as to when such a re-characterization might be appropriate.

<sup>1</sup> For purposes of this memorandum, the term "Citi" encompasses all affiliates, including CGMI, CGML, and Citibank.

Permanent Subcommittee on Investigations  
**EXHIBIT #45 - FN 289**

Citigroup Global Markets Inc.

CITI\_PSIWHTAX001208

**Tax Department Guidelines:**

Therefore, in light of a lack of authority on when a total return swap might be re-characterized, Citi's Tax Department provided guidance for these trades to its Equity Finance and Equity Derivatives business units throughout the period of this IRS examination (2003-2005). The Tax Department initially provided its guidance to the business units orally and, later, issued a written set of "Tax Policy Guidelines for Total Return Swaps on US Equities" for the units (the "Tax Policy Guidelines," a copy of which is attached as Exhibit 1).<sup>2</sup> These very conservative guidelines set forth various parameters with respect to the execution of total return swap transactions, in order to prevent any situation from arising in which a total return swap might be potentially susceptible to re-characterization as a repurchase agreement or as a securities loan.

The vast majority of the total return swaps over US equities in the current IRS audit occurred after the Tax Policy Guidelines became effective. Hence, the Tax Policy Guidelines were applicable to the vast majority of the swaps now being examined by the IRS.

Under the Tax Policy Guidelines, Citi's business units generally were permitted to acquire a hedge consisting of the stock underlying a total return swap from the total return swap counterparty at the beginning of the trade. The Tax Policy Guidelines did not, however, generally contemplate delivery of the stock back to the counterparty at the termination of the trade. More specifically, the Tax Policy Guidelines stated as follows:

".....5. The final payment under the TRS at termination is based on the market-at-close price of the underlying equity and the desk anticipates selling its equity hedge into the market on the termination date based on market-close pricing."

The Tax Department guidelines with respect to these transactions changed over time, however. Interim and revised guidelines were circulated by the Tax Department in 2005. A copy of the revised guidelines (as provided to the New York Stock Exchange on May 4, 2006) is attached as Exhibit 2.<sup>3</sup> In addition, the guidelines have continued to evolve in some respects. In particular, as of October of last year, delivery of the stock back to the counterparty at the termination of the trade has been allowed under certain circumstances.

During 2005, Citi's Internal Audit Department conducted an internal review of the manner in which total return swaps over US equities were executed, for purposes of reviewing compliance with the Tax Policy Guidelines. Citi's Internal Audit Department found that the Equity Finance business was not in full compliance with the Tax Policy Guidelines. Based on this finding, Citi engaged outside counsel to conduct a further review of total return swap transactions from January 2003 through the date of the review. As a result of this further review, certain total return swap transactions were determined to have been executed in ways that failed to comply with the Tax Policy Guidelines. In particular, the review found that, as to some total return swap transactions, there was an apparent understanding at the inception of the trade that the shares would effectively be delivered back to the counterparty at the termination of the trade through

<sup>1</sup> Although dated December 1, 2003, the Tax Policy Guidelines did not become effective until the first quarter of 2004.

<sup>2</sup> Although dated October 20, 2005, and effective from October 20, 2005, the revised guidelines were not finalized until May 2006.

the use of a large volume market-on-close order, a direct cross to the counterparty, or an effective sale to the counterparty by way of an inter-dealer broker (an "IDB"). The review resulted in disciplinary action being taken against two individuals in the Equity Finance business unit. Furthermore, the results of the review were reported to the New York Stock Exchange in connection with Citi's obligations as a registered broker-dealer. The New York Stock Exchange then initiated its own review focusing on supervisory controls (which is still pending).

**Equity Finance – Transactions Where Withholding Taxes Were Paid:**

Because of the non-compliance with the Tax Policy Guidelines, Citi determined that certain of the total return swap transactions entered into by the Equity Finance business unit could potentially be re-characterized as repurchase agreements or as securities loans. If the transactions were re-characterized, a withholding tax could be required with respect to the dividend equivalent amounts that had been paid on the transactions.

Through extensive interviews, Citi identified the trades for which its traders appeared to have an understanding with the counterparty at the inception of the trade to deliver shares back at the termination of the trade. Citi then decided to pay US withholding tax on the dividend equivalent amounts that had been paid under the transactions, even though the tax liability was uncertain. Indeed, these transactions were documented like any other derivative transaction, and the legal risks and rewards in these transactions were allocated in the same manner as the risks and rewards for any other notional principal contract.

The trades that involved an apparent understanding regarding delivery back to the counterparty were all executed with UK broker-dealers. Such transactions were, accordingly, segregated in Citi's analysis. For those transactions with UK broker-dealers that had closed by mid-2005 (when the internal review was being conducted), Citi paid withholding taxes. As discussed in greater detail below, if a transaction had closed and was not executed with a UK broker-dealer (e.g., a transaction with a hedge fund), no withholding taxes were paid. Transactions still open as of mid-2005 were required to be closed out with no direct or indirect delivery of the shares back to the counterparty, regardless of any prior understanding and, hence, no withholding taxes were paid on these trades.

With regard to the Equity Finance business unit, the transactions with UK broker-dealers on which withholding taxes were paid involved approximately \$160M of dividends (\$112M for transactions involving delivery back to the counterparty through IDBs, \$28M for transactions involving delivery through direct crosses, and \$20M for transactions involving delivery through transactions on an exchange). Since withholding on these transactions was eligible for treaty benefits (and Citi was provided appropriate Forms W-8BEN by its counterparties), the applicable withholding tax rate was 15%, resulting in a withholding tax of approximately \$24M.

At the time this withholding tax of approximately \$24M was calculated by Citi, Citi was in an overpayment situation because it had incorrectly withheld tax (in an aggregate amount greater than \$24M) on certain other payments that were completely unrelated to the total return swap transactions. As a result, Citi's liability of approximately \$24M resulting from the total return swap transactions reduced the pre-existing overpayment amount.

Citi prepared worksheets (copies of which are attached as Exhibit 3) to compute the amount.

of US withholding taxes due to the IRS as a result of the determination that withholding taxes should be paid in respect of certain of the total return swap transactions and filed Forms 1042 and Forms 1042-S for 2003 (amended return filed), 2004, and 2005 (copies previously provided to the IRS).

**Equity Finance – Transactions Where Withholding Taxes Were Not Paid:**

The Equity Finance transactions for which Citi did not pay withholding taxes included those transactions where it was unclear at the inception of the trade whether the counterparty would seek delivery of the shares back at the termination of the trade and, accordingly, there was generally no apparent understanding at the inception of the trade regarding possible re-delivery of the shares upon termination. These transactions involved approximately \$239M of dividends, and were not executed with UK broker-dealers. Interviews indicated that most of these transactions were executed with hedge funds. Typically, the hedge funds were more interested in synthetic exposure, rather than delivery and re-delivery of shares.

As noted in Citi's letter dated March 2, 2007, however, the transactions on which no withholding taxes were paid did include: (1) transactions where Citi purchased shares from the swap counterparty at inception of the swap and sold shares to the counterparty upon termination of the swap, (2) transactions where Citi purchased shares from and/or sold shares to an IDB, and (3) transactions where Citi purchased shares on an exchange (including shares purchased pursuant to market-on-close orders) at inception of the swap and/or sold shares on an exchange (including shares sold pursuant to market-on-close orders) upon termination of the swap. However, as stated above, there was generally no apparent understanding at the inception of the swap to deliver shares back to the counterparty at the termination of the trade.

**Equity Derivatives:**

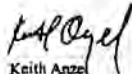

With regard to the Equity Derivatives business unit (involving approximately \$36M in dividends), Citi determined that no withholding was required because the applicable transactions either (i) were not clustered around dividend record dates; or (ii) generally did not appear to involve an understanding regarding delivery of the shares back to the counterparty at the inception of the trades.

**Conclusion:**

A thorough investigation of these transactions was conducted in connection with Citi's internal review. The transactions were clearly documented as notional principal contracts, and on their face met all the requirements of being notional principal contracts: the transactions were documented as derivative transactions using standard ISDA documentation; they satisfied all the formal requirements of notional principal contracts; and the non-tax allocation of legal risks and rewards under the transactions (e.g., absence of counterparty voting power over the underlying equities and Citi's acceptance of counterparty credit risk) were identical to the allocation of those critical risks and rewards in other notional principal contracts. As a result, Citi continues to believe that there are valid reasons to conclude that the transactions in question should be treated as notional principal contracts and that the payments thereunder should be exempt from US withholding tax. Nonetheless, Citi considered the possibility that certain of the transactions

885

could potentially be re-characterized as repurchase agreements or as securities loans and, therefore, withholding was applied where there was an apparent understanding, at the inception of the trade, to return the shares to the counterparty at the conclusion of the transaction. The Tax Policy Guidelines were intended to ensure that Citi's transactions did not come anywhere remotely close to this result. When Citi discovered that traders appeared to have violated those guidelines, Citi reported this non-compliance to the New York Stock Exchange in connection with its obligations as a registered broker-dealer, and also took the view that violating its own internal conservative guidelines should result in a US withholding tax liability, notwithstanding all of the important reasons why, even in these cases, the transactions fairly could still be construed as notional principal contracts.

Policy Owner(s): Corporate Tax – Structured Products  
Equities Compliance  
Subject: Procedures for Structuring Total Return Equity Swaps and Other  
Delta One Derivative Transactions ("DOTS")  
Contact person(s): See List at End of Document  
Scope of coverage: All  
Date of issuance: October 20, 2005

This memorandum describes the Firm's rules and procedures regarding the structuring of total return equity swaps including Contract for Differences ("CFDs") and all other delta one derivative transactions<sup>1</sup> (collectively "DOTS"). These procedures apply to all Citigroup entities and are effective until further notice. Written approval from the tax department is required for any exception to the rules set forth herein as well as any transaction that fails to comply with the principles of these rules as set out below.

**Principles:** The purpose of these rules and procedures is to ensure that (i) Citigroup's underlying hedge will be treated as beneficially owned by Citigroup and not the DOTS counterparty for U.S. tax purposes, where required; and (ii) Citigroup is viewed for U.S. tax purposes as entering into a financial derivative transaction rather than a repurchase agreement, stock loan or custodian relationship with the counterparty.

**Scope:** All DOTS where (i) Citigroup's counterparty is economically long U.S. or non-U.S. equity positions, (ii) the counterparty is, directly or indirectly, receiving the return on such position, and (iii) dividends with respect to the underlying equity are subject to source-country withholding tax or would be subject to such withholding tax if such equity were held by the DOTS counterparty directly.<sup>2</sup>

For the sake of clarity this policy does not apply to transactions that:  
(i) are not DOTS;

<sup>1</sup> "Delta one derivative transactions" for this purpose is intended to encompass all derivative transactions (e.g., swaps, forwards, options, etc...) where the risk retained by the Citigroup trading desk with respect to price movements of the underlying asset(s) is de minimis. Transactions with a delta in excess of 0.50 will be deemed to be DOTS.

<sup>2</sup> These procedures do not apply to U.K. equities since the U.K. does not impose a withholding tax on dividends; however, there are rules regarding swaps and CFDs on U.K. equities relating to stamp duty issues and the London tax department should be consulted with respect to such swaps and CFDs.

- (ii) are DOTS on equity positions which are not expected to pay a dividend;<sup>1</sup>
- (iii) are DOTS where the counterparty is paying the return of the equity to Citigroup (e.g., short positions in total return equity swaps);
- (iv) are DOTS on non-U.S. equity positions the dividends on which are not subject to source-country withholding tax, either to Citigroup or to the counterparty if the counterparty were to hold the position directly and Citigroup has received the proper documentation, if any;
- (v) are DOTS on non-U.S. equity positions where the equity is held outside the U.S. and, based on the jurisdiction of the Citigroup holder and the law of the relevant source jurisdiction, dividends with respect to such equity are not subject to source-country withholding (assuming proper local jurisdiction legal advice has been obtained);
- (vi) are exchange listed DOTS entered into in Citigroup's role as a market maker (i.e., where Citigroup must enter the trade due to its market making role and is unaware of the identity of the DOTS counterparty);
- (vii) are DOTS on equities that are not crossed-in from the counterparty where Citigroup does not hold the underlying equities for any period of the DOTS;
- (viii) are DOTS on non-U.S. equities where the DOTS counterparty is paid underlying dividends net of source country withholding taxes and the trading desk is not paid any "gross-up" from the tax department (e.g., Asian access products); or
- (ix) are DOTS on U.S. equities where the counterparty is a U.S. person and Citigroup has received the appropriate tax documentation.

**Definitions:**

For purposes of this document the following terms shall have the stated meaning:

**Average Daily Trading Volume:** The most current 30-day trailing average daily trading volume for the relevant equity.

**Cross-in / out:** DOTS execution process whereby Citigroup purchases / sells its physical hedge from/to the DOTS counterparty (including, with respect to Cross-out, a physical hedge that constitutes non-cash merger consideration for the original crossed-in hedge position). This term also includes any purchase or sale to or from an Inter-Dealer Broker (IDB) or any execution based on Market on Close (MOC), Market on Open (MOO) or any other objective price other than full day VWAP.

<sup>1</sup> For this purpose if a dividend has actually been declared or paid with respect to an equity at any time during the previous 12 months, it would be inappropriate to expect that the equity will not pay a dividend during the term of the DOTS. No expectations may be formed with respect to companies or shares in existence less than 12 months. Furthermore, if the issuer has announced a future dividend declaration (in connection with a merger or otherwise) it must be assumed that such dividend will be paid.

**Execution Pricing:** DOTS execution process whereby Citigroup calculates the initial or final reference price of a DOTS by reference to Citigroup's actual execution price for the purchase or sale of its physical hedge as the case may be. In such cases the DOTS counterparty may direct the form of Citigroup's execution (e.g., limit order, market order, best efforts, etc...) except that the execution order may not be MOO, MOC, time limited VWAP or any other objective price other than full day VWAP. All Execution Pricing trades must be executed at least 20 minutes after the open and at least 20 minutes before the close of regular trading on the relevant exchange.

**Risk-bid Pricing:** DOTS execution process whereby the desk quotes a DOTS counterparty a firm price to initiate or terminate a swap, as the case may be, BEFORE the desk has obtained a firm buy or sell order for its related physical hedge position, if any. In order to ensure a proper audit trail the desk must time-stamp a trade ticket with the share quantity and price for audit comparison to the time-stamp for the hedge position trade.

**VWAP:** The full day volume weighted average price for a particular equity as published by the primary exchange for such equity.

**PROCEDURES:**

**I. General:** The following rules are separated into two categories based on whether the underlying equity is purchased from the counterparty (i.e., crossed-in) or not. No other pricing alternatives may be used other than those described in Section II, III and IV below without prior written approval from the tax department. *Transactions that technically meet these procedures but are outside the principles of this policy, as set out above, should be brought to the tax department for specific review.*

**II. Situations Where the Underlying Equity is NOT Crossed-In from the DOTS Counterparty:**

- Initial Reference Price of DOTS –
- The initial reference price of a DOTS may be based on:
  - \* VWAP subject to a 40% Average Daily Trading Volume limitation;<sup>4</sup>
  - + Risk-Bid Pricing; or

<sup>4</sup> If the equity is acquired by cross-in or risk-bid and the exit is anticipated to be VWAP, any notional amount of the hedge in excess of this amount will need to be disposed of over a multi-day period in order to satisfy this limitation. Thus, notional sizes should be limited with this in mind. VWAP trades (in or out) in excess of the 40% average daily trading volume limit will be considered to be a Cross-in or Cross-out trade, as the case may be. The tax department may be contacted for exemptions from the volume limitation where unusual market events have transpired.

892

- Execution Pricing
  - Final Reference Price of DOTS:
  - The final reference price (including upon early termination) of a DOTS may be based on:
    - VWAP subject to a 40% Average Daily Trading Volume limitation;
    - Risk-Bid Pricing; or
    - Execution Pricing.
  - When utilizing VWAP as the initial or final reference price (including upon early termination) the desk may not directly or indirectly guarantee, pay for any guarantee, compensate the counterparty for its costs or otherwise be involved with the DOTS counterparty obtaining guaranteed VWAP pricing on any acquisition of the referenced equity;
  - All DOTS of this type are subject to the General DOTS Procedures attached hereto as Appendix A.
- III. *Situations Where the Underlying Equity is Crossed-In from the DOTS Counterparty:*
- The initial reference price of a DOTS may be based on the actual prices at which the trading desk purchases the underlying equity from the DOTS counterparty;
  - The final reference price (including upon early termination) of a DOTS may be based on:
    - VWAP subject to a 40% Average Daily Trading Volume limitation; or
    - Risk-Bid Pricing.
  - All DOTS of this type are subject to the General DOTS Procedures attached hereto as Appendix A.

IV. *Pre-Existing DOTS*

- With respect to pre-existing DOTS, the final reference price under the DOTS may be MOC if, and only if, Citigroup is contractually obligated to do so under a pre-existing DOTS;<sup>3</sup>
- Pre-existing DOTS are NOT subject to the General DOTS Procedures but pre-existing equity swaps and CFDs ARE subject to the Interim Equity Swap Guidelines (e.g., such swaps and CFDs are subject to a 1.3% average daily volume limit on the unwind of any hedge position).

<sup>3</sup> A pre-existing DOTS means a DOTS entered into on or before June 1, 2005 (and not extended or materially modified thereafter).

## APPENDIX A – General DOTS Procedures

## L. Opening the DOTS:

- The DOTS must have a minimum term of at least one year;
- The DOTS must not in fact terminate before 45 days have elapsed<sup>6</sup> (if the DOTS is over a basket of equities, no equity name may be removed / replaced in the basket in less than 45 days), unless there has been no ex-dividend date for the relevant equity during the term it has been underlying the DOTS. Termination for this purpose includes Citigroup's participation in an offsetting transaction (e.g. mirror swap) with the DOTS counterparty that effectively eliminates the counterparty's economic exposure to the DOTS;<sup>7</sup> Control groups (e.g., credit, legal, tax, compliance) will retain the ability to force terminations regardless of the time elapsed since the positions were established.
- If the DOTS is a swap, the DOTS must provide for periodic payments (e.g., weekly, monthly – not counting any payment upon termination) and, in fact, at least one such periodic payment must be made during the time period the DOTS is open;<sup>8</sup>
- If the DOTS is a swap, the DOTS must be cash settled only;
- The initial collateral posted by the DOTS counterparty and / or Citigroup must not exceed 30% of the notional amount. Master ISDA CSA and variation margin is permitted;
- The DOTS documentation must not provide the DOTS counterparty with the ability to vote the underlying equities, provide that anyone will vote the equities at the DOTS counterparty's direction or otherwise make the voting ability related to the underlying equities available to the DOTS counterparty;
- The DOTS documentation must clearly state that Citigroup is not required to hold the underlying equity position for any period;

<sup>6</sup> The 45-day period is measured from Trade Date to Termination Date.

<sup>7</sup> It is understood that market movements and other external events may cause Citigroup or DOTS counterparties to seek to unwind DOTS positions in less than 45 days. In such cases the desk must seek a written exception from this policy from the tax department.

<sup>8</sup> The periodic payments for this purpose may be an equity (or change-in-value) payment or a funding payment.

- The DOTS documentation must state that Citigroup will not knowingly sell, directly or indirectly, the underlying equity upon scheduled or early termination of the DOTS to the DOTS counterparty or any affiliate thereof;
- Any equity underlying a DOTS must be a publicly<sup>9</sup> and actively traded, liquid stock; and
- Written tax department approval is required for every DOTS where the underlying equity is an "Approval Required Equity" as defined below in Section V.

## II. *Establishment of Hedge:*

- Where the hedge position is crossed-in from the DOTS counterparty the trading desk may purchase the hedge position from the DOTS counterparty at the prevailing market price;
- Where Citigroup does not cross-in the underlying equity from the DOTS counterparty, if Citigroup chooses to hedge the risk associated with the DOTS, the hedge should be executed during normal market hours on the principal exchange for the given equity at the current market price and NOT:
  - via an execution through an inter-dealer broker;
  - via any objective price (e.g., MOC, MOO) other than the current market price (limit orders are acceptable) or full day VWAP;<sup>10</sup>
  - via a purchase of the securities from any party where the DOTS counterparty directs the source of the purchase (e.g., a "give-up" or "give-in");
  - via a purchase of the securities from the DOTS counterparty or an affiliate or any agent thereof; or
  - by any means where there exists any direct or indirect communication or coordination between the desk and the DOTS counterparty (including any affiliate or intermediary thereof) as to the timing / price of the purchase of the desk's hedge position, if any, and the sale, if any, of the DOTS counterparty's physical equity position.<sup>11</sup>

<sup>9</sup> Publicly traded for this purpose is defined as an equity that trades regularly on a recognized stock exchange. Such exchanges include, but are not limited to, the NYSE, NASDAQ System and any stock exchange registered with the U.S. Securities and Exchange Commission as a national securities exchange; the London Stock Exchange and any other recognized investment exchange within the meaning of the Financial Services Act 1986 or the Financial Services and Markets Act 2000; and any other similarly regulated exchanges of other jurisdictions.

<sup>10</sup> Citigroup, as an entity, may not purchase guaranteed VWAP pricing from another financial institution.

<sup>11</sup> It is understood that there will be communication between the DOTS counterparty and the desk involving timing and pricing of the opening of the DOTS, which may in fact impact the timing, and price of the purchase of a hedge position in the public markets.

T

**III. Terminating the DOTS:**

- The DOTS may be terminated (including at term or by early termination) with a final reference price determined by:
  - VWAP subject to a 40% Average Daily Trading Volume limitation;
  - Risk-Bid Pricing; or
  - Execution Pricing, assuming the equity was not originally Crossed-In.

**IV. Disposition of Hedge Position:**

- Citigroup's disposition of its hedge position, if any, must be executed on the principal exchange or market for the given equity at the current market price or in an effort to beat daily VWAP, and NOT:
  - In excess of 40% of the average daily trading volume of such equity if the DOTS terminated at VWAP;<sup>12</sup>
  - via an execution through an inter-dealer broker;
  - via any objective price (e.g., MOC, MOO, limited time VWAP) other than the current market price (limit orders are acceptable) or full day VWAP;
  - via a sale of the securities by any party where, directly or indirectly, the DOTS counterparty directs or indicates the identity of the purchaser (e.g., a "give-up");
  - via a transfer of the securities, directly or indirectly, to the DOTS counterparty, an affiliate, or an agent or nominee thereof;
  - under circumstances where there exists arrangements or understandings by which the DOTS counterparty is able to reacquire the referenced equity from Citigroup directly or indirectly through any intermediary; or
  - within the final twenty minutes of official exchange trading on any day on the relevant exchange.

<sup>12</sup> If the position is in excess of this amount it must be disposed of over a multi-day period so that this limitation is satisfied.

V. *Approval Required Equity for DOTS:*

- The trading desk must seek prior written tax department approval before entering any DOTS where the underlying equity may be:
  - A partnership interest including an MLP (Master Limited Partnership) interest;
  - Equity in a REIT;
  - An interest in a hedge fund;
  - A Dutch equity; or
  - Any equity where the issuer jurisdiction applies the maximum withholding tax rate and requires the beneficial holder who would otherwise be entitled to a reduced rate of withholding (by virtue of a treaty or other exemption) to file for a reclaim or apply for a refund of the withholding tax (e.g., a Swiss equity).

VI. *Special Rules for Non-U.S. Equities:* Where the underlying equity is a non-U.S. equity:

- The transaction must be a customer transaction as opposed to a proprietary transaction (i.e., there must be a customer counterparty and the trade must be a normal and customary dealer type activity);
- The relevant legal requirements of the jurisdictions involved regarding beneficial ownership and / or treaty benefits must be satisfied and appropriate documentation obtained; and
- The transaction must be pre-tax profitable treating any withholding tax as an expense of the trade and taking into consideration any and all related expenses, including internal funding costs. The trading desk is responsible for maintaining complete and accurate records of such profitability on a trade-by-trade basis. Such records will be audited by both the tax department and internal audit and thus, the manner in which such records are maintained should lend itself to such review.

Any exceptions from these procedures must be approved in writing by the tax department prior to execution.

898

## APPENDIX B – Tax Risk Assessment Table

Tax Risk Assessment for Delta One Derivative Transactions<sup>1</sup>

	Most Risk						Least Risk	
	Cross In and Cross Out <sup>2</sup>	Cross In and Execution Out	Cross In and VWAP Out	Cross In and Risk-Bid Out	Execution In and Execution Out	Execution In and VWAP or Risk-Bid Out	VWAP or Risk-Bid In and VWAP or Risk-Bid Out	VWAP or Risk-Bid In and Execution Out
Allowable Under Current DOT Policy?	No	No	Yes	Yes	Yes	Yes	Yes	Yes
Volume Limit	None	None	40% of ADTV <sup>3</sup>	None	None	40% of ADTV for VWAP <sup>3</sup>	40% of ADTV for VWAP <sup>3</sup>	40% of ADTV for VWAP <sup>3</sup>

Re: Citigroup Global Markets, Inc., IDR IE-1 and 2  
Citigroup Financial Products, Inc., IDR IE-2 and 3  
Citigroup Global Markets Limited, IDR IE-2 and 3  
Forms 1042 (Tax Years 2003, 2004 and 2005)

Gentlemen:

In light of the breadth of the above-referenced IDRs and the attendant volume of information and likely time delay that would be necessary to prepare our responses, over the last few weeks we have been discussing with you and your colleagues at the IRS the possibility of responding to such IDRs in stages. Based on the discussions at our most recent joint meeting on 2/09/07, we understand that the IRS is interested in receiving the information discussed below as quickly as possible. If our understanding is correct, we estimate that we would be able to provide the information discussed below to you by 02/28/07. We would await any further requests from you for additional information with respect to such IDRs.

This letter, therefore, is intended to respond to questions raised in [REDACTED] memorandum dated 1/17/07, regarding the above-referenced IDRs. Citigroup Global Markets, Inc., Citigroup Financial Products, Inc., and Citigroup Global Markets Limited are all affiliates of Citigroup, Inc. (collectively, "Citigroup"). The questions from [REDACTED] memorandum are in *italics* with our responses in plain type:

*We are proposing the following as a means of addressing the above IDRs in stages. Taxpayer is to provide the following for each of the above:*

- a) *A written statement attesting to whether you are engaged in a strategy/transaction(s) as requested in the IDRs.*

Permanent Subcommittee on Investigations  
EXHIBIT #45 - FN 299

Citigroup Global Markets Inc.

CITI\_PSIWHTAX001336

February 20, 2007  
Page 2

— = Redacted by the Permanent  
Subcommittee on Investigations

**Response:** Yes. Based on our understanding of the transactions (as discussed at our 2/09/07 meeting), Citigroup engaged in such transactions during 2003-2005.

As discussed at our 2/9/07 meeting, we understand that you wish to focus your examination on transactions in which Citigroup acquired stock of a U.S. publicly traded corporation and, along with the acquisition, executed a total return swap (or similar notional principal contract) that referenced such stock, during a period in which dividends were paid on such stock, with a foreign counterparty.

Under a total return swap, Citigroup agrees to make payments to the counterparty equal to the price appreciation and any dividends for the referenced stock, and the counterparty agrees to make payments to Citigroup equal to the price depreciation in the stock and a financing payment (typically, based on LIBOR). Citigroup enters into total return swaps with a wide range of customers in its capacity as a dealer in a broad range of over-the-counter derivative investments. As a dealer, Citigroup typically hedges its exposure to the market risks attendant to any derivative contracts into which it enters. Citigroup's most straightforward hedge of a total return swap under which Citigroup pays total returns on a stock to a counterparty (a "short" swap, from Citigroup's perspective) is for Citigroup to acquire the underlying stock.

Based on our understanding that your examination would focus on total return swaps (or similar notional principal contracts) on U.S. equities with a foreign person during a period when dividends were paid on the referenced U.S. stock, our list of transactions (described in (e) below) will include all such total return swaps entered into by Citigroup that were outstanding during the period 2003-2005. However, as discussed, our list will not include other transactions described in your 1/11/07 IDR, such as, for example, short sales or security lending transactions, even though Citigroup also engaged in such transactions, because we believe these other transactions are not the focus of your present examination in connection with these IDRs.

*b) Original documentation that describes and discusses the strategy/transaction(s).*

**Response:** We understand your request for "original documentation" to refer to contemporaneous transactional documents. Accordingly, attached is a sample ISDA Agreement for a U.S. Equity Total Return Swap, which describes the basic components of the transaction. We have other contemporaneous and post-transactional documents relating to total return swaps; please clarify which, if any, of these documents you might be seeking.

*c) Summary of the tax benefits associated with the strategy/transaction(s).*

**Response:** Foreign persons may participate in the economic performance of a U.S. stock by entering into a total return swap rather than acquiring the stock itself. Payments received by foreign persons from a total return swap that references U.S. stock are also generally not subject to U.S. withholding tax (a U.S. tax benefit).

February 20, 2007  
Page 3

— = Redacted by the Permanent  
Subcommittee on Investigations

Persons that enter into total return swaps obtain an economic position similar to that of a leveraged position in the stock without being subject to margin restrictions applicable to certain secured financing and without incurring more expensive unsecured financing (a non-tax benefit). Moreover, the terms of the implicit financing are fixed for the life of the swap (another non-tax benefit). On the other hand, such persons participating in the economics of a U.S. stock through a total return swap do not have voting rights with respect to the referenced shares (a non-tax detriment), and such persons accept the credit risk of the dealer counterparty (in this case Citigroup) (another non-tax detriment).

- d) *Support that there exists a reasonable basis that the strategy/transaction(s) operates within applicable tax law (statutory reference) including any analysis prepared by the company or for its use.*

**Response:** In general, Citigroup did not withhold U.S. tax on payments to foreign persons on total return swaps on the basis of Treas. Reg. § 1.863-7, which provides that payments to foreign persons on notional principal contracts generally are foreign source and, thus, exempt from withholding. However, based on a post-transaction review of compliance with internal policies for total return swaps, Citigroup discovered that, with respect to certain swaps, Citigroup and the foreign counterparty appeared to have an understanding, at the inception of the transaction, regarding delivery of the referenced stock from the foreign counterparty to Citigroup upon entering into the swap and the redelivery of the stock by Citigroup to the foreign counterparty upon termination of the swap. Because of this apparent understanding, Citigroup decided to pay U.S. withholding tax on the dividend equivalent payments for these swaps. Citigroup did not pay U.S. withholding tax on dividend equivalent payments for swaps for which there did not appear to be such an understanding.

As discussed at our 2/9/07 meeting, we are deferring our response to your request for "any analysis prepared by the Company or for its use," pending further clarification of this request.

- e) *A specific counter-proposal as to what documents you will provide as a substitute for the items requested per the above IDR's.*

**Response:** Citigroup proposes to compile a list of all total return swaps described in response (a) above that were outstanding during any portion of the period from 2003-2005, and for which Citigroup may have hedged by acquiring the underlying stock. The list will identify the referenced U.S. equity, the number of shares involved in the transaction, the inception date and termination date of the swap, and the amount of dividends paid on the referenced shares during the term of the swap. Citigroup's list will include and identify those swap transactions for which Citigroup paid U.S. withholding taxes, as well as other types of transactions. We estimate that the list will be submitted to you by 2/28/07.

As discussed at our 2/9/07 meeting, Citigroup's list will not, at this time, include the name of the foreign counterparty. Similarly, as we discussed, we are deferring our response to

906

Subcommittee on Investigations

that portion of CGMI's IDR #1.E.2, CGML's IDR #1.E.3 and CFP's IDR #1.E.3 which requests documents that, "in the aggregate," identify accountholders who engaged in the transactions at issue, pending your clarification of this request. Additionally, if you request the specific identity of the accountholders who engaged in these transactions, we respectfully ask that you issue a summons in connection with this request for the reason we discussed.

Please let me know if you have any questions about our above understandings, our above counter-proposal, or any other matter related to our responses to your questions.

Sincerely,

  
Jack Burns

From: Jack Burns

As discussed, we are continuing to provide a list of transactions described in our 2/20/07 letter on a rolling basis.

As you know, our first submission was the list of transactions that were executed during the relevant time period by our Equity Finance business unit (which is the unit that entered into the largest number of total return swaps over U.S. equities).

The list from the first submission was comprised of two parts. The first portion of the list represented all of the transactions for which U.S. withholding taxes were paid. The second portion of the list represented transactions for which no U.S. withholding taxes were paid. With respect to the transactions in the second portion of the list, dividend information was not provided at that time, as we were still accumulating that information.

Enclosed as our first supplemental submission is the list of transactions executed during the relevant time period by our Equity Finance business unit, including dividend information, for which no U.S. withholding taxes were paid.

Upon information and belief, we believe this list to be substantially complete. We are continuing our review of these transactions, however, and there may be a limited number of transactions that will either be deleted from, or added to, this list. If it is necessary to delete transactions that are non-responsive to the IDR (or add transactions that are responsive), we will supplement our list with that information as it becomes available.

We will keep you informed as to the status of our ongoing submissions with respect to transactions executed by other business units.

*Jack Burns*

## Chapter 1: General Report: GAARs

### Author

Richard Krever

### 1.1. Introduction

While they are very recent additions to some countries' tax laws, GAARs have played a central role in other tax systems for well over a century. <sup>[1]</sup> Quite possibly no other feature of tax law provides a better insight into a nation's tax psyche than its anti-avoidance rules. The intersection of general anti-avoidance rules (GAARs) – as well as their ancillary specific anti-avoidance rules (SAARs) – with operative provisions of tax law reveals much about all aspects of a country's tax system: citizens' tax morale; judicial perspectives on taxation and legal interpretation; drafters' inclinations towards technical or principled drafting; and legislators' willingness to confront politically sensitive issues or their tendency to delegate the tough decisions to administrators and courts. A comparative analysis of the role of GAARs (or the lack of any GAAR) in tax systems such as that found in this volume can thus offer unique perspectives on tax law across jurisdictions. <sup>[2]</sup>

At the same time, comparative study of GAARs raises challenges rarely encountered in other areas of tax law. While some tax concepts – transfer pricing, thin capitalization and permanent establishment, for example – have common meanings across jurisdictions and tax systems, even if the details vary at the margins, there appears to be no universal understanding of what constitutes a GAAR or, for that matter, what constitutes "tax avoidance", the notional target of a GAAR. At one end of the spectrum, the avoidance label is limited to convoluted and, at best, quasi-legal transactions verging on evasion; <sup>[3]</sup> at the other, legitimate choices between alternatives yielding different tax outcomes can amount to avoidance in some circumstances.

There is an equally wide spectrum of definitions of a GAAR. In most countries, the GAAR takes the form of a statutory rule, albeit with an extremely large range of constructions. This is not always the case, however. In a jurisdiction lacking a statutory rule, a doctrinal approach based only on judicial interpretation might be considered a GAAR. <sup>[4]</sup>

There is similarly a divergence of views on the merits of, or drawbacks to, reliance on a GAAR as a tool to safeguard the integrity of a tax system. The most commonly cited drawbacks are uncertainty for taxpayers and unfairness resulting from selective application. The two perceived problems are related. Because a GAAR is only applied after the fact, taxpayers cannot make investments predicting particular after-tax rates of return – a key expectation essential to the efficient allocation of capital in any market economy – as they cannot know with certainty what the tax consequences of their intended actions will be after possible application of a GAAR. <sup>[5]</sup> For the same reason, the law will apply differently to different taxpayers in the same circumstances. Unlike a substantive tax rule, which sets out general rules for all taxpayers in a particular situation, a GAAR applies to each case separately, and its elements, including the taxpayer's purpose (to the extent this is incorporated into the rule), must be considered separately for each case. <sup>[6]</sup> Only a portion of the pool of taxpayers who may have entered into similar transactions are subject to audit and only some of those transactions might be identified as transactions to which the GAAR might apply, with the rule applied successfully only to a portion of this subset. Equal application to all taxpayers of a rule that looks at the totality of circumstances in each case – including, as it does in most instances, the motives of each particular taxpayer – is not possible.

Commentators sympathetic to the use of GAARs view these concerns as exaggerated. While they may have some legitimacy prior to the first GAAR cases being heard, proponents of GAARs argue, once the outcomes of attempts to apply the GAAR are known, the rule can act as a supplement to substantive measures by showing how particular types of arrangements are likely to be treated under the rule, inhibiting behaviour similar to that known to be caught. To the extent that the concerns of critics are valid, supporters might further argue, the rule is nevertheless necessary to protect the integrity of the tax law, given the inherent limitations on drafters' ability to anticipate every possible alternative transaction open to taxpayers. <sup>[7]</sup> The most realistic of supporters concede that there is inherent uncertainty arising from a GAAR but argue that this is a price that has to be paid in the interest of the larger goal of protecting the integrity of the tax base.

1. See, for example, [New Zealand](#), which has had a GAAR for 139 years.

2. This general report analysis refers to chapters in this volume on specific jurisdictions by use of the name of the country covered in the chapter.

3. Russian jurisprudence, for example, merges avoidance and evasion into a single issue; see [Russia](#).

4. See, for example, [Norway](#) and [Russia](#).

5. See, for example, [Poland](#). It has been suggested that the latitude afforded tax authorities by a GAAR is fundamentally incompatible with the certainty that Adam Smith saw as a cornerstone of legitimate taxation; see [Ireland](#).

6. See [Germany](#).

7. See [Finland](#).

## GAARs – A Key Element of Tax Systems in the Post-BEPS Tax World - Chapter 1: General Report: GAARs - Books (Last Reviewed: 15 December 2015)

Whatever their merits or flaws, there is no doubt that the lack of precise borders in a GAAR transfers great power and responsibility to the adjudicators. Supporters of a GAAR have to hope that the judges will exercise those powers, in the words of a minister who oversaw the introduction of a GAAR in the Netherlands, “as good men”. [8]

While GAARs have proliferated in modern times, they are not universal and proposals to introduce GAARs sometimes flounder in the face of resolute opposition, including that of the legislature. [9] Jurisdictions reluctant to adopt GAARs delegate to the courts the task of identifying cases where the taxpayer’s characterization of transactions could or should be rejected [10] or rely on specific legislative responses where the courts decline to look beyond legal form even where transactions were carried out in a particular form with the clear objective of tax avoidance. [11] In the rarest cases, there is no effective remedy in the absence of a GAAR. [12]

Somewhat ironically, the absence of a GAAR in a jurisdiction may be interpreted by courts as a sign that the legislature is willing to tolerate avoidance when other jurisdictions with similar legal backgrounds have adopted GAARs. In these cases, it may be an implicit judicial invitation that prompts enactment of a GAAR. [13] Also, ironically, adoption of a GAAR may have the opposite effect: there is a risk that adoption of a statutory GAAR will inhibit courts from adopting more robust interpretation doctrines to reduce opportunities for avoidance on the assumption that the legislature has fully occupied the anti-avoidance field. [14]

### 1.2. Models

While the forms of GAARs vary widely, they generally fall into four groups.

One group, the “acts and benefits” group, comprises rules that allow the tax authorities to identify a transaction or series of transactions that had the purpose or (more rarely) effect of providing a tax benefit and then recompute the taxpayer’s liability on the basis of a hypothetical transaction that the tax authorities surmise would have been the one used had the taxpayer not followed the tax-effective path it did. GAARs in this group look at acts carried out and benefits realized, without the need to identify an economic substance. [15]

A second group, usually with a statutory base but on occasion derived solely from judicial practice, [16] sets out rules that mandate an interpretation and application of tax law to the economic substance of a transaction (or series of transactions) rather than the legal form. [17] The rule will normally allow the tax authorities to reassess the taxpayer on the basis of a hypothetical legal transaction that better reflects the underlying economic substance. While almost all jurisdictions with a statutory substance over form rule regard the rule as a GAAR, [18] this characterization of the rule is not universal. [19] Nor is the view that a judicial substance over form rule (or variations such as the “true import” of an arrangement) amounts to a GAAR. [20]

A possible third model, it is argued by some, is a judicial “GAAR” based on the adoption by the courts of a broad abuse of law doctrine. [21]

A fourth model is a statutory abuse of law model that applies where a taxpayer adopts a fictitious arrangement or one that is valid in law but used to defeat the intention of the tax legislation. [22]

Whether a GAAR takes the form of the classic tax benefit identification rule or an economic substance or abuse of law rule, it can only be effective if it allows a reassessment on the basis of a hypothetical alternative transaction different from the legal form chosen by the taxpayer to minimize tax. In the case of an explicit reconstruction rule, the tax authorities are allowed to substitute an appropriate arrangement for the one used by the taxpayer. An economic substance rule, in contrast, opens the door to assessment on the basis of applying the tax law directly but interpreting the circumstances to fit into the law.

The difference between the two can be illustrated with the example of a taxpayer entering into a complex set of arrangements to avoid a loan having the form of a debt. Under the explicit reconstruction rule, the tax authorities would be allowed to substitute a fictional transaction (a direct loan) for the arrangements used by the taxpayer. Under the economic substance approach, the

8. See the [Netherlands](#).

9. See, for example, [Mexico](#) and, initially, the [United Kingdom](#) (the UK position has since reversed, and a GAAR was adopted in 2013).

10. See, for example, [Brazil](#). [Croatia](#) has an economic substance provision, but some argue this does not amount to a GAAR.

11. See, for example, [Denmark](#).

12. See, for example, [Mexico](#).

13. See, for example, [Ireland](#).

14. See [Australia](#).

15. The acts and benefits GAARs are mostly found in Anglo jurisdictions such as [Australia](#), [Canada](#), [India](#), [New Zealand](#), [South Africa](#) and the [United Kingdom](#), although some other GAARs, including China’s and the current (but not the proposed replacement) Italian GAAR, also satisfy this definition.

16. In one case, the judicial substance over form test was subsequently codified; see [United States](#).

17. In the case of Turkey, this is labelled the real substance; see [Turkey](#).

18. See, for example, [Switzerland](#).

19. See, for example, the debate in [Korea](#).

20. See, for example, [Sweden](#), where the true import alternative is considered quite distinct from the GAAR.

21. See, for example, the [Czech Republic](#).

22. See, for example, [France](#).

## GAARs – A Key Element of Tax Systems in the Post-BEPS Tax World - Chapter 1: General Report: GAARs - Books (Last Reviewed:15 December 2015)

tax authorities can look at the totality of the arrangements and find that there actually is a loan, albeit by a somewhat complex route, and apply the tax law for debt directly. Commonly, the power of the tax authorities to reassess on the basis of an alternative hypothetical transaction is clear, whether it is based on an explicit or an implicit construction of the GAAR. In some rarer cases, however, there is debate over how the GAAR operates in this respect. <sup>[23]</sup>

### 1.3. When is the GAAR used?

While GAARs differ significantly in form and language, there are some remarkable similarities between the types of cases in which tax authorities have sought (not always successfully) to invoke the GAAR. These appear to fall into three broad categories.

The most common situation is where the tax law offers, on its face, alternative tax outcomes depending on the form or structure of a transaction, and taxpayers have arranged affairs to enjoy the reduced (or nil) taxation available with one alternative rather than adopt the version, preferred by the tax authorities, that would incur a higher tax liability. These are not cases where the law offers a concession and the taxpayer has, in response to the government subsidy for targeted activities, invested or acted as the government sought. Nor are they cases where the law provides a tax advantage to achieve a tax policy outcome such as avoiding double taxation <sup>[24]</sup> or features structural asymmetries such as providing lower capital gains tax rates for taxpayers who hold assets for longer periods or providing different tax rates for taxpayers who choose to operate through different types of companies. <sup>[25]</sup> Rather, they are cases where a taxpayer changes the form of a transaction to shift from one tax rule to another.

To achieve the shift, the taxpayer often substitutes a multi-step and multi-party arrangement for the simple transaction that attracts a higher tax burden. For example, rather than lend money directly to a borrower, a lender might interpose a company and convert what would have been taxable interest paid to the lender into tax-free inter-corporate dividends from the interposed company. <sup>[26]</sup> Similarly, rather than buy immovable property or shares directly, a taxpayer may use an intermediary company to acquire the property or shares and sell interests in the intermediary company rather than the underlying assets if capital gains on the sale of interests in an intermediary company fall outside the scope of the tax law. <sup>[27]</sup> Other examples include the interposition of entities between a service provider and clients so the income can be diverted to related individuals facing lower marginal tax rates, <sup>[28]</sup> the use of an interposed entity to avoid social security taxes otherwise payable in respect of employees <sup>[29]</sup> and the creation of an interposed entity between partners and clients to provide a vehicle for distribution of tax-free benefits (by way of interest-free loans) to the former partners. <sup>[30]</sup> A further example is the creation of intellectual property, such as a copyright, to convert remuneration for personal labour services to property rights that can then be transferred to an interposed entity so the income it generates is diverted to related persons in lower tax brackets. <sup>[31]</sup>

In the second group of tax avoidance cases to which a GAAR is sometimes applied, the taxpayer seeks to shift a transaction from one tax rule to another not by establishing alternative structures and arrangements but simply by relabelling a transaction in a different form. For example, if lower tax liabilities apply when a person providing labour services is a contractor than if the person is an employee, the parties might agree to substitute a contract calling the person an independent contractor rather than an employee, without any change to the actual working conditions. <sup>[32]</sup> Similarly, an investor may fund a company by way of what is described on paper as debt but which is in fact equity with a variable “interest” rate that is actually based on the profits of the so-called borrower. <sup>[33]</sup> In theory, the arrangements could be attacked under the civil law – tax authorities could show that what seemed to be a loan was in fact an equity investment or could have a purported contractor agreement declared a sham. The problem with this approach is that it lacks any reconstruction rule that could be used as the basis for reassessment by reference to a substitute arrangement. Relying on a recharacterization of the transaction, the tax authorities could alter the assessment of the taxpayer in respect of the issue in dispute. It may be much more difficult, however, to extend that characterization to all the consequential issues that would follow in respect of the taxpayer and all other parties to the transaction. From the tax authorities’ perspective, a GAAR with a provision to deal with the consequences of recharacterization is the preferable tool for attacking the arrangement.

A third category of cases in which a GAAR can be used is where taxpayers seek to exploit literal interpretations of rules accepted by courts that are inconsistent with the purpose of those rules. For example, all tax laws allow deductions for expenses incurred

<sup>23.</sup> For example, in [Austria](#), one school of thought sees the GAAR as having an independent reconstruction power, while another sees it as authorizing interpretation on the basis of an economic substance approach.

<sup>24.</sup> See, for example, [Norway](#).

<sup>25.</sup> See, for example, [Portugal](#).

<sup>26.</sup> See, for example, [Canada](#) and [Portugal](#).

<sup>27.</sup> See, for example, [China](#) and [Croatia](#).

<sup>28.</sup> See, for example, [New Zealand](#).

<sup>29.</sup> See, for example, [Russia](#).

<sup>30.</sup> See, for example, [South Africa](#).

<sup>31.</sup> See, for example, [South Africa](#).

<sup>32.</sup> See, for example, [Hungary](#).

<sup>33.</sup> See, for example, [India](#).

## GAARs – A Key Element of Tax Systems in the Post-BEPS Tax World - Chapter 1: General Report: GAARs - Books (Last Reviewed:15 December 2015)

to derive income so only net gains are subject to tax. Consistent with this goal, dual-purpose expenses incurred only in part to derive income and in part to achieve a tax goal unrelated to derivation of income only partially meet the threshold for deductibility. A GAAR could be used to overcome an interpretation of the law that ignored the aim of the deduction section and instead allowed a deduction for expenses that deliberately exceed expected income to achieve other tax goals. [34]

### 1.4. Taxpayer's purpose

GAARs cannot be used by tax authorities to substitute alternative hypothetical arrangements simply because a higher tax alternative exists. The trigger for application of a GAAR is almost always a subjective test – an impugned transaction or arrangement will be subject to the GAAR if the taxpayer's purpose in using the transaction or arrangement under attack was to avoid tax. While the GAAR may set out objective indicators to be used in determining the taxpayer's purpose [35] or an objective limb may be tacked onto the GAAR, [36] at the end of the day, the taxpayer's purpose usually needs to be proved or disproved. [37] Although the concept of a "purpose" sounds inherently subjective, it can be fashioned in a more objective manner by, for example, adopting an objective test such as whether it is reasonable to conclude the taxpayer's main purpose was to obtain a tax benefit. [38]

The requirement for a tax reduction purpose before the GAAR can be applied seems to be present even in cases where the law makes no mention of purpose and even in a non-statutory GAAR based on judicial substance over form doctrines. [39] For example, if the GAAR is triggered whenever the form used by the taxpayer does not conform to the ultimate economic substance of the transaction, read literally, the GAAR would apply even to cases where the taxpayer mistakenly adopted a form with no intention of reducing a tax liability. A provision of this sort will nevertheless commonly be read down and interpreted as requiring an intention to reduce tax before it is applied. [40] The argument that tax law should be wholly objective in nature, with no room for subjective intent in a GAAR, [41] has not found traction in practice.

Among other things, the taxpayer's purpose will depend on how broadly the impugned transaction is defined. The ultimate purpose of most transactions is commercial, apart from a limited group of avoidance schemes that generate after-tax profits when they would yield real-world economic losses. Taxpayers can almost always show that the ultimate goal of the arrangements was an economic outcome – a purchase, a sale, an investment, etc. The primary tactic of tax administrators, therefore, is to look not at the commercial goal of the entire scheme but rather to assert that there is no valid commercial explanation for a subsidiary step or series of steps undertaken for tax minimization reasons. [42] The distinction is between the aim of achieving a commercial outcome and the goal of minimizing tax by pursuing a particular path to achieve the broader outcome. [43]

There is wide variation in the threshold level of the avoidance "purpose" necessary to trigger a GAAR. Relatively rare, but not unknown, are thresholds that trigger the application of a GAAR only in cases that have no plausible rationales other than obtaining a tax benefit, that is, where this is "essentially" the purpose of a transaction [44] or the "sole" purpose of the arrangements [45] or the "decisive" (the only or by far the most important) reason for the transactions. [46] An alternative high threshold construction can state that the GAAR applies only to transactions that have "no valid commercial reasons". [47]

The need for a very high or exclusive tax avoidance motive could also be stated in a negative fashion: the GAAR will not apply if there is a business purpose as well, even if it is a limited business purpose. [48] The original version of the EU's GAAR included in the CCCTB proposal, since modified, adopted a "sole" purpose tax avoidance test for application of the GAAR. [49] However, the norm is for the GAAR to apply if obtaining a tax benefit was the "main" or "primary" or "greater" purpose of a taxpayer. [50]

In some cases, it may be necessary to read the purpose test for triggering the GAAR in the context of the entire GAAR to ascertain the true threshold. For example, the apparently high threshold of a main or sole purpose test can be mitigated if the GAAR is

34. See, for example, [Germany](#).

35. See, for example, [Australia](#).

36. See, for example, the [Netherlands](#).

37. In one case, there is no explicit or implicit reference to purpose in a GAAR, only an authorization for the tax authorities to recharacterize a transaction in accordance with its real substance; see [Turkey](#). In practice, however, the will of the taxpayer becomes an element in the application of the GAAR.

38. See, for example, the [United Kingdom](#).

39. See, for example, [Norway](#).

40. See, for example, [Finland](#).

41. See, for example, [Germany](#).

42. See, for example, [Spain](#).

43. See, for example, [France](#).

44. See, for example, [Liechtenstein](#) and [Italy](#). The latter is being changed from solely to essentially.

45. See, for example, [France](#).

46. See, for example, the [Netherlands](#).

47. See, for example, [Italy](#). The current rule is to be replaced. However, the replacement GAAR may be interpreted as enjoying an equally high trigger threshold, applying to transactions that lack any economic substance.

48. See [Norway](#).

49. The proposal has since been changed to the main purpose.

50. The Portuguese requirement of wholly or mainly implies a possibly higher standard than simply mainly in that jurisdiction; see [Portugal](#).

## GAARs – A Key Element of Tax Systems in the Post-BEPS Tax World - Chapter 1: General Report: GAARs - Books (Last Reviewed:15 December 2015)

constructed in such a way that it assumes the threshold is met using objective indicators and shifts the onus onto the taxpayer to prove otherwise. <sup>[51]</sup>

In some cases, the purpose element of the GAAR is implicit rather than explicit, with the provision applying, for example, where there is no reasonable business purpose for the form taken. <sup>[52]</sup> In others, the level of unacceptable purpose is unstated – the law simply refers to the purpose of avoiding tax – but this is interpreted as meaning the main purpose of the taxpayer. <sup>[53]</sup> There are, in addition, cases where the law is silent and “the jury is still out” on what level of avoidance purpose the courts will need to recognize for the GAAR to apply. <sup>[54]</sup>

While GAARS usually turn on a single explicit or implicit purpose test, one of the most recent GAARs adopted utilizes a two-pronged test with both a positive purpose limb and a second, tainted element, negative limb. To invoke the GAAR, the tax authorities have to show, first, that the main purpose of the targeted transaction is to obtain a tax benefit and, second, that the arrangement fits into one of four categories of tainted transactions. <sup>[55]</sup> It remains too early to know how this approach will operate in practice compared to more traditional approaches.

The fact that purpose is central to the operation of even a non-statutory GAAR developed by the courts in the form of interpretation doctrines <sup>[56]</sup> illustrates the importance of purpose in almost all GAAR systems and the assumption in most systems that GAARs should only be invoked where it can be shown that transactions or arrangements were adopted mostly or exclusively for the purpose of reducing tax rather than for a commercial or private reason.

The most significant deviation from the general rule that GAARs are implicitly or explicitly triggered by the taxpayer’s tax saving purpose in adopting a particular course of action or a particular set of arrangements is found in a very small number of GAARs that may be triggered both by *purpose* and *effect*. These GAARs look to the purpose behind the arrangements under attack and also, as an alternative, whether the effect of the transactions was obtaining a tax benefit, whatever the taxpayer’s motivation might have been. <sup>[57]</sup> On their face, the “effect” tests look to be easier to apply from the perspective of the tax authorities, as there is no need to rely on evidence of the taxpayer’s subjective intent or objective factors that could point towards particular motives.

However, the application of the “effect” test confronts the same problem raised by the purpose test in terms of how narrowly the inquiry needs to be focused. Apart from the rare cases where taxpayers turn economic losses into after-tax gains through mismatches (for example, non-recognition of some income and full recognition of related expenses), most schemes subject to GAARs are based on actual commercial transactions. The end goal is legitimate – a takeover, an investment, a sale, etc. – and the only issue is whether the steps taken to secure the outcome were deliberately chosen to reduce taxes. A GAAR that relies on purpose can only be invoked if it is restricted to some tax-driven elements of the overall plan. Similarly, the overall *effect* of the transaction will be a commercial outcome – the taxpayer will have acquired the target entity, divested the assets it wanted to sell, shifted ownership from one entity to another, and so on. A GAAR that relies on effect will also only be effective if it is possible to isolate particular transactions or arrangements and find that the effect of those elements, viewed in isolation, was a reduction in tax liability, even though the effect of the entire arrangement was a commercial outcome.

### 1.5. Counterfactual

The importance of a counterfactual to the success of a GAAR cannot be understated. There is no tax recouped simply by striking down a tax-motivated transaction or arrangement on the authority of a GAAR. Tax can only be recovered if the tax authorities are allowed to develop a counterfactual to the tax-motivated events that actually took place and assess on the basis of that hypothetical transaction. This is equally true for classic GAARs that look for transactions that were used to generate a tax benefit and “substance over form” GAARs that recharacterize the transactions actually used as another transaction that yields the same economic outcome. Tax can only be assessed on the basis of a specific transaction, be it a hypothetical alternative or a recharacterized transaction that achieves the same economic outcome as the steps in fact taken. A fully effective GAAR must also envisage a hypothetical “nil transaction” – the fiction that the taxpayer would not have entered into any transaction if the actual one undertaken is disregarded for tax purposes. <sup>[58]</sup>

GAARs differ dramatically in terms of the leeway they grant authorities for developing the counterfactual transaction to be taxed. The trend has been to enhance the power of tax authorities to use counterfactuals as the basis for assessment. Thus, for example, under the GAAR formerly used in Belgium, taxpayers were able to defeat counterfactuals by showing that they had

51. See, for example, [South Africa](#).

52. See, for example, [China](#).

53. See, for example, [Finland](#).

54. See, for example, [Serbia](#).

55. See [India](#).

56. See [Norway](#).

57. See, for example, [New Zealand](#) and, in respect of the GST, [Australia](#).

58. See [Ireland](#).

## GAARs – A Key Element of Tax Systems in the Post-BEPS Tax World - Chapter 1: General Report: GAARs - Books (Last Reviewed:15 December 2015)

legitimate commercial aims in achieving particular legal outcomes that are not replicated in any hypothetical arrangement. Recent amendments have shifted the balance of power to the tax authorities, who can now “presume” alternatives for tax-motivated transactions, with the onus on the taxpayer to show its choice of arrangements was not tax motivated.

In every case, however, the question remains whether the alternative hypothetical transaction that the tax authorities seek to substitute for the one that took place in legal form at least is the most appropriate alternative. [59] Taxpayers may wish to argue that, if they had known the tax benefits from the transaction they entered into would be cancelled, they would have engaged in a transaction or series of transactions different from that postulated by the tax authorities. To address this problem, the laws are interpreted in most cases to shift the onus onto the taxpayer to show the tax authorities’ counterfactual is not the one that would have been used to realize the economic outcome that was achieved. In the event of doubt, this priority of the tax authorities’ hypothetical may be legislated. [60]

### 1.6. Abuse of the anti-abuse rule

GAARs are adopted as a means of stymying arrangements made by taxpayers that abuse the form, intent or structure of tax laws to reduce their tax liability. GAARs are subject to the same interpretative issues as other parts of tax law, however, and just as taxpayers have found ways of avoiding tax through weaknesses in the substantive tax law, tax authorities could try to find ways to abuse the GAAR and apply it to increase tax liability beyond the level envisaged in the substantive law. [61] A GAAR intended to apply where taxpayers have real net profits and no taxable income thanks to tax avoidance, for example, has been used by tax authorities to assess a taxpayer with large gross proceeds but no net profit as a result of poor business judgments. [62] Assessing on the basis of cash movements rather than actual profits might be considered an abuse of the anti-abuse rule.

### 1.7. GAARs and SAARs

All tax jurisdictions have SAARs that can operate alongside a GAAR. [63] GAARs and SAARs appear to be quite compatible – there are no reported conflicts between the two. Where a SAAR applies to the particular facts of an arrangement, it will be used in preference to the GAAR as a matter of practice and, in one case, [64] legislative fiat. On the other hand, tax authorities might be inclined to rely on the GAAR in cases where taxpayers have deliberately structured a transaction to circumvent a SAAR. [65]

One reason for the apparent compatibility of GAARs and SAARs is the fundamentally different goals and *modi operandi* of the two types of rules. A GAAR dismantles, for tax purposes, arrangements or agreements that can continue to be effective for civil law purposes and substitutes hypothetical arrangements and agreements in their place to recompute tax liability. A SAAR, in contrast, generally accepts the legitimacy of transactions constructed for tax purposes but negates the tax benefits from aspects of the transactions that exceed the boundaries set by the SAAR.

For example, a thin capitalization rule does not prevent investors from funding subsidiaries by way of debt rather than equity, but it establishes a limit on the interest deductions that will be available in respect of the debt. A taxpayer can avoid the operation of the SAAR completely by remaining inside the safe harbour boundaries it establishes. Similarly, a rule that removes the tax benefit from low-interest or nil-interest loans to shareholders will apply where interest charged falls below the SAAR trigger threshold, but it has no impact on loans bearing higher interest rates. [66]

By setting boundaries for the use of particular tax rules, SAARs also provide signals on what is and is not considered abusive. For example, a controlled foreign corporation (CFC) rule does not unwind any investment in a tax haven, but it does attribute some of the income to the ultimate indirect owners under some conditions. There is no suggestion that the tax authorities would seek to invoke a GAAR to attribute income to the indirect owners where the income is earned by a subsidiary in a lower tax jurisdiction not covered by the CFC regime rules or the income is of a type explicitly not attributed under the CFC rules.

The different roles of GAARs and SAARs do not preclude simultaneous application of the two types of anti-avoidance rules in appropriate circumstances. An example is the use of loans from related companies to avoid the application of thin capitalization rules that only apply to loans directly made by parent companies. The tax authorities might first apply the GAAR to recharacterize the loans from related companies as loans from the parent company and then apply the thin capitalization SAAR to limit the interest deductions available to the borrower. [67]

59. The Liechtenstein law explicitly refers to the appropriate counterfactual as the one mandated by law.

60. See, for example, [Australia](#) and [New Zealand](#).

61. Note the warning of the Finance Minister in [India](#).

62. See, for example, [Hungary](#).

63. Some narrow SAARs in the United Kingdom may be described as TAARs, or targeted anti-avoidance rules; see the [United Kingdom](#).

64. See [Germany](#).

65. See the view offered in [Ireland](#).

66. See, for example, [Liechtenstein](#).

67. For examples, see [Russia](#) and [Spain](#).

## GAARs – A Key Element of Tax Systems in the Post-BEPS Tax World - Chapter 1: General Report: GAARs - Books (Last Reviewed:15 December 2015)

An interesting question in respect of the relationship between GAARs and SAARs is what happens if there is no SAAR and the taxpayer enters into a transaction that would be caught by SAARs in other jurisdictions. This would be the case, for example, if a taxpayer used very high levels of debt to provide capital to a foreign subsidiary when there is no thin capitalization rule or invested via subsidiaries in low-tax jurisdictions when there is no CFC rule in effect. It has been suggested that the inaction of a legislature in areas such as these implicitly signals acceptance of the arrangements that would have transgressed the boundaries established by a SAAR. [68] The proposition remains untested in the courts.

### 1.8. GAARs and tax treaties

Can a GAAR in a country's domestic law be used to deny the benefits of a tax treaty? The Commentaries on the OECD Model Convention suggest that domestic GAARs are compatible with the application of a treaty. [69] This is despite the fact that, through a variety of mechanisms including constitutional design, [70] almost all countries ensure that treaties will override domestic law.

In some cases, the compatibility of domestic law GAARs and treaties that override domestic law derives from the treaties themselves (or ancillary agreements). Thus, treaties may include a measure that states directly that the treaties will not prevent authorities from applying domestic anti-avoidance rules. [71] Alternatively, the parties may agree jointly in supplementary materials that domestic GAARs can be used to counter transactions that seek to abuse the treaty. [72]

In most cases, however, treaties are silent on the question of domestic GAAR rules. While a country's domestic law or a mechanism that establishes the priority of a tax treaty over domestic tax law can explicitly provide for the continued operation of a domestic GAAR despite any application of a treaty, [73] this is not the case in many jurisdictions. Nevertheless, even in the absence of a clear mandate to allow a domestic GAAR to deny a treaty benefit, courts will generally accept the application of a GAAR to an arrangement that is seen as abuse of a provision of the treaty. [74] How is this apparent contradiction resolved?

The answer appears to be the order in which domestic law and treaties are applied. There is no question that a treaty will prevail in any case where the treaty removes or qualifies a jurisdiction's ability to assess particular types of income or where the treaty stipulates a maximum tax rate to be imposed on some types of income that is lower than the rate which would apply under domestic law. But before the treaty can be invoked, domestic law will determine the income to which the treaty will apply. Unlike the assessment or rate provisions of domestic law that are explicitly addressed and overridden by a treaty, GAARs operate in the background of a domestic tax law, allowing tax authorities to recharacterize and establish net income at a stage prior to consideration of how the treaty will apply. Put simply, there is no scope for the treaty to apply to an arrangement that no longer exists once a transaction has been viewed differently under domestic law following the application of a GAAR reconstruction rule. [75] This interpretation of the operation of a GAAR is arguably consistent with the treaties and the Commentary on the OECD Model. [76] Importantly, it involves no treaty override.

It could, however, be more difficult to make this argument if the treaty provides definitions that *prima facie* cover the transaction established by a taxpayer. For example, if the taxpayer's tax return includes an amount that would be treated as a royalty under the treaty definition, it might be difficult for the tax authorities to assert that it can view the taxpayer's gain as interest or a dividend following a reconstruction of the arrangement under the GAAR. There is a view that in these circumstances the GAAR cannot be invoked to yield a result different from the result obtained following direct application of the treaty using the treaty definitions. [77]

The effect of applying a GAAR in a transaction involving treaties could involve assessment of a non-resident, raising questions of how tax can be collected. For example, if investors in a third country invest by way of a nominee or holding company established in a treaty partner state to shield themselves from tax on the sale of assets in the source state, the GAAR could be used to reconstruct the arrangement as a direct sale by the ultimate owners, outside the protection of the treaty. However, unless there is a way of collecting tax by imposing a withholding obligation on a local taxpayer, [78] the local authorities may end up assessing an entity in a tax haven, making collection of the tax problematic. ## 1.9. GAARs and EU law

In the past decade and a half, the ECJ has walked a very challenging tightrope seeking to reconcile two potentially conflicting principles: on the one side, the power of Member States to legislate in the direct tax field, an area of Member State competence, and, on the other side, the prohibition on Member States adopting policies that prejudice nationals of other Member States contrary to the fundamental freedoms enshrined in EU law. It has balanced the two by allowing national laws, which would include GAARs, to apply in cases where a taxpayer has adopted an abusive practice, generally defined in terms of its artificiality combined with its tax avoidance purpose. [80] The question of when arrangements can be attacked by a GAAR without infringing fundamental freedoms is fraught with uncertainty, and commentators have questioned whether tax authorities in their jurisdictions would succeed in all cases in which they might seek to use a GAAR to stop what they perceive as intra-European tax avoidance. [81] Also uncertain is whether the proportionality principle would permit the use of a GAAR to prevent tax avoidance in a situation that falls short of a wholly artificial arrangement. [82]

On the surface, there appears to be more certainty regarding the supremacy of EU law over anti-avoidance provisions in the indirect (VAT) tax laws, perhaps in part because there is a de facto European VAT law in the form of the VAT Directive, a measure that has no direct tax counterpart. On closer examination, however, it could be argued that the domestic “anti-avoidance” rules found to be inconsistent with, and consequently overridden by, EU law are in fact not anti-avoidance rules but poorly targeted and burdensome measures used by local authorities as a substitute for sound auditing to expose fraud (rather than avoidance in the strict sense of the word). [83]

## 1.10. Alternatives to a GAAR

GAARs are adopted in environments in which courts have interpreted tax laws in a way that allows taxpayers to achieve tax outcomes inconsistent with those intended for the economic outcomes resulting from particular transactions. Such interpretations may be possible because of vague borderlines in the law where receipts or expenditures on either side of the border are subject to very different tax rules. [84] These interpretations may also be possible because economically similar transactions can attract different tax consequences if they adopt different legal forms. In some cases, the result is attributable to tax law being structured in a way that allows taxpayers to dissect overall transactions into separate parts and exploit the manner in which the separate rules for each step operate together.

Almost every example of a situation that has prompted the adoption of a GAAR or that was made subject to reassessment on the basis of a GAAR has pointed to an issue with the underlying law. Not surprisingly, a number of national commentators have suggested that the simplest alternative to a GAAR is better drafted tax law. [85]

Whether this is possible remains an open question. The unlimited flexibility of commercial law in market economies provides countless legal alternatives that yield the same economic substance. Taxpayers and legislative drafters think in terms of legal and economic arrangements with which they are familiar and tax laws are drafted accordingly. Only after the fact might they discover that an alternative substance or form of transaction can achieve similar commercial outcomes. Some argue that it is impossible for legislators to draft laws so ideal that their applicability to every variation of every type of transaction can be identified.

There are also external constraints faced by the drafters of tax laws. Tax laws do not operate in isolation from other national laws. They must incorporate legal concepts – companies, partnerships, spouses, employees, and so on – based in other areas of law and these concepts often impose restrictions on tax law drafters that are difficult to overcome. Tax laws also apply to transactions that cross borders, and the ability of national drafters to modify domestic laws may be limited as a result of external factors such as the regulations or directives of an economic community to which a country belongs or treaties to which it is a party.

Tax law drafters also face inevitable political constraints. In virtually all jurisdictions, second-guessing social needs and the economy, politicians use tax laws to subsidize a range of social and economic activities. The resulting tax expenditures establish sometimes vague borderlines and invite restructuring and reorganization by taxpayers seeking to portray their activities or situations as meeting the criteria for preferential tax treatment. The political imperatives that prompt social or economic intervention and the granting of concessions in the first place may also inhibit the legislature from setting out unambiguous borderlines between alternative tax rules. The legislature may find it easier to leave line-drawing to tax authorities armed with a GAAR to attack what they perceive to be particularly egregious attempts to recharacterize transactions to take advantage of tax preferences.

## GAARs – A Key Element of Tax Systems in the Post-BEPS Tax World - Chapter 1: General Report: GAARs - Books (Last Reviewed:15 December 2015)

There are, nevertheless, clear statutory alternatives to a GAAR in many cases in which they are used. The insertion of a tax haven company between a lender and borrower to convert taxable interest to non-taxable inter-corporate dividends calls into question the wisdom of an exemption for dividends from subsidiaries located in tax havens. [86] Similarly, the use of interposed entities to avoid gains on the sale of shares or immovable property can be addressed easily by the standard provision that treats interests in interposed entities as interests in underlying property where gains on the direct sale of underlying property would be subject to tax. [87] Another case where a GAAR appears to be a blunt instrument is where it is used to attack the insertion of one-person companies or other entities between customers and individuals providing personal-services labour, [88] such as an actress providing acting services or an author writing a book. [89] Rather than attack the transaction as tax motivated and assess the individual using the GAAR, many jurisdictions rely on far more certain and consistently applied (that is, fairer) personal-service income attribution rules.

Support for the view that addressing shortcomings in the substantive tax legislation is a preferable alternative to a GAAR, with its inherent uncertainty and selective application, might be found in the uniqueness of schemes attacked with GAARs in some jurisdictions. The fact that the schemes are not widespread suggests other jurisdictions have adequate alternative statutory rules in place. For example, a GAAR has been used to attack a transfer of copyright for inadequate consideration by an author with the aim of splitting income with related persons. [90] This is an arrangement that in many other jurisdictions would trigger a capital gain (the cost base of the assigned property being zero and the consideration for transfer to related persons being the present value of the future income stream) that would render the avoidance scheme ineffective. Similarly, a transfer of a partnership business to a lower taxed company and a distribution of profits in excess of the salaries drawn by the partners in the form of interest-free loans could easily be addressed through a better definition of dividends to include non-market rate loans. [91] A thin capitalization rule that fails to take into account indirect loans made by a parent through related parties [92] could be modified so that it covers direct and indirect loans from the parent. A capital gains regime that allows taxpayers to transfer assets to related parties at book value so that the related entity can on-sell at market value, shifting the profits to the related entity, [93] can be set right by ensuring that non-arm's length sales take place at market value. An income tax that lacks dividend washing rules and that allows foreign equity owners to sell cum-dividend shares to local investors to avoid withholding tax on the dividends and then reacquire the shares ex-dividend with a small premium paid to the local party for its tax avoidance services [94] can simply incorporate conventional dividend washing measures.

The same access to alternatives is true in the case of judicial doctrines that act, in the view of some, as quasi-GAARs. A court could say it is an abuse of law if a taxpayer makes a deductible "gift" to a school but is relieved of paying tuition for the taxpayer's children. The simpler alternative is to simply note that, in the context of the purpose of the concession (tax savings for gifts to eligible institutions), the amount paid was not a "gift": a donation or gift, by definition, involves no quid pro quo.

Whether judicial doctrines, particularly substance over form approaches, form an adequate alternative to a GAAR will depend on how courts exercise their interpretative powers. It seems that, in many instances, there is scope for interpretation that would render a GAAR superfluous (although some dissent from this view [95] and others wonder whether such an approach might lead to equal uncertainty [96]). On the other hand, there are instances where substance over form interpretations have proven inadequate to the task, prompting the legislature to intervene with a statutory rule. [97]

### 1.11. Looking forward

It is only on the rarest of occasions that jurisdictions have repealed or watered down a GAAR after it has been enacted. Much more common is the amendment of GAARs to strengthen their operation. And while GAARs are not universal, they are becoming the norm in most income tax systems, with a wave of adoptions in recent times.

It appears that there are viable alternatives to GAARs including better drafted tax law in general, better drafted SAARs, better designed tax expenditures, and shifts to principle-based drafting that remove many of the weaknesses currently exploited by taxpayers seeking to minimize tax. For a variety of reasons, however, there are precious few examples of jurisdictions moving to principle-based drafting or other drafting techniques to overcome the features in their tax laws that have given rise to avoidance

opportunities. In the absence of alternative designs for tax laws, advocates of GAARs argue that they are needed as a stopgap to address the inherent limitations to legislative drafting. It seems legislatures agree.

In contrast to the prevailing trend, there remain instances where judicial doctrines have limited scope and no statutory GAAR is in place. It remains an open question how long this state of affairs can continue, particularly for European nations in the context of EU support for strengthened anti-avoidance rules. <sup>[98]</sup>

Candice M. Turner<sup>2</sup>

### Summary and conclusions

Unlike many other countries, the United States does not have a statutory general anti-avoidance rule (“GAAR”). Rather, the general anti-avoidance rules in the United States were created by judicial doctrine and developed over time. Those judicial doctrines include the business purpose doctrine, the substance-over-form doctrine, the sham transaction doctrine, the step transaction doctrine, and the economic substance doctrine. Although each of these doctrines can be independently analyzed, the lines between their applications are not particularly clear. Each of the doctrines overlap and are conceptually related. Indeed, the economic substance doctrine is thought by some to have subsumed each of the other doctrines.

In 2005, the US Congress was becoming increasingly concerned that taxpayers were using the technical language of the tax law to structure transactions for tax benefits that were not squarely within the purpose of Congress in creating those laws. Additionally, the judicially created anti-abuse rules were not interpreted the same way by the various US Courts. The Joint Committee drafted a report to Congress proposing to address these issues by codifying the economic substance doctrine. In 2010, Congress finally followed this proposal by passing § 7701(o) of the Internal Revenue Code. This provision was not intended to change the existing law. The provision essentially provides that, with respect to any transaction to which the economic substance doctrine is relevant, a transaction will have economic substance only if the transaction changes the taxpayer's economic position in a meaningful way and the taxpayer has a substantial purpose, apart from federal income tax effects, for entering into the transaction.

In parsing the application of § 7701(o), the first criteria that must be considered is whether the economic substance doctrine is “relevant”. Much has been written regarding relevancy of the economic substance doctrine. Generally, the economic substance doctrine is not relevant when a taxpayer is seeking to take advantage of a tax benefit arguably intended by Congress. This requirement acknowledges that Congress has enacted many tax laws that allow taxpayers to structure transactions in particular form solely for tax benefits. If the benefits the taxpayer is seeking to take advantage of are not specifically intended by the law, the economic substance doctrine might be relevant.

Once the relevancy hurdle is crossed, a transaction will only have economic substance if two conditions are met. First, the transaction must change in a meaningful way the taxpayer's economic position. What constitutes meaningful for this purpose is not clear or defined. Second, the taxpayer must have a non-tax, business purpose for the transaction.

UNITED STATES

---

Importantly, § 7701(o) makes clear that both criteria must be satisfied for economic substance to apply.

While § 7701(o) is the closest thing the United States has to a GAAR, another important anti-avoidance measure in US tax law is the limitation on benefits provision (the “LOB”) contained in most US income tax treaties. The LOB is intended to prevent a taxpayer from treaty shopping by creating residence in treaty jurisdiction to take advantage of the treaty provisions. The LOB provides that only qualifying persons are entitled to the benefits of the treaty. Even if the LOB provision is met, treaty benefits can be denied under domestic law if the transaction for which treaty benefits are claimed is a conduit financing transaction.

## Part One: General Anti-Avoidance Rules or Doctrines

### 1.1. General overview

The oft-quoted Judge Learned Hand has stated the fundamental principle of tax avoidance law in the United States, “[A]nyone may arrange his affairs so that his taxes shall be as low as possible; he is not bound to choose that pattern which best pays the treasury. There is not even a patriotic duty to increase one’s taxes. Over and over again the Courts have said that there is nothing sinister in so arranging affairs as to keep taxes as low as possible. Everyone does it, rich and poor alike and all do right, for nobody owes any public duty to pay more than the law demands.”<sup>3</sup> This language and the case in which it arose have been interpreted as drawing a distinction between tax avoidance, which is permissible, and tax evasion, which is not.

The chief problem with this legal distinction is that what constitutes tax avoidance as opposed to tax evasion is not clear. Chief Justice Oliver Wendell Holmes found the difference to be outcome determinative, i.e., that tax evasion is merely an unsuccessful attempt to avoid taxation, “[w]e do not speak of evasion because, when the law draws a line, a case is on one side of it or the other and, if on the safe side, it is none the worse legally that a party has availed himself to the full of what the law permits. When an act is condemned as an evasion, what is meant is that it is on the wrong side of the line indicated by the policy if not by the mere letter of the law.”<sup>4</sup> Taxpayers were, thus, left with the understanding that they were permitted to avoid tax, indeed had no patriotic, moral or other duty not to do so, as long as they did not cross a line that was very unclearly defined. A rich body of case law developed from the *Helvering* case and attempted to provide some clarity with regard to this line. This case law established the doctrine that a taxpayer could not arrange his or her affairs to avoid taxes if that transaction lacked economic substance.<sup>5</sup> In addition to the economic substance doctrine, several different but greatly overlapping anti-avoidance doctrines were created by the courts to distinguish between permissible and impermissible avoidance. The judicial creation of these doctrines is discussed in more detail in Part II below.

In 2004, the US Congress became concerned about taxpayers that were venturing

<sup>3</sup> *Helvering v. Gregory*, 69 F.2d 809, 810 (2d Cir. 1934), *aff’d*, 293 US 465 (1935).

<sup>4</sup> *Bullen v. Wisconsin*, 240 US 625, 630–631 (1916), *see also*, *Superior Oil Co. v. Mississippi*, 280 US 390, 395–396 (1930).

<sup>5</sup> *See, e.g., Coltec Indus., Inc. v. US*, 454 F.3d 1340 (Fed. Cir. 2006), *cert. denied*, 549 US 1206 (2007) (corporate tax shelter disregarded under “economic substance doctrine,” even though statute mechanically applied); *see also, Hines v. United States*, 912 F.2d 736, 741 (4th Cir. 1990).

extremely close to the impermissible avoidance line in transactions that relied on highly technical tax provisions to produce consequences not intended in the enactment of those provisions. Senator Max Baucus, the ranking member of the US Senate Committee on Finance, and Senator Charles Grassley, another member of the committee, asked the staff of the Joint Committee on Taxation to issue periodic reports to Congress containing proposals, inter alia, to curtail tax shelters.<sup>6</sup> In its 2005 report responding to this request, the Joint Committee recommended codification of the economic substance doctrine, stating “[a] strictly rule-based tax system cannot efficiently prescribe the appropriate outcome of every conceivable transaction that might be devised and is, as a result, incapable of preventing all unintended consequences.”<sup>7</sup> The Joint Committee discussed the economic substance doctrine developed by the courts, but stated that the “[a]pplication of this doctrine to certain categories of transactions having the characteristics of tax shelters should be clarified and strengthened in order to improve its effectiveness at deterring unintended consequences and to promote greater uniformity.”<sup>8</sup> Eventually, in 2010, Congress did codify the economic substance doctrine as discussed below.

Unlike many of other countries which share the US heritage of English law, the United States does not have a statutory general anti-avoidance rule (GAAR).<sup>9</sup> Therefore, the codification of the economic substance doctrine is the closest analogous provision to a GAAR under US law. As discussed in more detail below, however, US law also contains other specific anti-abuse statutes and anti-“treaty shopping” measures in most of its tax treaties.

## 1.2. The tax avoidance scheme, arrangement or transaction

The Health Care and Education Reconciliation Act of 2010 (H.R. 4872), signed into law by President Barack Obama on March 30, 2010, added § 7701(o) to the Internal Revenue Code of 1986, as amended (the “Code”). Section 7701(o) codified the economic substance doctrine previously developed by the courts:

1. Clarification of economic substance doctrine.
2. Application of doctrine.  
In the case of any transaction to which the economic substance doctrine is relevant, such a transaction shall be treated as having economic substance only if-
  - A. the transaction changes in a meaningful way (apart from Federal income tax effects) the taxpayer’s economic position, and
  - B. the taxpayer has a substantial purpose (apart from Federal income tax effects) for entering into such a transaction.
3. Special rule whereby taxpayer relies on profit potential.
  - A. In general. The potential for profit from a transaction shall be taken into account in determining whether the requirements of subparagraphs (A) and (B) of paragraph (1) are met with respect to the transaction only if the present value of the reasonably expected pre-tax profit from the transaction is substantial in relation to the present value of the expected net tax benefits that would be allowed if the transaction were respected.

<sup>6</sup> Letter dated 26 February 2004.

<sup>8</sup> *Id.*

<sup>9</sup> Canada, Australia, and the United Kingdom, for example, each have a GAAR.

UNITED STATES

---

- B. Treatment of fees and foreign taxes. Fees and other transaction expenses shall be taken into account as expenses in determining pre-tax profit under subparagraph (A). The Secretary shall issue regulations requiring foreign taxes to be treated as expenses in determining pre-tax profit in appropriate cases.
4. State and local tax benefits.
  5. For purposes of paragraph (1), any State or local income tax effect which is related to a Federal income tax effect shall be treated in the same manner as a Federal income tax effect.
  6. Financial accounting benefits.
  7. For purposes of paragraph (1)(B), achieving a financial accounting benefit shall not be taken into account as a purpose for entering into a transaction if the origin of such financial accounting benefit is a reduction of Federal income tax.
  8. Definitions and special rules.
  9. For purposes of this subsection-
    - A. Economic substance doctrine. The term “economic substance doctrine” means the common law doctrine under which tax benefits under subtitle A, with respect to a transaction, are not allowable if the transaction does not have economic substance or lacks a business purpose.
    - B. Exception for personal transactions of individuals. In the case of an individual, paragraph (1) shall apply only to transactions entered into in connection with a trade or business or an activity engaged in for the production of income.
    - C. Determination of application of doctrine not affected. The determination of whether the economic substance doctrine is relevant to a transaction shall be made in the same manner as if this subsection had never been enacted.
    - D. Transaction. The term “transaction” includes a series of transactions.

Notably, the provision applies only to transactions entered into after its passage and, with respect to individuals, only to transactions entered into in connection with a trade or business or an activity engaged in for the production of income.

In considering whether § 7701(o) should apply to a particular transaction, the first element to consider is whether the economic substance doctrine is “relevant.” The Joint Committee attempted to clarify when the economic substance doctrine is relevant:

*The determination of whether the economic substance doctrine is relevant to a transaction is made in the same manner as if the provision had never been enacted. Thus, the provision does not change present law standards in determining when to utilize an economic substance analysis.*

*The provision is not intended to alter the tax treatment of certain basic business transactions that, under longstanding judicial and administrative practice, are respected merely because the choice between meaningful economic alternatives is largely or entirely based on comparative tax advantages. Among these basic transactions are (1) the choice between capitalizing a business enterprise with debt or equity; (2) a US person's choice between utilizing a foreign corporation or a domestic corporation to make a foreign investment; (3) the choice to enter a transaction or series of transactions that constitute a corporate organization or reorganization under subchapter C; and (4) the choice to utilize a related-party entity in a transaction, provided that the arm's length standard of section 482 and other applicable concepts are satisfied. Leasing transactions, like all other types of transactions, will continue to be analyzed in light of all the facts and circumstances. As under present law, whether a particular transaction meets the requirements for specific treatment under any of these provisions is a question of facts and circumstances. Also, the fact that a transaction meets the requirements for specific treatment under any provision of the Code is not determinative of whether a transaction or a*

*series of transactions of which it is a part has economic substance.*<sup>10</sup>

Put more succinctly, the Joint Committee stated, “If the realization of the tax benefits of a transaction is consistent with the Congressional purpose or plan that the tax benefits were designed by Congress to effectuate, it is not intended that such tax benefits be disallowed.”<sup>11</sup> Prior to the enactment of the § 7701(o), many commentators, in contemplation of its passage, considered when the economic substance doctrine should be used. As a general theme, the commentators acknowledged that Congress specifically provided for certain transactions that would yield favorable tax consequences without any economic motive; for example, a like-kind exchange under § 1031 of the Code. As the New York Bar Association Tax Section explained, what implicates the economic substance doctrine is a taxpayer seeking to obtain benefits that were not envisioned by Congress; if a taxpayer enters into a transaction that has no non-tax business purpose and does not meaningfully change the taxpayer’s economic position, the taxpayer’s form of transaction will still be respected if Congress might reasonably have envisioned a taxpayer applying the rules in such a way.<sup>12</sup>

### 1.3. The tax benefit, gain or advantage

Once determined that the economic substance doctrine is relevant, the second element of the economic substance doctrine can be found in § 7701(o)(1)(A) (commonly referred to as the “objective prong” or “economic substance” prong). Specifically, in order to successfully assert that a transaction has economic substance, a taxpayer must show that the transaction changed the taxpayer’s economic position in a “meaningful” way (apart from federal income tax effects).<sup>13</sup> For these purposes, any state or local income tax effect which is related to a federal income tax effect is treated in the same manner as a federal income tax effect.<sup>14</sup> In short, a taxpayer must show that the transaction actually resulted in a meaningful non-tax change to their economic circumstances.

No statutory definition is given regarding what causes a change to be “meaningful” enough for these purposes. Moreover, while the IRS has clarified that it will apply pre-codification case law in making this determination,<sup>15</sup> it has further clarified that it will not issue private letter rulings or determination letters regarding whether a transaction complies with this prong.<sup>16</sup>

The above notwithstanding, the most prominent method a taxpayer can use to meet this prong is to argue the existence of a profit potential related to the transaction prior to its commencement. This may only be raised if the present value of the reasonably expected pre-tax profit from the transaction can be shown to be substantial in relation to the present

<sup>10</sup> Staff of J. Comm. on Taxation, 111th Cong., JCX-27-10, Technical Explanation of the Revenue Provisions of the “Reconciliation Act of 2010,” as amended, in Combination with the “Patient Protection and Affordable Care Act”, 152-53 (Comm. Print 2010).

UNITED STATES

---

value of the expected net tax benefits that would be allowed if the transaction were respected.<sup>17</sup> While fees and other transaction expenses are explicitly included when making this determination, regulations governing the treatment of foreign taxes for these purposes have not yet been promulgated (although courts are still free to consider the issue in the interim).<sup>18</sup>

To this point, neither Congress nor the IRS have clarified when reasonably expected pre-tax profits rise to the level of “substantial” mentioned above. While the phrase has been analyzed differently depending on the situation, it should be noted that economic substance cases are highly context-dependent and will turn on the facts and circumstances of a given situation.

In the absence of a profit potential, a taxpayer may also meet this prong by asserting a less quantifiable economic change such as the formation of a non-US corporation for the purpose of holding oil and gas leases.<sup>19</sup>

#### 1.4. The taxpayer's purpose or intent

The third element of the economic substance doctrine can be found in § 7701(o)(1)(B) (commonly referred to as the “subjective prong” or the “business purpose” prong). In addition to showing that a transaction possessed economic substance, a taxpayer must also show that he or she had a substantial business purpose in entering into the transaction (apart from federal income tax effects).<sup>20</sup> Similar to the objective prong, any state or local income tax effect which is related to a federal income tax effect is treated in the same manner as a federal income tax effect.<sup>21</sup> Likewise, the IRS has stated (i) that it will apply pre-codification case law in analyzing this prong,<sup>22</sup> and (ii) that it will not issue private letter rulings or determination letters regarding whether a transaction complies with this prong as well.<sup>23</sup>

As with the objective prong, little guidance is available regarding how to analyze this requirement post-codification. No clear definition has been given regarding what qualifies a business purpose as “substantial,” although the Code clearly states that achieving a financial accounting benefit in relation to a reduction of federal income tax is not sufficient for these purposes.<sup>24</sup> Here as well, the presence or absence of a profit motive is a prominent lens through which the prong is analyzed. In *Peat Oil & Gas Assocs. v. Commissioner*, the Tax Court stated that the test relating to a taxpayer's profit objective should be whether the taxpayer possessed an “actual and honest” profit objective in relation to the transaction at issue.<sup>25</sup> This rule, while not binding on the federal appellate courts, has been cited at least once by each US Circuit Court of Appeals.<sup>26</sup>

The above notwithstanding, pre-codification case law is replete with examples of courts

<sup>17</sup> Code § 7701(o)(2)(A).

<sup>18</sup> Code § 7701(o)(2)(B).

<sup>25</sup> 100 T.C. at 281-83.

<sup>26</sup> *Id.*

using a variety of factors to determine the presence of a subjective business purpose in the absence of a profit motive. For example: in *Andantech, LLC v. Commissioner*, the Tax Court analyzed (i) the presence of arm's-length price negotiations; (ii) the relationship between an asset's sales price and fair market value; (iii) the structure of the financing; (iv) how closely the parties adhere to applicable contract terms; (v) the reasonableness of the income and residual value projections (in the context of lease transactions); and (vi) the use of other entities.<sup>27</sup> Likewise, in *Cottage Sav. Ass'n v. Commissioner*, a taxpayer's exchange of mortgages to avoid the risk of closure by a federal regulatory agency was deemed valid by the Supreme Court for these purposes.<sup>28</sup>

### 1.5. The consequences of the GAAR application to a given case

Currently, no reported cases include any analysis or application of § 7701(o). Section 7701(o) is not applicable to any transactions occurring prior to March 30, 2010. Accordingly, the majority of federal tax cases being heard and reported by the district and circuit courts to which a tax avoidance argument might apply involve transactions occurring prior to the applicability of the relatively new rule. Several cases have mentioned § 7701(o), but noted that it would not apply to the transaction at issue in the case because the transaction occurred before March 30, 2010.<sup>29</sup> Some of those cases also stated that the result would have been the same if § 7701(o) did apply.<sup>30</sup>

### 1.6. Conflicts between domestic and treaty GAAR or between domestic GAAR and SAAR

US tax treaties are incorporated into domestic tax law under § 884 of the Code. Section 884(a)(1) provides that the provisions of the Code are to be applied to any taxpayer “*with due regard to any treaty obligation of the United States which applies to such taxpayer.*” Although rules to combat treaty shopping exist in US domestic law, the US has advocated for treaty-based GAAR and SAAR, most notably in the Limitation on Benefits (LOB) article. This article serves to deny treaty benefits to a resident of a treaty country if it does not satisfy one of several alternative tests to be considered a “qualified person.” The LOB article in US tax treaties has generally required that a company seeking to obtain treaty benefits should satisfy one of (i) a “publicly traded company” test, (ii) an “ownership/base erosion” test, or (iii) an “active trade or business” test.

In 2016, the Department of the Treasury released a new Model Income Tax Convention, which serves as the model for US tax treaty negotiation.<sup>31</sup> Among other measures added for

<sup>27</sup> T.C. Memo 2002-97 at 131.

<sup>28</sup> 400 US 554 (1991).

<sup>29</sup> See e.g., *The Bank of NY Mellon Corp. v. Comm’r*, 801 F.3d 104 (2d Cir 2015) (stating that because § 7701(o) is not retroactive, it does not apply to the case); *Salem Financial Inc. v. US*, 786 F.3d 932 (Fed Cir 2015), *Nevada Partners Fund v. US*, 720 F.3d 594 (5<sup>th</sup> Cir 2013).

<sup>30</sup> *Santander Holdings USA, Inc. v. US*, 844 F.3d 15 (1st Cir 2016) (stating that the holding is not in conflict with § 7701(o)).

<sup>31</sup> US Department of the Treasury, “Treasury Announces Release of 2016 Model Income Tax Treaty” (17 February 2016). Available at: <https://www.treasury.gov/press-center/press-releases/Pages/jl0356.aspx>.

## UNITED STATES

the first time in the US Model treaty, the “derivative benefits” test and the “headquarters company” test (which tests had been included in newer tax treaties negotiated with certain treaty partners) were included as additional methods to satisfy the LOB article and have the right to treaty benefits.<sup>32</sup>

Similar LOB provisions were included in the OECD's Multilateral Instrument (MLI), as tests that contracting jurisdictions could choose to apply in addition to the “principal purposes test” of the MLI's “Prevention of Treaty Abuse” article – a concession in the development of the MLI to encourage signature by the United States.<sup>33</sup> However, the US has not signed the MLI to date.

is also not expected to increase its adherence to the OECD's BEPS project in the near future in any marked fashion. Thus, the LOB articles and other specific anti-abuse of existing US tax treaties should be viewed as the extent of the US's treaty-specific GAAR and SAAR for the time being.

Finally, it may be noted that the 2016 US Model Income Tax Convention also adopts additional anti-abuse provisions in line with the OECD's BEPS recommendations, including a revised preamble clarifying that the intention of the Convention is to prevent double taxation without creating opportunities for double non-taxation, a rule against contract-splitting for purposes of the permanent establishment threshold for construction or installation sites, and a 12-month ownership requirement for the five-percent withholding rate for direct dividends.<sup>34</sup> The included provisions could be viewed as GAAR or SAAR in their own right but the LOB is the pinnacle of treaty-based GAAR in US international tax law.

Even if a resident of a treaty country satisfies the LOB article of the treaty, a domestic anti-abuse rule may apply to disallow treaty benefits. Specifically, Treasury Regulation § 1.881-3 provides rules to combat treaty shopping involving “*the participation of one or more intermediate entities in a financing arrangement whereby such entities are acting as conduit entities.*”<sup>35</sup> Where these so-called “anti-conduit rules” apply, the Internal Revenue Service may disregard such participation by one or more intermediate entities for the purposes of Code § 881 (i.e., taxation of foreign persons on a gross basis as enforced by withholding).

The anti-conduit rules define “financing arrangement” as a series of transactions pursuant to which one person (the financing entity) advances money or other property, or grants rights to use property, and another person (the financed entity) receives money or other property, or rights to use property, if the advance and receipt are effected through one or more other persons (intermediate entities) and, with certain exceptions, there are

<sup>32</sup> US Department of the Treasury, “US Model Income Tax Convention” (17 February 2016) Available at <https://www.treasury.gov/resource-center/tax-policy/treaties/Documents/Treaty-US%20Model-2016.pdf>

<sup>33</sup> OECD, “Multilateral Convention to Implement Tax Treaty Related Measures to Prevent Base Erosion and Profit Shifting” (24 November 2016) at art 7.

<sup>34</sup> US Department of the Treasury, “Preamble to 2016 US Model Income Tax Convention” (17 February 2016) Available at: <https://www.treasury.gov/resource-center/tax-policy/treaties/Documents/Preamble-US%20Model-2016.pdf> at pp 8-9.

<sup>35</sup> This regulation is issued under authority of Code § 7701(l), enacted as part of the Omnibus Budget Reconciliation Act of 1993, which provides the Treasury Department broad authority to prescribe regulations to “recharacterize any multiple-party financing transaction as a transaction directly between any two or more parties” where appropriate to prevent avoidance of tax.

There are other specific rules in the treaty context which deal with potential abuse other than treaty shopping, such as the regulations under Code § 894(c). These regulations, which have been incorporated in the text of many recent US tax treaties, deal with whether income is “derived” by a foreign person claiming treaty benefits when a hybrid (or reverse hybrid) entity is involved, and are not explored in this paper.

“financing transactions” linking the financing entity, each of the intermediate entities in the chain, and the financed entity.<sup>36</sup> Accordingly, the anti-conduit rules generally apply to multi-party transactions consisting of debt, lease, license, certain debt-like equity and any other transaction “pursuant to which a person makes an advance of money or other property or grants rights to use property to a transferee who is obligated to repay or return a substantial portion of the money or other property advanced, or the equivalent in value,” and do not apply where any part of the chain is an ordinary equity arrangement.<sup>37</sup>

A further limitation in the anti-conduit rules provides that an intermediate entity may be disregarded only if it is a “conduit entity.” An intermediate entity is a conduit entity with respect to a financing arrangement if: (1) its participation reduces US withholding tax under § 881; (2) its participation is pursuant to a tax avoidance plan; and (3) either the intermediate entity is related to the financing entity or the financed entity, or the intermediate entity would not have participated in the financing arrangement on substantially the same terms but for the fact that the financing entity engaged in the financing transaction with the intermediate entity.<sup>38</sup> Importantly, in circumstances where there is not a financing transaction between related persons, but a principal purpose for the structure is to prevent the characterization of such an arrangement as a financing arrangement, the related persons may be treated as a single intermediate entity.<sup>39</sup> The rules make it clear that, when the participation of an intermediate entity is disregarded, it is disregarded for all the purposes of § 881, including for the purposes of applying any relevant income tax treaties.<sup>40</sup>

There is no theoretical limitation preventing the application of other anti-avoidance rules, such as the substance-over-form, step transaction and economic substance doctrines, in the treaty context. For example, in *Del Commercial Properties, Inc. v. Commissioner*, 251 F.3d 210 (D.C. Cir. 2001), the Court of Appeals for the D.C. Circuit affirmed the Tax Court’s application of the step transaction doctrine to disallow zero interest withholding under the US-Netherlands tax treaty to interest paid to a Dutch financing affiliate, where the financing was part of a multi-step arrangement involving a third-party Canadian bank and affiliates in Canada and other jurisdictions. Withholding tax on interest under the US-Canada treaty would have been 15 percent.

The transaction in *Del Commercial Properties* predated the promulgation of the anti-conduit rules under Treasury Regulation § 1.881-3. It may be noted that in Field Service Advice 200227006, the IRS considered the application of general substance-over-form principles, such as applied in *Del Commercial Properties*, separately from the anti-conduit rules.<sup>41</sup> In that Field Service Advice, the IRS determined that the anti-conduit rules did not apply, and also that the facts were insufficient to warrant the application of the general substance-over-form doctrine.

Nevertheless, following the extensive inclusion of an LOB article in most US tax treaties, as well as the promulgation of the specific anti-conduit rules in Treasury Regulation § 1.881-3,

<sup>36</sup> Treas. Reg. § 1.881-3(a)(2)(i)(A).

<sup>37</sup> Treas. Reg. § 1.881-3(a)(2)(ii)(A).

<sup>38</sup> Treas. Reg. § 1.881-3(a)(4).

<sup>39</sup> Treas. Reg. § 1.881-3(a)(2)(i)(B).

<sup>40</sup> Treas. Reg. § 1.881-3(a)(3)(ii)(C). Another provision of § 881 to which the anti-conduit rules may apply is the portfolio interest exemption, which exempts interest income from withholding tax if certain requirements are satisfied, such as that the creditor not be a “10% shareholder” of the debtor.

<sup>41</sup> Field Service Advice memoranda do not constitute authority having precedential value, but may indicate the views and legal analysis of the IRS.

UNITED STATES

situations warranting the application of the GAARs to combat treaty shopping are likely limited.

## Part Two: Case law on statutory or court-developed GAARs

### 2.1. Judicially created anti-abuse rules

As noted above, the vast majority of the US anti-avoidance law is judicially created. The anti-avoidance doctrines utilized in the administration of the Code arose as creations of judicial common law. In 1935, in the landmark case *Gregory v. Helvering*,<sup>42</sup> the Supreme Court introduced the idea that US courts reassign the tax consequences of a transaction or series of transactions if, essentially, the form of the transaction or transactions did not match the substance and, as a result, the taxpayer received tax benefits that the taxpayer would otherwise not be entitled to receive. This idea was gradually expanded across the US federal court system to the point where a number of easily identifiable doctrines currently exist, including (i) the business purpose doctrine, (ii) substance over form, (iii) the sham transaction doctrine, (iv) the step transaction doctrine and (v) the economic substance doctrine (as discussed above). While each can be analyzed as discrete from the others, attempting to isolate and draw distinct boundaries between them is ill-advised; they are closely related and conceptually overlap in many places. Arguably, the economic substance doctrine has at least partially subsumed the others, although each doctrine merits separate discussion.

#### *a. Business Purpose Doctrine*

Arguably, it was the business purpose doctrine that was applied by the Supreme Court in *Gregory v. Helvering*,<sup>43</sup> with a search for “economic substance” merely being part of its broader analysis.<sup>44</sup> The business purpose doctrine generally encapsulates the idea that transactions structured solely to avoid taxes should not be recognized without some independent business purpose for the transaction (hence the name). Courts generally applied this doctrine by analyzing the subjective intent of the taxpayer, that is, whether the taxpayer had an independent, non-tax purpose for entering into the transaction.<sup>45</sup>

Several issues quickly arose from attempts to apply a doctrine which punished a taxpayer for his or her subjective intent to avoid tax. First, the courts needed to determine if the business purpose doctrine applied if the taxpayer had a legitimate business purpose in entering into a transaction and could have completed the transaction in a way which did not avoid tax, but instead completed the transaction in a way which resulted in less tax. For example, as indicated in *United Parcel Serv. of Am., Inc. v. Commissioner*, a taxpayer's choice between financing a transaction with debt or equity may be chosen solely due to the resulting tax implications, but this does not necessarily invalidate the taxpayer's choice, as

<sup>42</sup> *Gregory v. Helvering*, *supra*.

<sup>43</sup> *Id.*

<sup>44</sup> *Zmuda v. Commissioner*, 731 F.2d 1417 (9th Cir. 1984).

<sup>45</sup> *Kirchman v. Commissioner*, 862 F.2d 1486 (11th Cir. 1989).

this would otherwise eliminate tax-planning.<sup>46</sup> Second, courts were also required to determine if the business purpose doctrine required nullifying the tax benefits of a transaction in cases in which significant tax implications arose from a transaction with minor non-tax business purposes, i.e., determining at what point the tax results so dwarf the business purpose that the business purpose should be disregarded.<sup>47</sup> This issue of whether the business purposes need to be the sole motivation for the transaction or whether it could be one of several purposes calls to mind the principle purpose test as part of the ongoing BEPS implementation. Eventually, the business purpose doctrine was incorporated into the larger economic substance doctrine as its “subjective prong”.<sup>48</sup>

### *b. Sham Transaction Doctrine*

In addition to situations in which the IRS may challenge a taxpayer's chosen form of a transaction by arguing that it differs from the actual underlying substance, the IRS may invoke the sham transaction doctrine in situations where the taxpayer has presented false or incomplete facts and, as a result, the transaction, or part of the transaction, is merely a sham. The Supreme Court, in the landmark *Frank Lyon* case, defined a sham transaction as “an elaborate financing scheme designed to provide economic benefits to [a third party] and a guaranteed return to [the taxpayer].” Unlike the business purpose doctrine, in a sham transaction doctrine analysis, taxpayer motive is inconsequential, provided that there is no function to the transaction aside from the generation of a tax benefit.<sup>49</sup> Courts have also distinguished between sham transactions comprised of transactions which never actually took place (factual shams) and those lacking economic substance (economic shams).<sup>50</sup>

### *a. Economic Shams*

There is no standard definition for an economic sham. The Tax Court described an economic sham as “the expedient of drawing up papers to characterize transactions contrary to objective economic realities and which have no economic significance beyond expected tax benefits.”<sup>51</sup> Other courts have applied different criteria to find an economic sham. For example, other courts have used a similar definition, with the exception that an offending transaction is one that satisfies neither the objective *nor* the subjective of these prongs.<sup>52</sup> Regardless of which formulation is used, the economic sham definition is commonly observed to be functionally equivalent to a test under the economic substance doctrine. In fact, the report by the Joint Committee on Taxation released in 2005 describes the entire sham transaction doctrine as “closely related” to and “sometimes interchangeable” with the economic substance

<sup>46</sup> *United Parcel Serv. of Am., Inc. v. Commissioner*, 254 F.3d 1014 (11th Cir. 2001).

<sup>47</sup> *ACM P'Ship v. Commissioner* (73 T.C.M. 2189).

<sup>48</sup> *Frank Lyon Co. v. United States*, 435 US 561 (1978).

<sup>49</sup> *Kirchman v. C.I.R.* (862 F.2d 1486, 1491).

<sup>50</sup> See, e.g., *Goldstein v. Commissioner* (TBD), distinguishing between transactions which were “sham in substance,” which must generally meet the general standard of economic substance (see below), and “sham in fact,” in which the transaction is deemed to have never actually occurred (i.e., merely a paper transaction).

<sup>51</sup> *Falsetti v. Commissioner* (TBD). Emphasis added.

<sup>52</sup> *Friedman v. Commissioner*.

UNITED STATES

---

doctrine.<sup>53</sup> As such, this particular doctrine is frequently collapsed into the economic substance doctrine.

*b. Shams-in-Fact*

To analyze whether a transaction qualifies as a sham-in-fact is to ask whether it actually occurred in the first place. While in some cases this is obvious (e.g., when securities trades are executed which artificially create tax losses for a taxpayer but, aside from bookkeeping entries, the trades were never executed<sup>54</sup>), in the absence of such egregious conduct, the IRS has a difficult time prevailing under this argument.<sup>55</sup>

*c. Substance over Form*

The substance-over-form doctrine is the proposition that the tax consequences of a transaction or series of transactions should rely on the substance of the underlying activity, rather than on its legal form.<sup>56</sup> The doctrine is predicated on the idea that, should a taxpayer structure a transaction in a manner such that the form yields more advantageous tax consequences than the substance, then the IRS should be able to disregard the form in order to protect Congressional intent.<sup>57</sup> If instead, the substance of a transaction differs from its form in a manner which is disadvantageous to the taxpayer, then the IRS can generally force the taxpayer to abide by the form under the theory that the taxpayer had chosen the form and could have structured the transaction differently if he or she had so chosen.<sup>58</sup>

While seemingly clear on its face, the substance-over-form doctrine is not necessarily easy for the IRS to invoke. The courts have held that the IRS may not disregard a taxpayer's choice of form merely by stating that the substance is different. In *Newman v. Commissioner*, the Second Circuit described a list of criteria that must be taken into account when analyzing whether a transaction's form should be respected, including (i) the existence of a business purpose, (ii) whether the transaction changed the parties' economic interests, (iii) whether the transaction's terms were arm's length terms and (iv) whether the parties respected their own form. Despite these limitations, the substance-over-form doctrine has been frequently applied in a variety of different types of situations, including cases involving leasing transac-

<sup>53</sup> Options to Improve Tax Compliance and Reform Tax Expenditures, 1/27/05, p. 14.

<sup>54</sup> See, e.g., *Brown v. Commissioner* (TBD), *Seykota v. Commissioner* (TBD).

<sup>55</sup> See, e.g., *Dow Chemicals v. United States* (TBD), *IRS v. CM Holdings, Inc.* (TBD), *Winn-Dixie v. Commissioner* (TBD), and *Am. Elec. Power Co. v. United States* (TBD).

<sup>56</sup> See, e.g., *Commissioner v. Court Holding Co.*, 324 U.S. 331 (1941); *True v. United States*, 190 F.3d 1165, 1174 (10th Cir. 1999); *Newman v. Commissioner*, 894 F.2d 560, 562 (2d Cir. 1990); *Kuper v. Commissioner*, 533 F.2d 152, 155 (5th Cir. 1976); *Derr v. Commissioner*, 77 T.C. 708, 722 (1981); Rev. Rul. 2002-69, 2002-2 C.B. 760.

<sup>57</sup> See, e.g., *Crenshaw v. United States*, 450 F.2d 472 (1971) (stating that, "...such a result would completely thwart the Congressional policy to tax transactional realities rather than verbal labels...Otherwise, form, rather than substance, would invariably prevail").

<sup>58</sup> There are situations in which a taxpayer can successfully have its own chosen form of a transaction disregarded, although this is usually very difficult to accomplish and further discussion is beyond the scope of this report.

tions,<sup>59</sup> related parties,<sup>60</sup> transactions between a shareholder/employee and a company,<sup>61</sup> debt versus equity analyses,<sup>62</sup> and whether a property transfer occurred.<sup>63</sup> In short, the substance-over-form doctrine can be generally applied to any situation in which a taxpayer may attempt to either hide or disguise underlying economic activity (or lack thereof) in order to obtain a tax benefit they would otherwise not be entitled to receive.

#### *d. Step Transaction Doctrine*

The step transaction doctrine is arguably better understood as a means of understanding whether the form of a transaction or series of transactions differs from its/their substance. Essentially, a court may treat separate transactions or steps as a single, unified transaction for tax purposes, i.e., “the step transaction doctrine generally applies in cases where a taxpayer seeks to get from point A to point D and does so stopping in between at points B and C. The whole purpose of the unnecessary stops is to achieve tax consequences that differ from those which a direct path from A to D would have produced...courts are not bound by the twisted path taken by the taxpayer, and the intervening stops may be disregarded or rearranged.”<sup>64</sup> By and large, the substance must differ from the form, and the difference has to be abusive from a tax perspective.

Should the IRS successfully assert this doctrine, the applicable court can either disregard certain unnecessary steps or transactions<sup>65</sup> or rearrange them.<sup>66</sup> While the former is more prevalent, in either case the IRS must assert a “... logically plausible alternative explanation that accounts for all the results of the transaction.”<sup>67</sup> It should also be noted that, even if each step or transaction has a business purpose/economic substance, some courts may still apply the doctrine, while others may preclude its use.

One factor that is frequently analyzed with regard to the step transaction doctrine involves the timing between the steps. In short, absent some other indication of the steps being related, the longer the time lapse between steps, the less likely a court will collapse them together. For example: in one case the Tax Court neglected to collapse two steps which were separated by six months,<sup>68</sup> while it chose to collapse a corporate formation, cash capitalization, and subsequent sale of property to the corporation for the cash and all related notes when the entire series of transactions occurred in less than 10 days.<sup>69</sup> To this effect, the time lapse may also affect which test is applied to the facts at issue.<sup>70</sup>

*a. The Three Tests*

Courts have used three distinct tests when deciding whether to apply the step transaction doctrine: (i) binding commitment, (ii) end result, and (3) mutual interdependence.

*i. Binding Commitment*

Courts that use the binding commitment test will only apply the step transaction doctrine if, once the first “step” is taken, the taxpayer was bound to complete the remaining steps. In other words, the steps can only be collapsed into one transaction if, once begun, they were all legally required to occur. As stated by the US Tax Court, “[i]t is seldom used and is applicable only when a substantial period of time has passed between the steps that are subject to scrutiny.”<sup>71</sup> Moreover, due to the overly strict criteria required for its application, “there have been objections to the [binding commitment] test on the ground that result is easily manipulable by taxpayers.”<sup>72</sup> When a court is considering applying the test, it will usually search for a formal commitment to complete the remaining steps (although this is not required).<sup>73</sup>

*ii. The End-Result Test*

The end-result test is used in situations where the IRS asserts that a series of separate transactions were merely parts of one single transaction that were all executed with an ultimate goal in mind. The Tax Court explains, “there is no independent tax recognition of the individual steps unless the taxpayer shows that, at the time the parties engaged in the individual step, its result was the intended end result in and of itself.”<sup>74</sup> As in the binding commitment test, a court will not apply this test unless it can find some proof that the transacting parties intended to achieve the end result over the course of the transactions.<sup>75</sup> Thus, the test can be best understood as a test of the subjective intent of the taxpayer to achieve the end result of the transactions as a whole.<sup>76</sup> Should this be the case, the court may collapse the series of steps or transactions into one.

*iii. The Mutual-Interdependence Test*

Under the mutual-interdependence test, the doctrine will apply if, generally, the steps rely on each other to a degree that any one in particular would have been useless without the others.<sup>77</sup> In short, this test analyzes whether each step is independent of the others, rather than the end result of the steps as a whole. Taxpayers may argue against the application of the doctrine via this test by showing that each step possesses independent economic justification,<sup>78</sup> possibly in the context of comparing the transaction at issue to other similar transactions that are considered justified.<sup>79</sup> This test is often applied in the context of corporate transactions.<sup>80</sup>

<sup>75</sup> 344.

<sup>76</sup> 347.

<sup>77</sup> 352.

<sup>78</sup> 355.

<sup>79</sup> 357.

<sup>80</sup> 358-360.

### *e. The Economic Substance Doctrine*

Since *Frank Lyon Co.*, the economic substance doctrine has stood for the idea that a taxpayer must prove that a transaction has legitimate non-tax economic substance (objectively and/or subjectively) to avoid having the resulting tax consequences recharacterized. Prior to 2010 (when the economic substance doctrine was codified in the Internal Revenue Code), a circuit split had developed within the federal judiciary regarding whether (i) the taxpayer had to show a subjective business purpose AND objective economic substance to prevail,<sup>81</sup> (ii) whether the taxpayer could prevail by showing EITHER of these factors<sup>82</sup> or (iii) whether both were merely two of multiple factors that a court could analyze.

## **2.2 Relation of the economic substance doctrine to Other Anti-Abuse Doctrines**

As previously stated, the economic substance doctrine and other judicially created anti-abuse doctrines overlap in many ways. Some have arguably been subsumed into others (e.g., the business purpose doctrine gradually becoming the subjective prong of the wider economic substance doctrine), while others have been referred to as “interchangeable” in Congressional reports (e.g., the 2005 JCT Report referring to the sham transaction doctrine and economic substance doctrine). To this point, courts have frequently invoked more than one at a time when doing so.<sup>83</sup> One glaring example can be seen in *Coltec Indus.*, in which the court described the economic substance doctrine as merely a composite of the business purpose, substance-over-form, and sham transaction doctrines. However, at a later date the IRS Chief Counsel described the economic substance doctrine, business purpose, step transaction, and sham transaction doctrines as mere subcategories of the substance-over-form doctrine. In short, while there is arguably no formal way to organize these doctrines in relation to each other, they are all tools used to help courts reach a primary goal (determining the economic reality of a transaction in spite of how it was structured by a taxpayer).

## **Part Three: GAAR and taxpayer safeguards**

### **3.1. General overview**

As explained, above, the law concerning the economic substance and substance over form doctrines, which comprise US GAARs, was developed over time by the courts. Accordingly, US GAARs generally were not designed as comprehensive legislation with procedural rules and safeguards. So a taxpayer who disagrees with an examining agent would have the same recourse under these doctrines as a taxpayer would have with issues not involving US GAARs. Such recourse includes administrative appeal (IRS Appeals) and litigation in court, which may require review of existing rulings and case law and their application to the

<sup>81</sup> See, e.g. *ACM*.

<sup>82</sup> See, e.g., *Wells Fargo v. United States*, 143 F.Supp.3d 827 (D. Minn. 2015); *Compaq v. Comm’r*, 277 F.3d 778 (5th Cir. 2015).

UNITED STATES

---

specific case at hand. While the IRS has provided certain institutional support for taxpayers, as discussed below, the measures have been limited. For example, there is no formal administrative practice or process of applying US GAARs to protect taxpayers under US law.

Nevertheless, there are substantive limitations to the application of the economic substance and substance-over-form doctrines as discussed below.

### 3.2. Economic Substance Doctrine

The legislative history of the economic substance doctrine and the codified requirements for its application under § 7701(o) suggest that, for certain business transactions, taxpayers may be entitled to protection from the application of the economic substance doctrine. Specifically, as noted above in section 1.2, the Joint Committee Report stated that the codification of the economic substance doctrine was not meant to alter the tax treatment of business transactions that had been respected. Despite requests from practitioners, the IRS has not yet published a list of bright-line exclusions from application of § 7701(o).<sup>84</sup> Nevertheless, § 7701(o)(5)(C) provides that the determination of whether a transaction is subject to the economic substance doctrine shall be made in the same manner as if § 7701(o) had never been enacted, and § 7701(o)(1) applies “*in the case of any transaction to which the economic substance doctrine is relevant.*” Consistent with the provisions, Notice 2010-62 affirmed that:

*“[T]he IRS will continue to analyze when the economic substance doctrine will apply in the same fashion as it did prior to the enactment of § 7701(o). If authorities, prior to the enactment of § 7701(o), provided that the economic substance doctrine was not relevant to whether certain tax benefits are allowable, the IRS will continue to take the position that the economic substance doctrine is not relevant to whether those tax benefits are allowable.”*

As evidenced by this Notice, the IRS appears to have narrowly interpreted the scope of relevant transactions under the economic substance doctrine. Nevertheless, the legislative history discussed above may provide a “safe harbor” from the application of the economic substance doctrine to the four examples of basic business transactions enumerated in the legislative history.<sup>85</sup>

### 3.3. Substance-Over-Form Doctrine

Unlike the economic substance doctrine, the substance-over-form and the closely related step transaction doctrines apply to all transactions and do not have a carve-out for certain transactions. Taxpayers engaging in a transaction that is not merely transitory or otherwise a sham and that meets the statutory requirements may have an expectation that the transaction would not be recharacterized contrary to its form. This expectation is consistent with the oft-cited words of Judge Learned Hand in the Second Circuit case in *Gregory v. Helvering*: “[a]nyone may so arrange his affairs that his taxes shall be as low as possible; he is not

<sup>84</sup> See American Bar Association Section of Taxation, *Comments on Notice 2010-62* (18 January 2011).

<sup>85</sup> In Notice 2014-58, the IRS itself referred to the House Budget Committee Report as legislative history in support of its guidance on the meaning of the term “transaction” in § 7701(o).

bound to choose that pattern which will best pay the Treasury; there is not even a patriotic duty to increase one's taxes."<sup>86</sup>

More recently, in *Summa Holdings, Inc. v. Commissioner*,<sup>87</sup> a federal appellate court ruled that the substance over form doctrine cannot be used to recharacterize steps taken in order to take advantage of tax benefits permitted under the statute. The Court described the limitation on applying the doctrine as follows:

*"Each word of the 'substance-over-form doctrine', at least as the Commissioner has used it here, should give pause. If the government can undo transactions that the terms of the Code expressly authorize, it's fair to ask what the point of making these terms accessible to the taxpayer and binding on the tax collector is. 'Form' is 'substance' when it comes to law. The words of law (its form) determine content (its substance). How odd, then, to permit the tax collector to reverse the sequence—to allow him to determine the substance of a law and to make it govern 'over' the written form of the law—and to call it a 'doctrine' no less.*

*As it turns out, the Commissioner does not have such sweeping authority. And neither do we. Because Summa Holdings used the DISC and Roth IRAs for their congressionally sanctioned purposes—tax avoidance—the Commissioner had no basis for recharacterizing the transactions and no basis for recharacterizing the law's application to them."*

When a taxpayer engages in additional transactions that allow the transaction benefiting from a tax statute to proceed, the step transaction doctrine may apply as discussed, above. A notable derogation is the case of *Esmark, Inc. v. Commissioner*,<sup>88</sup> in which the Tax Court declined to apply the step transaction doctrine where the other transactions had economic significance. The taxpayer (Esmark) engaged in a multi-step transaction that, following the form, allowed it to dispose of shares it held in its subsidiary without recognizing the gain on the sale of its shares. This was made possible because the buyer first acquired the shares of the seller via a public tender offer and then the seller redeemed those shares using shares in its subsidiary. The government recharacterized the transaction as a sale of the subsidiary's shares to the buyer, followed by redemption of the seller's shares from the public in substance. The court held that the recharacterization impermissibly created fictitious steps and ignored the fact that the buyer's tender offer had an independent economic significance, i.e., of reducing Esmark's outstanding capital stock.

Thus, *Esmark* arguably stands for the principle that the step transaction doctrine could apply to disregard meaningless steps, but cannot create fictitious steps or ignore steps that have independent economic significance. Together with *Summa Holdings*, this case law may serve as a limitation on the government's attempt to apply the substance-over-form doctrine expansively against taxpayers seeking to take advantage of benefits permitted under US federal tax statutes.

Institutionally, the IRS has pursued two initiatives in an effort to show that a taxpayer's rights are on their agenda. The first and most robust is the Taxpayer Advocate Service (TAS). The TAS has evolved in a series of iterations starting in 1979, but, in theory, serves as a

<sup>86</sup> 69 F.2d 809 (2d Cir. 1934). In *Gregory v. Helvering*, the Supreme Court affirmed the recharacterization of a purported corporate reorganization under the substance over form doctrine.

<sup>87</sup> 848 F.3d 779 (6th Cir. 2017).

<sup>88</sup> 90 T.C. 171 (1988).

UNITED STATES

---

taxpayer's ombudsman.<sup>89</sup> In function, the TAS follows issues in the IRS and courts relating to taxpayer rights, and presents two reports each year to the Committee on Ways and Means of the House of Representatives and the Senate Committee on Finance. The first report identifies the objectives of the TAS for the year and the second report takes a comprehensive status report on the TAS' work and findings. Taxpayers can also contact the TAS with inquiries relating to a series of issues, including trouble paying taxes or difficulties in communicating with the IRS, though the TAS has refocused its work scope at times.<sup>90</sup> The true effectiveness in addressing taxpayer needs is unclear.

The second initiative is the publication, "taxpayer's bill of rights," (the "TBOR") which is available on the IRS website.<sup>91</sup> However, the TBOR is not codified and only exists as a framework for the IRS' approach to collecting tax, despite repeated recommendations from the TAS that it be formalized in law or regulation.<sup>92</sup> So, for the time being, the TBOR has no binding effect or legal weight.

The publication lists ten "fundamental rights" that each taxpayer should be aware of when dealing with the IRS, specifically the right to (i) be informed, (ii) quality service, (iii) pay no more than the correct amount of tax, (iv) challenge the IRS's position and be heard, (v) appeal an IRS decision in an independent forum, (vi) finality, (vii) privacy, (viii) confidentiality, (ix) retain representation, and (x) a fair and just tax system.

### *The Right to Be Informed*

This right stands for the idea that each taxpayer should know what is required of them to comply with US tax laws. The right appears to be divided into two areas. On one hand, the IRS has committed to making its publications, forms, notices, correspondence and instructions easy to understand and, if a taxpayer requires more information, the IRS will also post clarifying information online (either on its website or via social media). On the other, the IRS has committed to ensuring that notices regarding outstanding tax obligations/liability are clear, contain all required information, and provide explanations as to why the obligation exists in the first place. In short, a taxpayer should have the right to not only to know what the law is, but also how it is affecting them and how they can best comply with it.

### *The Right to Quality Service*

This right focuses more on the taxpayer's actual interactions with the IRS. Specifically, the IRS has stated that taxpayers have the right to receive prompt, courteous, and professional assistance when dealing with the IRS, and that the IRS will objectively listen to a taxpayer should they have any questions. The IRS has also committed to contact taxpayers only

<sup>89</sup> For discussion, see Christians, Allison, *Taxpayer Rights in the United States* (October 14, 2016). "Derecho Tributario Y Derechos Humanos/tax Law and Human Rights", César Alejandro Ruiz Jiménez, ed. (2016).

<sup>91</sup> See IRS Publication 1, *Your Rights as a Taxpayer*. (Rev. 12-2014), available at <https://www.irs.gov/pub/irs-pdf/p1.pdf>.

<sup>92</sup> For discussion, see Christians, Allison, *Taxpayer Rights in the United States* (October 14, 2016). "Derecho Tributario Y Derechos Humanos/tax Law and Human Rights", César Alejandro Ruiz Jiménez, ed. (2016).

during reasonable hours when collecting tax, and will be courteous and professional during these interactions. In short, a taxpayer should have the right to have all interactions with the IRS be professional and transparent.

#### *The Right to Pay No More than the Correct Amount of Tax*

Taxpayers should have the right to file for refunds if it is determined that they have overpaid. To this point, the IRS will allow a taxpayer to provide information substantiating such overpayment and file an amended return. The IRS will also remove amounts due for a variety of other reasons (e.g., the statute of limitations has expired). The IRS will also abate interest that accrues due to its own unreasonable delay, and will consider compromise offers from taxpayers regarding their tax debt rather than demand full payment in every situation.

#### *The Right to Challenge the IRS's Position and Be Heard*

The above notwithstanding, should a taxpayer choose to challenge the IRS's position, they should be made aware of how to do this and should be able to do so promptly. Specifically, the IRS will give a taxpayer a 60-day window to correct minor errors on a tax return and has committed to adjusting the return accordingly and providing documentation to the taxpayer should the error be corrected. Should the IRS choose not to agree with the taxpayer, it will inform the taxpayer of the adjustment, provide an explanation as to why it has made the adjustment, and notify them of (i) their right to challenge this position in the Tax Court and (ii) how to do so. Similarly, the IRS has committed to giving taxpayers the opportunity to challenge deficiencies/adjustments before an independent Office of Appeals before taking enforcement action (i.e., garnishing wages or levying a bank account).

#### *The Right to Appeal an IRS Decision in an Independent Forum*

As discussed in the above sections, a taxpayer has the right to challenge IRS determinations with regard to their tax liability in front of the Office of Appeals and/or the Tax Court. Moreover, the IRS has made a publication available that informs taxpayers of their rights in these cases.

#### *The Right to Finality*

Taxpayers should be aware of the timing with regard to disputes with the IRS, such as how long a tax year is open for audit, how long the IRS has to collect unpaid taxes, how long a taxpayer has to file a refund claim, etc. In short, a taxpayer should know when an issue will be permanently resolved.

#### *The Right to Privacy*

A taxpayer should have the right to protect certain items and wages from IRS levy. A taxpayer

## UNITED STATES

---

should also have the right to withhold certain information when making a settlement offer, and the IRS has committed to not seeking intrusive and extraneous information about a taxpayer unless there is a reasonable indication that the taxpayer has underreported income. In short, the taxpayer should be free from having the IRS pry into their affairs without due process.

### *The Right to Confidentiality*

The IRS will not disclose tax information to third parties without prior authorization from the taxpayer, nor will it contact third parties with regard to a taxpayer's liability without prior notification. Taxpayers generally have the same confidentiality protection in dealing with the IRS that they have with attorneys, and tax return preparers who disclose/use a taxpayer's information knowingly or recklessly may be subject to criminal penalties.

### *The Right to Retain Representation*

Taxpayers may retain advisors (attorneys, CPAs, or enrolled agents) when interacting with the IRS. Moreover, as in most criminal proceedings an IRS interview must be suspended if a taxpayer requests a representative. Such representatives may represent a taxpayer without them being present provided they have been granted power of attorney, and a taxpayer may request assistance from an independent Low-Income Taxpayer Clinic if their income falls below a certain level.

### *The Right to a Fair and Just Tax System*

Taxpayers should have the right to enter into a payment plan with the IRS if they cannot pay their tax debt in full, as well as propose compromises to the IRS with regard to the debt. The IRS publishes information about local living costs in order to better assess when a taxpayer should be able to offer compromises and enter into payment plans, and has committed to not levying all of a taxpayer's wages (so that the taxpayer can meet such costs). Moreover, taxpayers have access to the Taxpayer Advocate Service and Low-Income Taxpayer Clinics to assist them with IRS disputes, and can demand an abatement on certain liabilities and interest, provided they have been unfairly assessed (e.g., if the statute of limitations has run, or if the interest accrued due to unreasonable delay on the part of the IRS).

In short, the IRS has published guidelines outlining how it intends to interact with taxpayers both proactively and over the course of disputes. It has committed to making materials and resources available to better inform taxpayers, to deal with taxpayers and their concerns in a professional and helpful manner, and to respect a taxpayer's privacy.

DEPARTMENT OF THE TREASURY TECHNICAL EXPLANATION OF THE  
CONVENTION BETWEEN THE GOVERNMENT OF THE UNITED STATES OF AMERICA  
AND THE GOVERNMENT OF THE KINGDOM OF DENMARK FOR THE  
AVOIDANCE OF DOUBLE TAXATION AND THE PREVENTION OF FISCAL EVASION  
WITH RESPECT TO TAXES ON INCOME SIGNED AT WASHINGTON, AUGUST 19, 1999

GENERAL EFFECTIVE DATE UNDER ARTICLE 29: 1 JANUARY 2001

INTRODUCTION

This is a Technical Explanation of the Convention and Protocol between the United States and Denmark signed at Washington on August 19, 1999 (the “Convention” and “Protocol”). References are made to the Convention between the United States and Denmark for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income signed at Washington, D.C., on May 6, 1948 (the “prior Convention”). The Convention replaces the prior Convention.

Negotiations took into account the U.S. Treasury Department's current tax treaty policy, as reflected in the U.S. Treasury Department's Model Income Tax Convention of September 20, 1996 (the “U.S. Model”) and its recently negotiated tax treaties, the Model Income Tax Convention on Income and on Capital, published by the OECD in 1992 and amended in 1994, 1995 and 1997 (the “OECD Model”), and recent tax treaties concluded by Denmark.

The Technical Explanation is an official guide to the Convention and Protocol. It reflects the policies behind particular Convention provisions, as well as understandings reached with respect to the application and interpretation of the Convention and Protocol. In the discussions of each Article in this explanation, the relevant portions of the Protocol are discussed. This Technical Explanation has been provided to Denmark. References in the Technical Explanation to “he” or “his” should be read to mean “he or she” and “his or her.”

## ARTICLE 1

### General Scope

#### *Paragraph 1*

Paragraph 1 of Article 1 provides that the Convention applies to residents of the United States or Denmark, except where the terms of the Convention provide otherwise. Under Article 4 (Residence), a person is generally treated as a resident of a Contracting State if that person is, under the laws of that Contracting State, liable to tax therein by reason of his domicile or other similar criteria. If, however, a person is considered a resident of both Contracting States, Article 4 provides rules for determining a single state of residence (or no state of residence). This determination governs for all purposes of the Convention.

Certain provisions are applicable to persons who may not be residents of either Contracting State. For example, Article 19 (Government Service) may apply to an employee of a Contracting State who is resident in neither State. Paragraph 1 of Article 24 (Non-Discrimination) applies to nationals of the Contracting States. Under Article 26 (Exchange of Information), information may be exchanged with respect to residents of third states.

#### *Paragraph 2*

Paragraph 2 states the generally accepted relationship both between the Convention and domestic law and between the Convention and other agreements between the Contracting States (i.e., that no provision in the Convention may restrict any exclusion, exemption, deduction, credit or other benefit accorded by the tax laws of the Contracting States, or by any other agreement between the Contracting States). The relationship between the non-discrimination provisions of

the Convention and other agreements is not addressed in paragraph 2 but in paragraph 3.

For example, if a deduction would be allowed under the U.S. Internal Revenue Code (the "Code") in computing the U.S. taxable income of a resident of Denmark, the deduction also is allowed to that person in computing taxable income under the Convention. Paragraph 2 also means that the Convention may not increase the tax burden on a resident of a Contracting State beyond the burden determined under domestic law. Thus, a right to tax given by the Convention cannot be exercised unless that right also exists under internal law.

It follows that under the principle of paragraph 2 a taxpayer's liability to U.S. tax need not be determined under the Convention if the Code would produce a more favorable result. A taxpayer may not, however, choose among the provisions of the Code and the Convention in an inconsistent manner in order to minimize tax. For example, assume that a resident of Denmark has three separate businesses in the United States. One is a profitable permanent establishment and the other two are trades or businesses that would earn taxable income under the Code but that do not meet the permanent establishment threshold tests of the Convention. One is profitable and the other incurs a loss. Under the Convention, the income of the permanent establishment is taxable, and both the profit and loss of the other two businesses are ignored. Under the Code, all three would be subject to tax, but the loss would be offset against the profits of the two profitable ventures. The taxpayer may not invoke the Convention to exclude the profits of the profitable trade or business and invoke the Code to claim the loss of the loss trade or business against the profit of the permanent establishment. (See Rev. Rul. 84-17, 1984-1 C.B. 308.) If, however, the taxpayer invokes the Code for the taxation of all three ventures, he would not be precluded from invoking the Convention with respect, for example, to any dividend income he may receive from the United States that is not effectively connected with any of his business activities in the United States.

Similarly, nothing in the Convention can be used to deny any benefit granted by any other agreement between the United States and Denmark. For example, if certain benefits are provided for military personnel or military contractors under a Status of Forces Agreement between the United States and Denmark, those benefits or protections will be available to residents of the Contracting States regardless of any provisions to the contrary (or silence) in the Convention.

### *Paragraph 3*

Paragraph 3 specifically relates to non-discrimination obligations of the Contracting States under other agreements. The provisions of paragraph 3 are an exception to the rule provided in paragraph 2 of this Article under which the Convention shall not restrict in any manner any benefit now or hereafter accorded by any other agreement between the Contracting States.

Subparagraph (a) of paragraph 3 provides that, notwithstanding any other agreement to which the Contracting States may be parties, a dispute concerning whether a measure is within the scope of this Convention shall be considered only by the competent authorities of the Contracting States, and the procedures under this Convention exclusively shall apply to the dispute. Thus, procedures for dealing with disputes that may be incorporated into trade, investment, or other agreements between the Contracting States shall not apply for the purpose of determining the

scope of the Convention.

Subparagraph (b) of paragraph 3 provides that, unless the competent authorities determine that a taxation measure is not within the scope of this Convention, the non-discrimination obligations of this Convention exclusively shall apply with respect to that measure, except for such national treatment or most-favored-nation ("MFN") obligations as may apply to trade in goods under the General Agreement on Tariffs and Trade ("GATT"). No national treatment or MFN obligation under any other agreement shall apply with respect to that measure. Thus, unless the competent authorities agree otherwise, any national treatment and MFN obligations undertaken by the Contracting States under agreements other than the Convention shall not apply to a taxation measure, with the exception of GATT as applicable to trade in goods.

Subparagraph (c) of paragraph 3 defines a "measure" broadly. It would include, for example, a law, regulation, rule, procedure, decision, administrative action or guidance, or any other form of governmental action or guidance.

#### *Paragraph 4*

Paragraph 4 contains the traditional saving clause found in U.S. tax treaties. The Contracting States reserve their rights, except as provided in paragraph 5, to tax their residents and citizens as provided in their internal laws, notwithstanding any provisions of the Convention to the contrary. For example, if a resident of Denmark performs independent personal services in the United States and the income from the services is not attributable to a fixed base in the United States, Article 14 (Independent Personal Services) would by its terms prevent the United States from taxing the income. If, however, the resident of Denmark is also a citizen of the United States, the saving clause permits the United States to include the remuneration in the worldwide income of the citizen and subject it to tax under the normal Code rules (i.e., without regard to Code section 894(a)). However, paragraph 5(a) of this Article preserves the benefits of special foreign tax credit rules applicable to the U.S. taxation of certain U.S. income of its citizens resident in Denmark. See paragraph 2 of Article 23 (Relief from Double Taxation).

For purposes of the saving clause, "residence" is determined under Article 4 (Residence). Thus, if an individual who is not a U.S. citizen is a resident of the United States under the Code, and is also a resident of Denmark under its law, and that individual has a permanent home available to him in Denmark and not in the United States, he would be treated as a resident of Denmark under Article 4 and for purposes of the saving clause. The United States would not be permitted to apply its statutory rules to that person if they are inconsistent with the treaty. Thus, an individual who is a U.S. resident under the Internal Revenue Code but who is deemed to be a resident of Denmark under the tie-breaker rules of Article 4 (Residence) would be subject to U.S. tax only to the extent permitted by the Convention. However, the person would be treated as a U.S. resident for U.S. tax purposes other than determining the individual's U.S. tax liability. For example, in determining under Code section 957 whether a foreign corporation is a controlled foreign corporation, shares in that corporation held by the individual would be considered to be held by a U.S. resident. As a result, other U.S. citizens or residents might be deemed to be United States shareholders of a controlled foreign corporation subject to current inclusion of Subpart F income recognized by the corporation. See Treas. Reg. section 301.7701(b)-7(a)(3).

Under paragraph 4 each Contracting State also reserves its right to tax former citizens and long-term residents whose loss of citizenship or long-term residence had as one of its principal purposes the avoidance of tax. The United States generally treats an individual as having a principal purpose to avoid tax if

- (a) the average annual net income tax of such individual for the period of 5 taxable years ending before the date of the loss of status is greater than \$100,000, or
- (b) the net worth of such individual as of such date is \$500,000 or more.

An individual shall not be treated as a lawful permanent resident for any taxable year if such individual is treated as a resident of the foreign country under the provisions of a tax treaty between the United States and the foreign country and the individual does not waive the benefits of such treaty applicable to residents of the foreign country. This provision may be applied for a period of 10 years following such loss. In the United States, such a former citizen or long-term resident is taxable in accordance with the provisions of section 877 of the Code.

Some provisions are intended to provide benefits to citizens and residents even if such benefits do not exist under internal law. Paragraph 5 sets forth certain exceptions to the saving clause that preserve these benefits for citizens and residents of the Contracting States. Subparagraph (a) lists certain provisions of the Convention that are applicable to all citizens and residents of a Contracting State, despite the general saving clause rule of paragraph 3:

- (i) Paragraph 2 of Article 9 (Associated Enterprises) grants the right to a correlative adjustment with respect to income tax due on profits reallocated under Article 9;

- (ii) Paragraph 7 of Article 13 (Capital Gains) allows a resident to elect to be treated in his State of residence as having alienated and repurchased a property where the gain has been subject to tax in the other State, and paragraph 8 permits the competent authorities to coordinate the timing of the recognition of gain with respect to cross-border reorganizations;

- (iii) Paragraphs 1(c), 2 and 5 of Article 18 (Pensions, Social Security, Annuities, Alimony and Child Support Payments) deal with certain pension benefits, social security benefits and child support payments, respectively. Subparagraph 1(c) requires a Contracting State to treat certain pension benefits as arising in the other Contracting State, even if they would otherwise be treated as arising in the first-mentioned State under its domestic law. The inclusion of paragraph 2 in the exceptions to the saving clause means that the granting of exclusive taxing right of social security benefits to the paying country applies to deny, for example, to the United States the right to tax its citizens and residents on social security benefits paid by Denmark. The inclusion of paragraph 5, which exempts child support payments from taxation by the State of residence of the recipient, means that if a resident of Denmark pays child support to a citizen or resident of the United States, the United States may not tax the recipient;

- (iv) Article 23 (Relief from Double Taxation) confirms the benefit of a credit to citizens and residents of one Contracting State for income taxes paid to the other;

- (v) Article 24 (Non-Discrimination) requires one Contracting State to grant

national treatment to residents and citizens of Denmark in certain circumstances. Excepting this Article from the saving clause requires, for example, that the United States give such benefits to a resident or citizen of Denmark even if that person is a citizen of the United States;

(vi) Article 25 (Mutual Agreement Procedure) may confer benefits on citizens and residents of the Contracting States.

For example, the statute of limitations may be waived for refunds and the competent authorities are permitted to use a definition of a term that differs from the internal law definition. As with the foreign tax credit, these benefits are intended to be granted by a Contracting State to its citizens and residents.

Subparagraph (b) of paragraph 5 provides a different set of exceptions to the saving clause. The benefits referred to are all intended to be granted to temporary residents of a Contracting State (for example, in the case of the United States, holders of non-immigrant visas), but not to citizens or to persons who have acquired permanent residence in the other Contracting State. If beneficiaries of these provisions travel from one of the Contracting States to the other, and remain in the other long enough to become residents under its internal law, but do not acquire permanent residence status (i.e., in the U.S. context, they do not become "green card" holders) and are not citizens of the other Contracting State, the host State will continue to grant these benefits even if they conflict with the statutory rules. The benefits preserved by this paragraph are the host country exemptions for the following items of income: government service salaries and pensions under Article 19 (Government Service); certain income of visiting students and trainees under Article 20 (Students and Trainees); and the income of diplomatic agents and consular officers under Article 28 (Diplomatic Agents and Consular Officers).

## ARTICLE 2 Taxes Covered

This Article specifies the U.S. taxes and the Danish taxes to which the Convention applies. Unlike Article 2 in the OECD Model, this Article does not contain a general description of the types of taxes that are covered (i.e., income taxes), but only a listing of the specific taxes covered for both of the Contracting States. With two exceptions, the taxes specified in Article 2 are the covered taxes for all purposes of the Convention. A broader coverage applies, however, for purposes of Articles 24 (Non-Discrimination) and 26 (Exchange of Information). Article 24 (Non-Discrimination) applies with respect to all taxes, including those imposed by state and local governments. Article 26 (Exchange of Information) applies with respect to all taxes imposed at the national level.

Subparagraph 1(a) provides that the United States covered taxes are the Federal income taxes imposed by the Code, together with the excise taxes imposed with respect to private foundations (Code sections 4940 through 4948). Although they may be regarded as income taxes, social security taxes (Code sections 1401, 3101, 3111 and 3301) are specifically excluded from coverage. It is expected that social security taxes will be dealt with in bilateral Social Security Totalization Agreements, which are negotiated and administered by the Social Security

Administration. Except with respect to Article 24 (Non-Discrimination), state and local taxes in the United States are not covered by the Convention.

In this Convention, like the U.S. Model, the Accumulated Earnings Tax and the Personal Holding Companies Tax are covered taxes because they are income taxes and they are not otherwise excluded from coverage. Under the Code, these taxes will not apply to most foreign corporations because of a statutory exclusion or the corporation's failure to meet a statutory requirement.

Subparagraph 1(b) specifies the existing taxes of Denmark that are covered by the Convention. These taxes are the income tax to the State (indkomstskatten til staten), the municipal income tax (den kommunale indkomstskat); the income tax to the county municipalities (den amtskommunale indkomstskat); and the taxes imposed under the Hydrocarbon Tax Act (skatter i henhold til kulbrinteskatteloven).

Under paragraph 2, the Convention will apply to any taxes that are identical, or substantially similar, to those enumerated in paragraph 1, and which are imposed in addition to, or in place of, the existing taxes after the date of signature of the Convention. The paragraph also provides that the competent authorities of the Contracting States will notify each other of significant changes in their taxation laws or of other laws that affect their obligations under the Convention. The use of the term "significant" means that changes must be reported that are of significance to the operation of the Convention. Other laws that may affect a Contracting State's obligations under the Convention may include, for example, laws affecting bank secrecy.

The competent authorities are also obligated to notify each other of official published materials concerning the application of the Convention. This requirement encompasses materials such as technical explanations, regulations, rulings and judicial decisions relating to the Convention.

### ARTICLE 3 General Definitions

Paragraph 1 defines a number of basic terms used in the Convention. Certain others are defined in other articles of the Convention. For example, the term "resident of a Contracting State" is defined in Article 4 (Residence). The term "permanent establishment" is defined in Article 5 (Permanent Establishment). The terms "dividends," "interest" and "royalties" are defined in Articles 10, 11 and 12, respectively. The introduction to paragraph 1 makes clear that these definitions apply for all purposes of the Convention, unless the context requires otherwise. This latter condition allows flexibility in the interpretation of the treaty in order to avoid unintended results. Terms that are not defined in the Convention are dealt with in paragraph 2.

Subparagraph 1(a) defines the term "person" to include an individual, an estate, a trust, a partnership, a company and any other body of persons. The definition is significant for a variety of reasons. For example, under Article 4, only a "person" can be a "resident" and therefore eligible for most benefits under the treaty. Also, all "persons" are eligible to claim relief under

## Article 25 (Mutual Agreement Procedure).

The term "company" is defined in subparagraph 1(b) as a body corporate or an entity treated as a body corporate for tax purposes according to the laws of the state where it is organized.

The terms "enterprise of a Contracting State" and "enterprise of Denmark" are defined in subparagraph 1(c) as an enterprise carried on by a resident of a Contracting State and an enterprise carried on by a resident of Denmark. The term "enterprise" is not defined in the Convention, nor is it defined in the OECD Model or its Commentaries. Despite the absence of a clear, generally accepted meaning for the term "enterprise," the term is understood to refer to any activity or set of activities that constitute a trade or business.

Like the U.S. Model, subparagraph 1(c) also provides that these terms also encompass an enterprise conducted through an entity (such as a partnership) that is treated as fiscally transparent in the Contracting State where the entity's owner is resident. This phrase has been included in the Convention in order to address more explicitly some of the problems presented by fiscally transparent entities. In accordance with Article 4 (Residence), entities that are fiscally transparent in the country in which their owners are resident are not considered to be residents of a Contracting State (although income derived by such entities may be taxed as the income of a resident, if taxed in the hands of resident partners or other owners). Given the approach taken in Article 4, an enterprise conducted by such an entity arguably could not qualify as an enterprise of a Contracting State under the OECD Model because the OECD definition of enterprise requires that the enterprise be conducted by a resident, although most countries would attribute the enterprise to the owners of the entity in such circumstances. The definition in the Convention is intended to make clear that an enterprise conducted by such an entity will be treated as carried on by a resident of a Contracting State to the extent its partners or other owners are residents. This approach is consistent with the Code, which under section 875 attributes a trade or business conducted by a partnership to its partners and a trade or business conducted by an estate or trust to its beneficiaries.

An enterprise of a Contracting State need not be carried on in that State. It may be carried on in the other Contracting State or in a third state (e.g., a U.S. corporation doing all of its business in Denmark would still be a U.S. enterprise).

Subparagraph 1(d) defines the term "international traffic." The term generally means any transport by a ship or aircraft except when transport is solely between places within a Contracting State. This definition is applicable principally in the context of Article 8 (Shipping and Air Transport). The definition in the OECD Model refers to the operator of the ship or aircraft having its place of effective management in a Contracting State (i.e., being a resident of that State). The present Convention does not include this limitation. The broader definition combines with paragraphs 2 and 3 of Article 8 to exempt from tax by the source State income from the rental of ships, aircraft or containers that is earned both by lessors that are operators of ships and aircraft and by those lessors that are not (e.g., banks or container leasing companies).

The exclusion from international traffic of transport solely between places within one of

the Contracting States means, for example, that carriage of goods or passengers solely between New York and Chicago would not be treated as international traffic, even if carried by a Danish carrier. The substantive taxing rules of the Convention relating to the taxation of income from transport, principally Article 8 (Shipping and Air Transport), therefore, would not apply to income from such carriage. Thus, if the carrier engaged in internal U.S. traffic were a resident of Denmark (assuming that were possible under U.S. law), the United States would not be required to exempt the income from that transport under Article 8. The income would, however, be treated as business profits under Article 7 (Business Profits), and therefore would be taxable in the United States only if attributable to a U.S. permanent establishment of the foreign carrier, and then only on a net basis. The gross basis U.S. tax imposed by section 887 would never apply under the circumstances described.

If, however, goods or passengers are carried by a carrier resident in Denmark from a non-U.S. port to, for example, New York, and some of the goods or passengers continue on to Chicago, the entire transport would be international traffic. This would be true if the international carrier transferred the goods at the U.S. port of entry from a ship to a land vehicle, or even if the overland portion of the trip in the United States was handled by an independent carrier under contract with the original international carrier, so long as both parts of the trip were reflected in original bills of lading. For this reason, the Convention, like the U.S. Model, refers, in the definition of "international traffic," to "such transport" being solely between places in that State, while the OECD Model refers to the ship or aircraft being operated solely between such places. The Convention definition is intended to make clear that, as in the above example, even if the goods are carried on a different aircraft for the internal portion of the international voyage than is used for the overseas portion of the trip, the definition applies to that internal portion as well as the external portion.

Finally, a "cruise to nowhere," i.e., a cruise beginning and ending in a port in the same Contracting State with no stops in a foreign port, would not constitute international traffic.

Subparagraphs 1(e)(i) and (ii) define the term "competent authority" for the United States and Denmark, respectively. The U.S. competent authority is the Secretary of the Treasury or his delegate. The Secretary of the Treasury has delegated the competent authority function to the Commissioner of Internal Revenue, who in turn has delegated the authority to the Assistant Commissioner (International). With respect to interpretative issues, the Assistant Commissioner acts with the concurrence of the Associate Chief Counsel (International) of the Internal Revenue Service. The Danish competent authority is the Minister for Taxation or his authorized representative.

The term "United States" is defined in subparagraph 1(f) to mean the United States of America, including the states, the District of Columbia and the territorial sea of the United States. The term does not include Puerto Rico, the Virgin Islands, Guam or any other U.S. possession or territory. This Convention explicitly includes certain areas under the sea within the definition of the United States. For certain purposes, the definition is extended to include the seabed and subsoil of undersea areas adjacent to the territorial sea of the United States. This extension applies to the extent that the United States exercises sovereignty in accordance with international law for the purpose of natural resource exploration and exploitation of such areas. This extension of the

definition applies, however, only if the person, property or activity to which the Convention is being applied is connected with such natural resource exploration or exploitation. Thus, it would not include any activity involving the sea floor of an area over which the United States exercised sovereignty for natural resource purposes if that activity was unrelated to the exploration and exploitation of natural resources.

The term "Denmark" is defined in subparagraph 1(g). It means the Kingdom of Denmark, including any area outside the territorial sea of Denmark which in accordance with international law has been or may hereafter be designated under Danish laws as an area within which Denmark may exercise sovereign rights with respect to the exploration and exploitation of the natural resources of the sea-bed or its subsoil and the superjacent waters and with respect to other activities for the exploration and economic exploitation of the area.

Thus, the Convention defines each of the countries as including its continental shelf. At the time the prior Convention was negotiated, the concept of the "continental shelf" as included within the definition of a country was just emerging. Denmark did not claim rights over its continental shelf until 1963; in the United States, a similar situation pertained. However, over the past three decades each country has imposed taxes on oil and gas exploration and exploitation activities on its continental shelf. The Convention simply clarifies the practice of both parties under the present treaty in terms consistent with modern international law and with the domestic laws of both countries.

The term "Denmark" does not comprise the Faroe Islands or Greenland. Paragraph 2 of the Protocol provides that the Convention may be extended to any territory or U.S. possession which imposes taxes substantially similar to those covered by the Convention. Such an extension would require the conclusion of a supplementary Convention which would be subject to ratification in the case of the United States, and approval in accordance with Denmark's constitutional procedures.

The term "national," as it relates to the United States and Denmark, is defined in subparagraphs 1(h)(i) and (ii), respectively. This term is relevant for purposes of Articles 19 (Government Service) and 24 (Non-Discrimination). A national of one of the Contracting States is

- (1) an individual who is a citizen or national of that State, and
- (2) any legal person, partnership or association deriving its status as such from the law in force in the State where it is established.

This definition is closely analogous to that found in the OECD Model.

The term "qualified governmental entity" is defined in subparagraph 1(i). This definition is relevant for purposes of Articles 4 (Residence) and 10 (Dividends). The term means:

- (i) the Government of a Contracting State or of a political subdivision or local authority of the Contracting State;
- (ii) A person wholly owned by a governmental entity described in subparagraph (i), that satisfies certain organizational and funding standards; and
- (iii) a pension fund that meets the standards of subparagraphs (i) and (ii)

and that provides government service pension benefits, described in Article 19 (Government Service).

A qualified governmental entity described in subparagraphs (ii) and (iii) may not engage in any commercial activity.

Paragraph 2 provides that in the application of the Convention, any term used but not defined in the Convention will have the meaning that it has under the law of the Contracting State whose tax is being applied, unless the context requires otherwise. The paragraph makes clear that if the term is defined under both the tax and non-tax laws of a Contracting State, the definition in the tax law will take precedence over the definition in the non-tax laws. Finally, there also may be cases where the tax laws of a State contain multiple definitions of the same term. In such a case, the definition used for purposes of the particular provision at issue, if any, should be used.

If the meaning of a term cannot be readily determined under the law of a Contracting State, or if there is a conflict in meaning under the laws of the two States that creates difficulties in the application of the Convention, the competent authorities, as indicated in Article 25 (Mutual Agreement Procedure), may establish a common meaning in order to prevent double taxation or to further any other purpose of the Convention. This common meaning need not conform to the meaning of the term under the laws of either Contracting State.

The language of paragraph 2 makes clear that the reference to the internal law of a Contracting State means the law in effect at the time the Convention is being applied, not the law as in effect at the time the Convention was signed. The use of “ambulatory” definitions, however, may lead to results that are at variance with the intentions of the negotiators and of the Contracting States when the Convention was negotiated and ratified. The reference in both paragraphs 1 and 2 to the caveat “unless the context otherwise requires” a definition different from the treaty definition, in paragraph 1, or from the internal law definition of the Contracting State whose tax is being imposed, under paragraph 2, refers to a circumstance where the result intended by the negotiators or by the Contracting States is different from the result that would obtain under either the paragraph 1 definition or the statutory definition. Thus, flexibility in defining terms is necessary and permitted.

#### ARTICLE 4 Residence

This Article sets forth rules for determining whether a person is a resident of a Contracting State for purposes of the Convention. As a general matter, only residents of the Contracting States may claim the benefits of the Convention. The treaty definition of residence is to be used only for purposes of the Convention. The fact that a person is determined to be a resident of a Contracting State under Article 4 does not necessarily entitle that person to the benefits of the Convention. In addition to being a resident, a person also must qualify for benefits under Article 22 (Limitation on Benefits) in order to receive benefits conferred on residents of a Contracting State.

The determination of residence for treaty purposes looks first to a person's liability to tax

as a resident under the respective taxation laws of the Contracting States. As a general matter, a person who, under those laws, is a resident of one Contracting State and not of the other need look no further. For purposes of the Convention, that person is a resident of the State in which he is resident under internal law. If, however, a person is resident in both Contracting States under their respective taxation laws, the Article proceeds, where possible, to use tie-breaker rules to assign a single State of residence to such a person for purposes of the Convention.

*Paragraph 1*

The term "resident of a Contracting State" is defined in paragraph 1. In general, this definition incorporates the definitions of residence in U.S. and Danish law by referring to a resident as a person who, under the laws of a Contracting State, is subject to tax there by reason of his domicile, residence, citizenship, place of management, place of incorporation, or any other similar criterion. Thus, residents of the United States include aliens who are considered U.S. residents under Code section 7701(b). Subparagraphs (a) through (d) each address special cases that may arise in the context of Article 4.

Certain entities that are nominally subject to tax but that in practice rarely pay tax also would generally be treated as residents and therefore accorded treaty benefits. For example, RICs, REITs and REMICs are all residents of the United States for purposes of the treaty. Although the income earned by these entities normally is not subject to U.S. tax in the hands of the entity, they are taxable to the extent that they do not currently distribute their profits, and therefore may be regarded as "liable to tax." They also must satisfy a number of requirements under the Code in order to be entitled to special tax treatment.

Subparagraph (a) provides that a person who is liable to tax in a Contracting State only in respect of income from sources within that Contracting State will not be treated as a resident of that Contracting State for purposes of the Convention. Thus, a consular official of Denmark who is posted in the United States, who may be subject to U.S. tax on U.S. source investment income, but is not taxable in the United States on non-U.S. source income, would not be considered a resident of the United States for purposes of the Convention. (See Code section 7701(b)(5)(B)). Similarly, an enterprise of Denmark with a permanent establishment in the United States is not, by virtue of that permanent establishment, a resident of the United States. The enterprise generally is subject to U.S. tax only with respect to its income that is attributable to the U.S. permanent establishment, not with respect to its worldwide income, as it would be if it were a U.S. resident.

Subparagraph (b) provides that certain tax-exempt entities such as pension funds and charitable organizations will be regarded as residents regardless of whether they are generally liable for income tax in the State where they are established. An entity will be described in this subparagraph if it is generally exempt from tax by reason of the fact that it is organized and operated exclusively to perform a charitable or similar purpose or to provide pension or similar benefits to employees, including self-employed individuals. The reference to "similar benefits" is intended to encompass employee benefits, such as health and disability benefits.

The inclusion of this provision is intended to clarify the generally accepted practice of

treating an entity that would be liable for tax as a resident under the internal law of a State but for a specific exemption from tax (either complete or partial) as a resident of that Contracting State for purposes of paragraph 1. The reference to a general exemption is intended to reflect the fact that under U.S. law, certain organizations that generally are considered to be tax-exempt entities may be subject to certain excise taxes or to income tax on their unrelated business income. Thus, a U.S. pension trust, or an exempt section 501(c) organization (such as a U.S. charity) that is generally exempt from tax under U.S. law is considered a resident of the United States for all purposes of the treaty.

Subparagraph (c) specifies that a qualified governmental entity (as defined in Article 3) is to be treated as a resident of the Contracting State when it is established.

Subparagraph (d) addresses special issues presented by fiscally transparent entities such as partnerships and certain estates and trusts. This subparagraph applies to any resident of a Contracting State who is entitled to income derived through an entity that is treated as fiscally transparent under the laws of either Contracting State. Entities falling under this description in the United States would include partnerships, common investment trusts under section 584 and grantor trusts. This paragraph also applies to U.S. limited liability companies ("LLC"s) that are treated as partnerships for U.S. tax purposes.

Subparagraph (d) provides that an item of income derived by such a fiscally transparent entity will be considered to be derived by a resident of a Contracting State if the resident is treated under the taxation laws of the State where he is resident as deriving the item of income. For example, if a corporation resident in Denmark distributes a dividend to an entity that is treated as fiscally transparent for U.S. tax purposes, the dividend will be considered derived by a resident of the United States only to the extent that the taxation laws of the United States treat one or more U.S. residents (whose status as U.S. residents is determined, for this purpose, under U.S. tax laws) as deriving the dividend income for U.S. tax purposes. In the case of a partnership, the persons who are, under U.S. tax laws, treated as partners of the entity would normally be the persons whom the U.S. tax laws would treat as deriving the dividend income through the partnership. Thus, it also follows that persons whom the U.S. treats as partners but who are not U.S. residents for U.S. tax purposes may not claim a benefit for the dividend paid to the entity under the Convention. Although these partners are treated as deriving the income for U.S. tax purposes, they are not residents of the United States for purposes of the treaty. If, however, they are treated as residents of a third country under the provisions of an income tax convention which that country has with Denmark, they may be entitled to claim a benefit under that convention. In contrast, if an entity is organized under U.S. laws and is classified as a corporation for U.S. tax purposes, dividends paid by a corporation resident in the other Contracting State to the U.S. entity will be considered derived by a resident of the United States since the U.S. corporation is treated under U.S. taxation laws as a resident of the United States and as deriving the income.

These results would obtain even if the entity were viewed differently under the tax laws of Denmark (e.g., as not fiscally transparent in the first example above where the entity is treated as a partnership for U.S. tax purposes or as fiscally transparent in the second example where the entity is viewed as not fiscally transparent for U.S. tax purposes). These results also follow regardless of where the entity is organized, i.e., in the United States, Denmark, or in a third

country. For example, income from sources in Denmark received by an entity organized under the laws of Denmark, which is treated for U.S. tax purposes as a corporation and is owned by a U.S. shareholder who is a U.S. resident for U.S. tax purposes, is not considered derived by the shareholder of that corporation even if, under the tax laws of the other State, the entity is treated as fiscally transparent. Rather, for purposes of the treaty, the income is treated as derived by an entity resident in Denmark. These results also follow regardless of whether the entity is disregarded as a separate entity under the laws of one jurisdiction but not the other, such as a single owner entity that is viewed as a branch for U.S. tax purposes and as a corporation for tax purposes of Denmark.

The taxation laws of a Contracting State may treat an item of income, profit or gain as income, profit or gain of a resident of that State even if, under the taxation laws of that State, the resident is not subject to tax on that particular item of income, profit or gain. For example, U.S.-source dividends would be regarded as income or gain of a resident of Denmark who otherwise derived the income or gain, despite the fact that the resident could be exempt from tax in Denmark on the dividend because of Denmark's participation exemption.

Where income is derived through an entity organized in a third state that has owners resident in one of the Contracting States, the characterization of the entity in that third state is irrelevant for purposes of determining whether the resident is entitled to treaty benefits with respect to income derived by the entity.

These principles also apply to trusts to the extent that they are fiscally transparent in either Contracting State. For example, if X, a resident of Denmark, creates a revocable trust and names persons resident in a third country as the beneficiaries of the trust, X would be treated as the beneficial owner of income derived from the United States under the Code's rules. If Denmark has no rules comparable to those in sections 671 through 679 then it is possible that under Denmark's law neither X nor the trust would be taxed on the income derived from the United States. In these cases subparagraph (d) provides that the trust's income would be regarded as being derived by a resident of the other Contracting State only to the extent that the laws of that State treat residents of that State as deriving the income for tax purposes.

## *Paragraph 2*

If, under the laws of the two Contracting States, and, thus, under paragraph 1, an individual is deemed to be a resident of both Contracting States, a series of tie-breaker rules are provided to determine a single State of residence for that individual. These tests are to be applied in the order in which they are stated. The first test is based on where the individual has a permanent home. If that test is inconclusive because the individual has a permanent home available to him in both States, he will be considered to be a resident of the Contracting State where his personal and economic relations are closest (i.e., the location of his "center of vital interests"). If that test is also inconclusive, or if he does not have a permanent home available to him in either State, he will be treated as a resident of the Contracting State where he maintains an habitual abode. If he has an habitual abode in both States or in neither of them, he will be treated as a resident of the State of which he is a national. If he is a national of both States or of neither, the competent authorities shall endeavor to settle the question by mutual agreement.

*Paragraph 3*

Paragraph 3 seeks to settle dual-residence issues for a person other than an individual. Such a person is treated as resident in the United States if it is created or organized under the laws of the United States or a political subdivision. Denmark employs two criteria to determine corporate residence, only one of which has to be satisfied in order for a corporate entity to be considered a resident of Denmark. The first is the same as the United States' "place-of-incorporation" rule. Alternatively, a corporation is also considered a resident of Denmark if its seat of management is located in Denmark. For this "seat-of-management" test, the location of the day-to-day management is normally decisive. Denmark's seat-of-management test coupled with the United States' rule could lead to cases of dual corporate residence, in the case of a company incorporated in the United States with its seat of management located in Denmark. Under paragraph 3, the residence of such a company will be considered by the competent authorities, who will endeavor to settle the question and to determine the mode of application of the Convention to such person.

*Paragraph 4*

Paragraph 4 provides that a U.S. citizen or alien lawfully admitted for permanent residence in the United States (i.e., a "green card" holder) will be treated as a resident of the United States for purposes of the Convention, and, thereby entitled to treaty benefits, only if he has a substantial presence (see section 7701(b)(3)), permanent home or habitual abode in the United States. If, however, such an individual is a resident both of the United States and Denmark under the general rule of paragraph 1, whether he is to be treated as a resident of the United States or of Denmark for purposes of the Convention is determined by the tie-breaker rules of paragraph 4 of the Article, regardless of how close his nexus to the United States may be. If, however, he is resident in the United States and not Denmark but has ties to a third State, in the absence of paragraph 4 he would always be a resident of the United States, no matter how tenuous his relationship with the United States relative to that with the third State. However, the fact that a U.S. citizen who does not have close ties to the United States may not be treated as a U.S. resident under the Convention does not alter the application of the saving clause of paragraph 4 of Article 1 (General Scope) to that citizen. For example, a U.S. citizen who pursuant to the "citizen/green card holder" rule is not considered to be a resident of the United States still is taxable on his worldwide income under the generally applicable rules of the Code.

## ARTICLE 5

Permanent Establishment

This Article defines the term "permanent establishment," a term that is significant for several articles of the Convention. The existence of a permanent establishment in a Contracting State is necessary under Article 7 (Business Profits) for the taxation by Denmark of the business profits of a resident of Denmark. Since the term "fixed base" in Article 14 (Independent Personal Services) is understood by reference to the definition of "permanent establishment," this Article is also relevant for purposes of Article 14. Articles 10, 11 and 12 (dealing with dividends, interest,

and royalties, respectively) provide for reduced rates of tax at source on payments of these items of income to a resident of the other State only when the income is not attributable to a permanent establishment or fixed base that the recipient has in the source State. The concept is also relevant in determining which Contracting State may tax certain gains under Article 13 (Capital Gains) and certain "other income" under Article 21 (Other Income).

#### *Paragraph 1*

The basic definition of the term "permanent establishment" is contained in paragraph 1. As used in the Convention, the term means a fixed place of business through which the business of an enterprise is wholly or partly carried on. As indicated in the OECD Commentaries (see paragraphs 4 through 8), a general principle to be observed in determining whether a permanent establishment exists is that the place of business must be "fixed" in the sense that a particular building or physical location is used by the enterprise for the conduct of its business, and that it must be foreseeable that the enterprise's use of this building or other physical location will be more than temporary.

#### *Paragraph 2*

Paragraph 2 lists a number of types of fixed places of business that constitute a permanent establishment. This list is illustrative and non-exclusive. According to paragraph 2, the term permanent establishment includes a place of management, a branch, an office, a factory, a workshop, and a mine, oil or gas well, quarry or other place of extraction of natural resources.

#### *Paragraph 3*

This paragraph provides rules to determine whether a building site or a construction, assembly or installation project, or an installation or drilling rig or ship used for the exploration of natural resources constitutes a permanent establishment for the contractor, driller, etc. An activity does not create a permanent establishment unless the site, project, etc. lasts or continues for more than twelve months. It is only necessary to refer to "exploration" and not "exploitation" in this context because exploitation activities are defined to constitute a permanent establishment under subparagraph (f) of paragraph 2. Thus, a drilling rig does not constitute a permanent establishment if a well is drilled in only six months, but if production begins in the following month the well becomes a permanent establishment as of the date on which production begins.

The twelve-month test applies separately to each site or project. The twelve-month period begins when work (including preparatory work carried on by the enterprise) physically begins in a Contracting State. A series of contracts or projects by a contractor that are interdependent both commercially and geographically are to be treated as a single project for purposes of applying the twelve-month threshold test. For example, the construction of a housing development would be considered as a single project even if each house were constructed for a different purchaser. Several drilling rigs operated by a drilling contractor in the same sector of the continental shelf also normally would be treated as a single project.

If the twelve-month threshold is exceeded, the site or project constitutes a permanent

establishment from the first day of activity. In applying this paragraph, time spent by a sub-contractor on a building site is counted as time spent by the general contractor at the site for purposes of determining whether the general contractor has a permanent establishment. However, for the sub-contractor itself to be treated as having a permanent establishment, the sub-contractor's activities at the site must last for more than 12 months. If a sub-contractor is on a site intermittently then, for purposes of applying the 12-month rule, time is measured from the first day the sub-contractor is on the site until the last day (i.e., intervening days that the sub-contractor is not on the site are counted).

The second sentence of paragraph 3, which includes subparagraphs (a) and (b), further provides that, for purposes of this paragraph, if a resident of a Contracting State is carrying on activities described in paragraph 3 in the other Contracting State and another person that is associated with the first mentioned resident is also carrying on activities that are substantially the same as those carried on by the last-mentioned enterprise and are concerned with the same project or operation, that other person's activities will be regarded as having been carried on by the first-mentioned resident. This rule does not apply to the extent that these activities are carried on at the same time. This rule is intended to prevent taxpayers from avoiding the time threshold by artificially splitting activities between different entities. Thus, the rule will not apply to the extent that the activities of the two persons are being carried on at the same time. If the principal and the related person each exceed the time threshold, both will be considered to have a permanent establishment. If the principal is present for, say, 11 months, and the related party is present for 2 months, during which time period the principal is not present, the principal will have a permanent establishment, but the related party will not.

These interpretations of the Article are based on the Commentary to paragraph 3 of Article 5 of the OECD Model, which contains language substantially the same as that in the Convention (except for the absence in the OECD Model of a rule for drilling rigs). These interpretations are consistent with the generally accepted international interpretation of the relevant language in paragraph 3 of Article 5 of the Convention.

Paragraph 5 of Article 8 (Shipping and Air Transport) confirms that the treatment of profits of an enterprise of a Contracting State from the transport by ships or aircraft of supplies or personnel to a location where offshore activities in connection with the operation or exploitation of natural resources are being carried on in the other Contracting State, or from the operation of tugboats and similar vessels in connection with such activities are taxable only in the Contracting State of the enterprise.

#### *Paragraph 4*

This paragraph contains exceptions to the general rule of paragraph 1, listing a number of activities that may be carried on through a fixed place of business, but which nevertheless do not create a permanent establishment. The use of facilities solely to store, display or deliver merchandise belonging to an enterprise does not constitute a permanent establishment of that enterprise. The maintenance of a stock of goods belonging to an enterprise solely for the purpose of storage, display or delivery, or solely for the purpose of processing by another enterprise does not give rise to a permanent establishment of the first-mentioned enterprise. The maintenance of a

fixed place of business solely for the purpose of purchasing goods or merchandise, or for collecting information, for the enterprise, or for other activities that have a preparatory or auxiliary character for the enterprise, such as advertising, or the supply of information do not constitute a permanent establishment of the enterprise. Thus, a news bureau of a newspaper would not constitute a permanent establishment of the newspaper.

Subparagraph 4(f) provides that a combination of the activities described in the other subparagraphs of paragraph 4 will not give rise to a permanent establishment if the combination results in an overall activity that is of a preparatory or auxiliary character. This combination rule, derived from the OECD Model, differs from that in the U.S. Model. In the U.S. Model, any combination of otherwise excepted activities is not deemed to give rise to a permanent establishment, without the additional requirement that the combination, as distinct from each constituent activity, be preparatory or auxiliary. It is assumed that if preparatory or auxiliary activities are combined, the combination generally will also be of a character that is preparatory or auxiliary. If, however, this is not the case, a permanent establishment may result from a combination of activities.

#### *Paragraphs 5 and 6*

Paragraphs 5 and 6 specify when activities carried on by an agent on behalf of an enterprise create a permanent establishment of that enterprise. Under paragraph 5, a dependent agent of an enterprise is deemed to be a permanent establishment of the enterprise if the agent has and habitually exercises an authority to conclude contracts in the name of the enterprise. If, however, the agent's activities are limited to those activities specified in paragraph 4 which would not constitute a permanent establishment if carried on by the enterprise through a fixed place of business, the agent is not a permanent establishment of the enterprise.

The Convention uses the OECD Model term "in the name of that enterprise," rather than the term "binding on the enterprise," which is the term used in the U.S. Model. There is no substantive difference. As indicated in paragraph 32 to the OECD Commentaries on Article 5, the application of paragraph 5 of the Article is not limited to "an agent who enters into contracts literally in the name of the enterprise; the paragraph applies equally to an agent who concludes contracts which are binding on the enterprise, even if those contracts are not actually in the name of the enterprise."

The contracts referred to in paragraph 5 are those relating to the essential business operations of the enterprise, rather than ancillary activities. For example, if the agent has no authority to conclude contracts in the name of the enterprise with its customers for, say, the sale of the goods produced by the enterprise, but it can enter into service contracts in the name of the enterprise for the enterprise's business equipment used in the agent's office, this contracting authority would not fall within the scope of the paragraph, even if exercised regularly.

Under paragraph 6, an enterprise is not deemed to have a permanent establishment in a Contracting State merely because it carries on business in the other Contracting State through an independent agent, including a broker or general commission agent, if the agent is acting in the ordinary course of his business as an independent agent. Thus, there are two conditions that must

be satisfied: the agent must be both legally and economically independent of the enterprise, and the agent must be acting in the ordinary course of its business in carrying out activities on behalf of the enterprise.

Whether the agent and the enterprise are independent is a factual determination. Among the questions to be considered are the extent to which the agent operates on the basis of instructions from the enterprise. An agent that is subject to detailed instructions regarding the conduct of its operations or comprehensive control by the enterprise is not legally independent.

In determining whether the agent is economically independent, a relevant factor is the extent to which the agent bears business risk. Business risk refers primarily to risk of loss. An independent agent typically bears risk of loss from its own activities. In the absence of other factors that would establish dependence, an agent that shares business risk with the enterprise, or has its own business risk, is economically independent because its business activities are not integrated with those of the principal. Conversely, an agent that bears little or no risk from the activities it performs is not economically independent and is not described in paragraph 6.

Another relevant factor in determining whether an agent is economically independent is whether the agent has an exclusive or nearly exclusive relationship with the principal. Such a relationship may indicate that the principal has economic control over the agent. A number of principals acting in concert also may have economic control over an agent. The limited scope of the agent's activities and the agent's dependence on a single source of income may indicate that the agent lacks economic independence. It should be borne in mind, however, that exclusivity is not in itself a conclusive test: an agent may be economically independent notwithstanding an exclusive relationship with the principal if it has the capacity to diversify and acquire other clients without substantial modifications to its current business and without substantial harm to its business profits. Thus, exclusivity should be viewed merely as a pointer to further investigation of the relationship between the principal and the agent. Each case must be addressed on the basis of its own facts and circumstances.

#### *Paragraph 7*

This paragraph clarifies that a company that is a resident of a Contracting State is not deemed to have a permanent establishment in Denmark merely because it controls, or is controlled by, a company that is a resident of that other Contracting State, or that carries on business in that other Contracting State. The determination whether a permanent establishment exists is made solely on the basis of the factors described in paragraphs 1 through 6 of the Article. Whether a company is a permanent establishment of a related company, therefore, is based solely on those factors and not on the ownership or control relationship between the companies.

## ARTICLE 6 Income from Real Property

#### *Paragraph 1*

Paragraph 1 states the general rule that income of a resident of a Contracting State derived from real property situated in the other Contracting State may be taxed in the Contracting State in which the property is situated. The paragraph specifies that income from real property includes income from agriculture and forestry. Income from agriculture and forestry are dealt with in Article 6 rather than in Article 7 (Business Profits) in order to conform the U.S. Model to the OECD Model. Given the availability of the net election in paragraph 5, taxpayers generally should be able to obtain the same tax treatment in the situs State regardless of whether the income is treated as business profits or real property income. Paragraph 3 clarifies that the income referred to in paragraph 1 also means income from any use of real property, including, but not limited to, income from direct use by the owner (in which case income may be imputed to the owner for tax purposes) and rental income from the letting of real property.

This Article does not grant an exclusive taxing right to the situs State; the situs State is merely given the primary right to tax. The Article does not impose any limitation in terms of rate or form of tax on the situs State, except that, as provided in paragraph 5, the situs State must allow the taxpayer an election to be taxed on a net basis.

#### *Paragraph 2*

The term "real property" is defined in paragraph 2 by reference to the internal law definition in the situs State. In the case of the United States, the term has the meaning given to it by Reg. § 1.897-1(b). In addition to the statutory definitions in the two Contracting States, the paragraph specifies certain additional classes of property that, regardless of internal law definitions, are to be included within the meaning of the term for purposes of the Convention. This expanded definition conforms to that in the OECD Model. The definition of "real property" for purposes of Article 6 is more limited than the expansive definition of "real property situated in the Other Contracting State" in paragraph 2 of Article 13 (Capital Gains). The Article 13 term includes not only immovable property as defined in Article 6 but certain other interests in real property.

#### *Paragraph 3*

Paragraph 3 makes clear that all forms of income derived from the exploitation of real property are taxable in the Contracting State in which the property is situated. In the case of a net lease of real property, if a net taxation election has not been made, the gross rental payment (before deductible expenses incurred by the lessee) is treated as income from the property. Income from the disposition of an interest in real property, however, is not considered "derived" from real property and is not dealt with in this Article. The taxation of that income is addressed in Article 13 (Capital Gains). Also, the interest paid on a mortgage on real property and distributions by a United States real estate investment trust are not dealt with in Article 6. Such payments would fall under Articles 10 (Dividends), 11 (Interest) or 13 (Capital Gains). Finally, dividends paid by a United States real property holding corporation are not considered to be income from the exploitation of real property: such payments would fall under Article 10 or 13.

#### *Paragraph 4*

Paragraph 4 specifies that the basic rule of paragraph 1 (as elaborated in paragraph 3) applies to income from real property of an enterprise and to income from real property used for the performance of independent personal services. This clarifies that the situs State may tax the real property income (including rental income) of a resident of the other Contracting State in the absence of attribution to a permanent establishment or fixed base in the situs State. This provision represents an exception to the general rule under Articles 7 (Business Profits) and 14 (Independent Personal Services) that income must be attributable to a permanent establishment or fixed base, respectively, in order to be taxable in the situs State.

*Paragraph 5*

Paragraph 5 provides that a resident of one Contracting State that derives real property income from the other may elect, for any taxable year, to be subject to tax in that other State on a net basis, as though the income were attributable to a permanent establishment in that other State. The election may be terminated with the consent of the competent authority of the situs State. In the United States, revocation will be granted in accordance with the provisions of Treas. Reg. section 1.871-10(d)(2).

ARTICLE 7  
Business Profits

This Article provides rules for the taxation by a Contracting State of the business profits of an enterprise of the other Contracting State.

*Paragraph 1*

Paragraph 1 states the general rule that business profits (as defined in paragraph 7) of an enterprise of one Contracting State may not be taxed by the other Contracting State unless the enterprise carries on business in that other Contracting State through a permanent establishment (as defined in Article 5 (Permanent Establishment)) situated there. When that condition is met, the State in which the permanent establishment is situated may tax the enterprise, but only on a net basis and only on the income that is attributable to the permanent establishment. This paragraph is identical to paragraph 1 of Article 7 of the OECD Model.

*Paragraph 2*

Paragraph 2 provides rules for the attribution of business profits to a permanent establishment. The Contracting States will attribute to a permanent establishment the profits that it would have earned had it been an independent enterprise engaged in the same or similar activities under the same or similar circumstances. This language incorporates the arm's length standard for purposes of determining the profits attributable to a permanent establishment. The computation of business profits attributable to a permanent establishment under this paragraph is subject to the rules of paragraph 3 for the allowance of expenses incurred for the purposes of earning the profits.

The “attributable to” concept of paragraph 2 is analogous but not entirely equivalent to the “effectively connected” concept in Code section 864(c). The profits attributable to a permanent establishment may be from sources within or without a Contracting State.

Paragraph 2 also provides that the business profits attributed to a permanent establishment include only those profits derived from that permanent establishment’s assets or activities. This rule is consistent with the “asset-use” and “business activities” test of Code section 864(c)(2).

This Article does not contain a provision corresponding to paragraph 4 of Article 7 of the OECD Model. That paragraph provides that a Contracting State in certain circumstances may determine the profits attributable to a permanent establishment on the basis of an apportionment of the total profits of the enterprise. Any such approach, however, must be designed to approximate an arm’s length result. This paragraph has not been included in the Convention because it is unnecessary. The U.S. view is that paragraphs 2 and 3 of Article 7 authorize the use of such approaches independently of paragraph 4 of Article 7 of the OECD Model because total profits methods are acceptable methods for determining the arm’s length profits of associated enterprises under Article 9 (Associated Enterprises). Accordingly, it is understood that, under paragraph 2 of this Article, it is permissible to use methods other than separate accounting to determine the arm’s length profits of a permanent establishment where it is necessary to do so for practical reasons, such as when the affairs of the permanent establishment are so closely bound up with those of the head office that it would be impossible to disentangle them on any strict basis of accounts. This view is confirmed by paragraph 3 of the Protocol, which states that nothing in Article 7 or in Article 24 (Non-Discrimination) prevents either of the Contracting States from applying their special rules dealing with the taxation of insurance companies. In the United States, the applicable rules are found in Code sections 842 (a) and (b).

### *Paragraph 3*

Paragraph 3 provides that in determining the business profits of a permanent establishment, deductions shall be allowed for the expenses incurred for the purposes of the permanent establishment, ensuring that business profits will be taxed on a net basis. This rule is not limited to expenses incurred exclusively for the purposes of the permanent establishment, but includes a reasonable allocation of expenses incurred for the purposes of the enterprise as a whole, or that part of the enterprise that includes the permanent establishment. Deductions are to be allowed regardless of which accounting unit of the enterprise books the expenses, so long as they are incurred for the purposes of the permanent establishment. For example, a portion of the interest expense recorded on the books of the home office in one State may be deducted by a permanent establishment in the other if properly allocable thereto.

The paragraph specifies that the expenses that may be considered to be incurred for the purposes of the permanent establishment are expenses for research and development, interest and other similar expenses, as well as a reasonable amount of executive and general administrative expenses. This rule permits (but does not require) each Contracting State to apply the type of expense allocation rules provided by U.S. law (such as in Treas. Reg. sections 1.861-8 and 1.882-5).

Paragraph 3 does not permit a deduction for expenses charged to a permanent establishment by another unit of the enterprise. Thus, a permanent establishment may not deduct a royalty deemed paid to the head office. Similarly, a permanent establishment may not increase its business profits by the amount of any notional fees for ancillary services performed for another unit of the enterprise, but also should not receive a deduction for the expense of providing such services, since those expenses would be incurred for purposes of a business unit other than the permanent establishment.

#### *Paragraph 4*

Paragraph 4 provides that no business profits can be attributed to a permanent establishment merely because it purchases goods or merchandise for the enterprise of which it is a part. This rule applies only to an office that performs functions for the enterprise in addition to purchasing. The income attribution issue does not arise if the sole activity of the permanent establishment is the purchase of goods or merchandise because such activity does not give rise to a permanent establishment under Article 5 (Permanent Establishment). A common situation in which paragraph 4 is relevant is one in which a permanent establishment purchases raw materials for the enterprise's manufacturing operation conducted outside the United States and sells the manufactured product. While business profits may be attributable to the permanent establishment with respect to its sales activities, no profits are attributable to it with respect to its purchasing activities.

#### *Paragraph 5*

Paragraph 5 provides that profits shall be determined by the same method each year, unless there is good reason to change the method used. This rule assures consistent tax treatment over time for permanent establishments. It limits the ability of both the Contracting State and the enterprise to change accounting methods to be applied to the permanent establishment. It does not, however, restrict a Contracting State from imposing additional requirements, such as the rules under Code section 481, to prevent amounts from being duplicated or omitted following a change in accounting method.

#### *Paragraph 6*

Paragraph 6 coordinates the provisions of Article 7 and other provisions of the Convention. Under this paragraph, when business profits include items of income that are dealt with separately under other articles of the Convention, the provisions of those articles will, except when they specifically provide to the contrary, take precedence over the provisions of Article 7. For example, the taxation of dividends will be determined by the rules of Article 10 (Dividends), and not by Article 7, except where, as provided in paragraph 6 of Article 10, the dividend is attributable to a permanent establishment or fixed base. In the latter case the provisions of Articles 7 or 14 (Independent Personal Services) apply. Thus, an enterprise of one State deriving dividends from the other State may not rely on Article 7 to exempt those dividends from tax at source if they are not attributable to a permanent establishment of the enterprise in the other State. By the same token, if the dividends are attributable to a permanent establishment in the other State, the dividends may be taxed on a net income basis at the source State's full corporate tax

rate, rather than on a gross basis under Article 10 (Dividends).

As provided in Article 8 (Shipping and Air Transport), income derived from shipping and air transport activities in international traffic described in that Article is taxable only in the country of residence of the enterprise regardless of whether it is attributable to a permanent establishment situated in the source State.

#### *Paragraph 7*

The term "business profits" is defined generally in paragraph 7 to mean income derived from any trade or business. In accordance with this broad definition, the term "business profits" includes income attributable to notional principal contracts and other financial instruments to the extent that the income is attributable to a trade or business of dealing in such instruments, or is otherwise related to a trade or business (as in the case of a notional principal contract entered into for the purpose of hedging currency risk arising from an active trade or business). Any other income derived from such instruments is, unless specifically covered in another article, dealt with under Article 21 (Other Income).

The paragraph states the longstanding U.S. view that income earned by an enterprise from the furnishing of personal services is business profits. Thus, a consulting firm resident in one State whose employees perform services in the other State through a permanent establishment may be taxed in that other State on a net basis under Article 7, and not under Article 14 (Independent Personal Services), which applies only to individuals or groups of individuals. The salaries of the employees would be subject to the rules of Article 15 (Dependent Personal Services).

The paragraph also specifies that the term "business profits" includes income derived by an enterprise from the rental of tangible personal property. The inclusion of income derived by an enterprise from the rental of tangible personal property in business profits means that such income earned by a resident of a Contracting State can be taxed by the other Contracting State only if the income is attributable to a permanent establishment maintained by the resident in that other State, and, if the income is taxable, it can be taxed only on a net basis. Income from the rental of tangible personal property that is not derived in connection with a trade or business is dealt with in Article 21 (Other Income).

#### *Paragraph 8*

Paragraph 8 incorporates into the Convention the rule of Code section 864(c)(6). Like the Code section on which it is based, paragraph 8 provides that any income or gain attributable to a permanent establishment or a fixed base during its existence is taxable in the Contracting State where the permanent establishment or fixed base is situated, even if the payment of that income or gain is deferred until after the permanent establishment or fixed base ceases to exist. This rule applies with respect to paragraphs 1 and 2 of Article 7 (Business Profits), paragraph 6 of Article 10 (Dividends), paragraph 3 of Articles 11 (Interest), 12 (Royalties) and 13 (Gains), Article 14 (Independent Personal Services) and paragraph 2 of Article 21 (Other Income).

The effect of this rule can be illustrated by the following example. Assume a company that is a resident of Denmark and that maintains a permanent establishment in the United States winds up the permanent establishment's business and sells the permanent establishment's inventory and assets to a U.S. buyer at the end of year 1 in exchange for an interest-bearing installment obligation payable in full at the end of year 3. Despite the fact that Article 13's threshold requirement for U.S. taxation is not met in year 3 because the company has no permanent establishment in the United States, the United States may tax the deferred income payment recognized by the company in year 3.

#### *Relation to Other Articles*

This Article is subject to the saving clause of paragraph 4 of Article 1 (General Scope) of the Model. Thus, if a citizen of the United States who is a resident of Denmark under the treaty derives business profits from the United States that are not attributable to a permanent establishment in the United States, the United States may, subject to the special foreign tax credit rules of paragraph 3 of Article 23 (Relief from Double Taxation), tax those profits, notwithstanding the provision of paragraph 1 of this Article which would exempt the income from U.S. tax.

The benefits of this Article are also subject to Article 22 (Limitation on Benefits). Thus, an enterprise of Denmark that derives income effectively connected with a U.S. trade or business may not claim the benefits of Article 7 unless the resident carrying on the enterprise qualifies for such benefits under Article 22.

### ARTICLE 8

#### Shipping And Air Transport

This Article governs the taxation of profits from the operation of ships and aircraft in international traffic. The term "international traffic" is defined in subparagraph 1(d) of Article 3 (General Definitions). The taxation of gains from the alienation of ships, aircraft or containers is not dealt with in this Article but in paragraph 4 of Article 13 (Gains).

#### *Paragraph 1*

Paragraph 1 provides that profits derived by an enterprise of a Contracting State from the operation in international traffic of ships or aircraft are taxable only in that Contracting State. Because paragraph 6 of Article 7 (Business Profits) defers to Article 8 with respect to shipping income, such income derived by a resident of one of the Contracting States may not be taxed in the other State even if the enterprise has a permanent establishment in that other State. Thus, if a U.S. airline has a ticket office in the other State, Denmark may not tax the airline's profits attributable to that office under Article 7. Since entities engaged in international transportation activities normally will have many permanent establishments in a number of countries, the rule avoids difficulties that would be encountered in attributing income to multiple permanent establishments if the income were covered by Article 7 (Business Profits).

*Paragraph 2*

The income from the operation of ships or aircraft in international traffic that is exempt from tax under paragraph 1 is defined in paragraph 2.

In addition to income derived directly from the operation of ships and aircraft in international traffic, this definition also includes certain items of rental income that are closely related to those activities. First, income of an enterprise of a Contracting State from the rental of ships or aircraft on a full basis (i.e., with crew) when such ships or aircraft are used in international traffic is income of the lessor from the operation of ships and aircraft in international traffic and, therefore, is exempt from tax in the other Contracting State under paragraph 1. Also, paragraph 2 encompasses income from the lease of ships or aircraft on a bareboat basis (i.e., without crew), either when the ships or aircraft are operated in international traffic by the lessee, or when the income is incidental to other income of the lessor from the operation of ships or aircraft in international traffic. The scope of Article 8 is thus the same as the U.S. Model, but broader than that of the OECD Model as it covers rentals from bareboat leasing that are not incidental to the operation of ships or aircraft by the resident itself.

Paragraph 2 also clarifies, consistent with the Commentary to Article 8 of the OECD Model, that income earned by an enterprise from the inland transport of property or passengers within either Contracting State falls within Article 8 if the transport is undertaken as part of the international transport of property or passengers by the enterprise. Thus, if a U.S. shipping company contracts to carry property from Denmark to a U.S. city and, as part of that contract, it transports the property by truck from its point of origin to an airport in Denmark (or it contracts with a trucking company to carry the property to the airport) the income earned by the U.S. shipping company from the overland leg of the journey would be taxable only in the United States. Similarly, Article 8 also would apply to income from lighterage undertaken as part of the international transport of goods.

Finally, certain non-transport activities that are an integral part of the services performed by a transport company are understood to be covered in paragraph 1, though they are not specified in paragraph 2. These include, for example, the performance of some maintenance or catering services by one airline for another airline, if these services are incidental to the provision of those services by the airline for itself. Income earned by concessionaires, however, is not covered by Article 8.

*Paragraph 3*

Under this paragraph, profits of an enterprise of a Contracting State from the use, maintenance or rental of containers (including equipment for their transport) that are used for the transport of goods in international traffic are exempt from tax in the other Contracting State. This result obtains under paragraph 3 regardless of whether the recipient of the income is engaged in the operation of ships or aircraft in international traffic, and regardless of whether the enterprise has a permanent establishment in the other Contracting State. By contrast, Article 8 of the OECD Model covers only income from the use, maintenance or rental of containers that is incidental to other income from international traffic.

#### *Paragraph 4*

This paragraph clarifies that the provisions of paragraphs 1 and 3 also apply to profits derived by an enterprise of a Contracting State from participation in a consortium, pool, joint business or international operating agency. This refers to various arrangements for international cooperation by carriers in shipping and air transport. For example, airlines from two countries may agree to share the transport of passengers between the two countries. They each will fly the same number of flights per week and share the revenues from that route equally, regardless of the number of passengers that each airline actually transports. Paragraph 4 makes clear that with respect to each carrier the income dealt with in the Article is that carrier's share of the total transport, not the income derived from the passengers actually carried by the airline.

According to paragraph 1 of the Protocol, the Scandinavian Airlines System (SAS) is a consortium within the meaning of Article 8, its participating members being SAS Danmark A/S, SAS Norge ASA and SAS Sverige AB. Thus, the income share of SAS Danmark A/S from the participation in SAS is subject to the provisions of Article 8 in accordance with paragraphs 1, 3 and 5.

#### *Paragraph 5*

This paragraph clarifies that, notwithstanding the provisions of paragraph 2(f) and paragraph 3 of Article 5 (Permanent Establishment), the profits of an enterprise of a Contracting State from the transport by ships or aircraft of supplies or personnel to a location where offshore activities in connection with the exploration or exploitation of natural resources are being carried on in the other Contracting State, or from the operation of tugboats and similar vessels in connection with such activities, shall be taxable only in the first-mentioned State. This clarification is similar to a clarification as to the tax treatment of these activities in the Danish Model Income Tax Treaty.

#### *Relation to Other Articles*

As with other benefits of the Convention, the benefit of exclusive residence country taxation under Article 8 is available to an enterprise only if it is entitled to benefits under Article 22 (Limitation on Benefits).

This Article also is subject to the saving clause of paragraph 4 of Article 1 (General Scope). Thus, if a citizen of the United States who is a resident of Denmark derives profits from the operation of ships or aircraft in international traffic, notwithstanding the exclusive residence country taxation in paragraph 1 of Article 8, the United States may, subject to the special foreign tax credit rules of paragraph 2 of Article 23 (Relief from Double Taxation), tax those profits as part of the worldwide income of the citizen. (This is an unlikely situation, however, because non-tax considerations (e.g., insurance) generally result in shipping activities being carried on in corporate form.)

## ARTICLE 9

### Associated Enterprises

This Article incorporates in the Convention the arm's length principle reflected in the U.S. domestic transfer pricing provisions, particularly Code section 482. It provides that when related enterprises engage in a transaction on terms that are not arm's length, the Contracting States may make appropriate adjustments to the taxable income and tax liability of such related enterprises to reflect what the income and tax of these enterprises with respect to the transaction would have been had there been an arm's length relationship between them.

#### *Paragraph 1*

This paragraph addresses the situation where an enterprise of a Contracting State is related to an enterprise of the other Contracting State, and there are arrangements or conditions imposed between the enterprises in their commercial or financial relations that are different from those that would have existed in the absence of the relationship. Under these circumstances, the Contracting States may adjust the income (or loss) of the enterprise to reflect what it would have been in the absence of such a relationship.

The paragraph identifies the relationships between enterprises that serve as a prerequisite to application of the Article. The necessary element in these relationships is effective control, which is also the standard for purposes of section 482. Thus, the Article applies if an enterprise of one State participates directly or indirectly in the management, control, or capital of the enterprise of the other State. Also, the Article applies if any third person or persons participate directly or indirectly in the management, control, or capital of enterprises of different States. For this purpose, all types of control are included, i.e., whether or not legally enforceable and however exercised or exercisable.

The fact that a transaction is entered into between such related enterprises does not, in and of itself, mean that a Contracting State may adjust the income (or loss) of one or both of the enterprises under the provisions of this Article. If the conditions of the transaction are consistent with those that would be made between independent persons, the income arising from that transaction should not be subject to adjustment under this Article.

Similarly, the fact that associated enterprises may have concluded arrangements, such as cost sharing arrangements or general services agreements, is not in itself an indication that the two enterprises have entered into a non-arm's length transaction that should give rise to an adjustment under paragraph 1. Both related and unrelated parties enter into such arrangements (e.g., joint venturers may share some development costs). As with any other kind of transaction, when related parties enter into an arrangement, the specific arrangement must be examined to see whether or not it meets the arm's length standard. In the event that it does not, an appropriate adjustment may be made, which may include modifying the terms of the agreement or recharacterizing the transaction to reflect its substance.

It is understood that the "commensurate with income" standard for determining appropriate transfer prices for intangibles, added to Code section 482 by the Tax Reform Act of

1986, was designed to operate consistently with the arm's-length standard. The implementation of this standard in the section 482 regulations is in accordance with the general principles of paragraph 1 of Article 9 of the Convention, as interpreted by the OECD Transfer Pricing Guidelines.

The Contracting States preserve their rights to apply internal law provisions relating to adjustments between related parties. They also reserve the right to make adjustments in cases involving tax evasion or fraud. Such adjustments -- the distribution, apportionment, or allocation of income, deductions, credits or allowances -- are permitted even if they are different from, or go beyond, those authorized by paragraph 1 of the Article, as long as they accord with the general principles of paragraph 1, i.e., that the adjustment reflects what would have transpired had the related parties been acting at arm's length. For example, while paragraph 1 explicitly allows adjustments of deductions in computing taxable income, it does not deal with adjustments to tax credits. It does not, however, preclude such adjustments if they can be made under internal law.

This Article also permits tax authorities to deal with thin capitalization issues. They may, in the context of Article 9, scrutinize more than the rate of interest charged on a loan between related persons. They also may examine the capital structure of an enterprise, whether a payment in respect of that loan should be treated as interest, and, if it is treated as interest, under what circumstances interest deductions should be allowed to the payor. Paragraph 2 of the Commentary to Article 9 of the OECD Model, together with the U.S. observation set forth in Paragraph 15 thereof, sets forth a similar understanding of the scope of Article 9 in the context of thin capitalization.

#### *Paragraph 2*

When a Contracting State has made an adjustment that is consistent with the provisions of paragraph 1, and the other Contracting State agrees that the adjustment was appropriate to reflect arm's-length conditions, that other Contracting State is obligated to make a correlative adjustment (sometimes referred to as a "corresponding adjustment") to the tax liability of the related person in that other Contracting State.

Article 9 leaves the treatment of "secondary adjustments" to the laws of the Contracting States. When an adjustment under Article 9 has been made, one of the parties will have in its possession funds that it would not have had at arm's length. The question arises as to how to treat these funds. In the United States the general practice is to treat such funds as a dividend or contribution to capital, depending on the relationship between the parties. Under certain circumstances, the parties may be permitted to restore the funds to the party that would have the funds at arm's length, and to establish an account payable pending restoration of the funds. See Rev. Proc. 65-17, 1965-1 C.B. 833.

The Contracting State making a secondary adjustment will take the other provisions of the Convention, where relevant, into account. For example, if the effect of a secondary adjustment is to treat a U.S. corporation as having made a distribution of profits to its parent corporation in Denmark, the provisions of Article 10 (Dividends) will apply, and the United States may impose a 5 percent withholding tax on the dividend. Also, if under Article 23 (Relief from Double

Taxation) the other State generally gives a credit for taxes paid with respect to such dividends, it would also be required to do so in this case.

The competent authorities are authorized by paragraph 2 to consult, if necessary, to resolve any differences in the application of these provisions. For example, there may be a disagreement over whether an adjustment made by a Contracting State under paragraph 1 was appropriate.

If a correlative adjustment is made under paragraph 2, it is to be implemented, pursuant to paragraph 2 of Article 25 (Mutual Agreement Procedure), notwithstanding any time limits or other procedural limitations in the law of the Contracting State making the adjustment. If a taxpayer has entered a closing agreement (or other written settlement) with the United States prior to bringing a case to the competent authorities, the U.S. competent authority will endeavor only to obtain a correlative adjustment from Denmark. See Rev. Proc. 96-13, 1996-13 I.R.B. 31, Section 7.05.

#### *Relationship to Other Articles*

The saving clause of paragraph 4 of Article 1 (General Scope) does not apply to paragraph 2 of Article 9 by virtue of the exceptions to the saving clause in paragraph 5(a) of Article 1. Thus, even if the statute of limitations has run, a refund of tax can be made in order to implement a correlative adjustment. Statutory or procedural limitations, however, cannot be overridden to impose additional tax, because paragraph 2 of Article 1 provides that the Convention cannot restrict any statutory benefit.

### ARTICLE 10 Dividends

Article 10 provides rules for the taxation of dividends paid by a resident of one Contracting State to a beneficial owner that is a resident of the other Contracting State. The article provides for full residence country taxation of such dividends and a limited source-State right to tax. Article 10 also provides rules for the imposition of a tax on branch profits by the State of source. Finally, the article prohibits a Contracting State from imposing a tax on dividends paid by companies resident in the other Contracting State and from imposing taxes, other than a branch profits tax, on undistributed earnings.

#### *Paragraph 1*

The right of a shareholder's country of residence to tax dividends arising in the source country is preserved by paragraph 1, which permits a Contracting State to tax its residents on dividends paid to them by a resident of the other Contracting State. For dividends from any other source paid to a resident, Article 21 (Other Income) grants the residence country exclusive taxing jurisdiction (other than for dividends attributable to a permanent establishment or fixed base in the other State).

*Paragraph 2*

The State of source may also tax dividends beneficially owned by a resident of the other State, subject to the limitations in paragraph 2. Generally, the source State's tax is limited to 15 percent of the gross amount of the dividend paid. If, however, the beneficial owner of the dividends is a company resident in the other State that holds at least 10 percent of the voting shares of the company paying the dividend, then the source State's tax is limited to 5 percent of the gross amount of the dividend. Indirect ownership of voting shares (through tiers of corporations) and direct ownership of non-voting shares are not taken into account for purposes of determining eligibility for the 5 percent direct dividend rate. Shares are considered voting shares if they provide the power to elect, appoint or replace any person vested with the powers ordinarily exercised by the board of directors of a U.S. corporation.

The benefits of paragraph 2 may be granted at the time of payment by means of reduced withholding at source. It also is consistent with the paragraph for tax to be withheld at the time of payment at full statutory rates, and the treaty benefit to be granted by means of a subsequent refund so long as such procedures are applied in a reasonable manner.

Paragraph 2 does not affect the taxation of the profits out of which the dividends are paid. The taxation by a Contracting State of the income of its resident companies is governed by the internal law of the Contracting State, subject to the provisions of paragraph 4 of Article 24 (Non-Discrimination).

The term "beneficial owner" is not defined in the Convention, and is, therefore, defined as under the internal law of the country imposing tax (i.e., the source country). The beneficial owner of the dividend for purposes of Article 10 is the person to which the dividend income is attributable for tax purposes under the laws of the source State. Thus, if a dividend paid by a corporation that is a resident of one of the States (as determined under Article 4 (Residence)) is received by a nominee or agent that is a resident of the other State on behalf of a person that is not a resident of that other State, the dividend is not entitled to the benefits of this Article. However, a dividend received by a nominee on behalf of a resident of that other State would be entitled to benefits. These limitations are confirmed by paragraph 12 of the OECD Commentaries to Article 10. See also, paragraph 24 of the OECD Commentaries to Article 1 (General Scope).

Companies holding shares through fiscally transparent entities such as partnerships are considered for purposes of this paragraph to hold their proportionate interest in the shares held by the intermediate entity. As a result, companies holding shares through such entities may be able to claim the benefits of subparagraph (a) under certain circumstances. The lower rate applies when the company's proportionate share of the shares held by the intermediate entity meets the 10 percent voting stock threshold. Whether this ownership threshold is satisfied may be difficult to determine and often will require an analysis of the partnership or trust agreement.

*Paragraph 3*

Paragraph 3 provides rules that modify the maximum rates of tax at source provided in paragraph 2 in particular cases. The first sentence of paragraph 3 denies the lower direct

investment withholding rate of paragraph 2(a) for dividends paid by a U.S. Regulated Investment Company (RIC) or a U.S. Real Estate Investment Trust (REIT). The second sentence states that dividends paid by a RIC will qualify for the 15 percent rate provided by subparagraph 2(b).

The third sentence denies the benefits of both subparagraphs (a) and (b) of paragraph 2 to dividends paid by REITs in certain circumstances, allowing them to be taxed at the U.S. statutory rate (30 percent). The United States limits the source tax on dividends paid by a REIT to the 15 percent rate only when the beneficial owner of the dividend satisfies one or more of three criteria. First, the dividend may qualify if the beneficial owner is an individual resident of the other State who owns a not more than 10 percent interest in the REIT. Second, the dividend may qualify for the 15% rate if it is paid with respect to a class of stock that is publicly traded and the beneficial owner of the dividends is a person holding an interest of not more than 5 percent of any class of the REIT's stock. Finally, the dividend may qualify for the 15 percent rate if the beneficial owner of the dividend is a person holding an interest of not more than 10 percent of the REIT and the REIT is diversified.

For this purpose, a REIT will be considered diversified if the value of no single interest in the REIT's real property exceeds 10 percent of the REIT's total interests in real property. For purposes of this rule, foreclosure property and mortgages will not be considered an interest in real property unless, in the case of a mortgage, it has substantial equity components. With respect to partnership interests held by a REIT, the REIT will be treated as owning directly the interests in real property held by the partnership.

The denial of the 5 percent withholding rate at source to all RIC and REIT shareholders, and the denial of the 15 percent rate to REIT shareholders that do not meet one of the 3 tests described above, is intended to prevent the use of these entities to gain unjustifiable source taxation benefits for certain shareholders resident in the other Contracting State. For example, a corporation resident in Denmark that wishes to hold a diversified portfolio of U.S. corporate shares may hold the portfolio directly and pay a U.S. withholding tax of 15 percent on all of the dividends that it receives. Alternatively, it may acquire a diversified portfolio by purchasing a 10 percent or more of the interests in a RIC. Since the RIC may be a pure conduit, there may be no U.S. tax costs to interposing the RIC in the chain of ownership. Absent the special rule in paragraph 3, such use of the RIC could transform portfolio dividends, taxable in the United States under the Convention at 15 percent, into direct investment dividends taxable only at 5 percent.

Similarly, a resident of Denmark directly holding U.S. real property would pay U.S. tax either at a 30 percent rate on the gross income or at graduated rates on the net income. As in the preceding example, by placing the real property in a REIT, the investor could transform real estate income into dividend income, taxable at the rates provided in Article 10, significantly reducing the U.S. tax that otherwise would be imposed. This policy avoids a disparity between the taxation of direct real estate investments and real estate investments made through REIT conduits. In the cases covered by the exceptions, the holding in the REIT is not considered the equivalent of a direct holding in the underlying real property.

#### *Paragraph 4*

Exemption from tax in the state of source is provided for dividends paid to qualified governmental entities. The exemption of paragraph 4 is analogous to that provided to foreign governments under section 892 of the Code. Paragraph 4 makes that exemption reciprocal. A qualified governmental entity is defined in paragraph 1(i) of Article 3 (General Definitions). The definition does not include a governmental entity that carries on commercial activity. Further, a dividend paid by a company engaged in commercial activity that is controlled (within the meaning of Treas. Reg. section 1.892-5T) by a qualified governmental entity that is the beneficial owner of the dividend is not exempt at source under paragraph 4 because ownership of a controlled company is viewed as a substitute for carrying on a business directly.

#### *Paragraph 5*

Paragraph 5 defines the term dividends broadly and flexibly. The definition is intended to cover all arrangements that yield a return on an equity investment in a corporation as determined under the tax law of the state of source, as well as arrangements that might be developed in the future.

The term “dividends” includes income from shares, or other corporate rights that are not treated as debt under the law of the source State, that participate in the profits of the company. The term also includes income that is subject to the same tax treatment as income from shares by the law of the State of source. Thus, a constructive dividend that results from a non-arm's length transaction between a corporation and a related party is a dividend. In the case of the United States the term dividend includes amounts treated as a dividend under U.S. law upon the sale or redemption of shares or upon a transfer of shares in a reorganization. See, e.g., Rev. Rul. 92-85, 1992-2 C.B. 69 (sale of foreign subsidiary's stock to U.S. sister company is a deemed dividend to extent of subsidiary's and sister's earnings and profits). Further, a distribution from a U.S. publicly traded limited partnership, which is taxed as a corporation under U.S. law, is a dividend for purposes of Article 10. However, a distribution by a limited liability company is not characterized by the United States as a dividend and therefore is not a dividend for purposes of Article 10, provided the limited liability company is not characterized as an association taxable as a corporation under U.S. law. Finally, a payment denominated as interest that is made by a thinly capitalized corporation may be treated as a dividend to the extent that the debt is re-characterized as equity under the laws of the source State.

#### *Paragraph 6*

Paragraph 6 excludes from the general source country limitations under paragraph 2 dividends paid with respect to holdings that form part of the business property of a permanent establishment or a fixed base. Such dividends will be taxed on a net basis using the rates and rules of taxation generally applicable to residents of the State in which the permanent establishment or fixed base is located, as modified by the Convention. An example of dividends paid with respect to the business property of a permanent establishment would be dividends derived by a dealer in stock or securities from stock or securities that the dealer held for sale to customers.

In the case of a permanent establishment or fixed base that once existed in the State but that no longer exists, the provisions of paragraph 6 also apply, by virtue of paragraph 8 of Article

7 (Business Profits), to dividends that would be attributable to such a permanent establishment or fixed base if it did exist in the year of payment or accrual. See the Technical Explanation of paragraph 8 of Article 7.

*Paragraph 7*

A State's right to tax dividends paid by a company that is a resident of the other State is restricted by paragraph 7 to cases in which the dividends are paid to a resident of that State or are attributable to a permanent establishment or fixed base in that State. Thus, a State may not impose a "secondary" withholding tax on dividends paid by a nonresident company out of earnings and profits from that State. In the case of the United States, paragraph 7, therefore, overrides the ability to impose taxes under sections 871 and 882(a) on dividends paid by foreign corporations that have a U.S. source under section 861(a)(2)(B).

The paragraph also restricts a State's right to impose corporate level taxes on undistributed profits, other than a branch profits tax. The accumulated earnings tax and the personal holding company taxes are taxes covered in Article 2 (Covered Taxes). Accordingly, under the provisions of Article 7 (Business Profits), the United States may not impose those taxes on the income of a resident of the other State except to the extent that income is attributable to a permanent establishment in the United States. Paragraph 7 also confirms the denial of the U.S. authority to impose those taxes. The paragraph does not restrict a State's right to tax its resident shareholders on undistributed earnings of a corporation resident in the other State. Thus, the U.S. authority to impose the foreign personal holding company tax, its taxes on subpart F income and on an increase in earnings invested in U.S. property, and its tax on income of a passive foreign investment company that is a qualified electing fund is in no way restricted by this provision.

*Paragraph 8*

Paragraph 8 permits a State to impose a branch profits tax on a corporation resident in the other State. The tax is in addition to other taxes permitted by the Convention. Since the term "corporation" is not defined in the Convention, it will be defined for this purpose under the law of the first-mentioned (i.e., source) State.

A State may impose a branch profits tax on a corporation if the corporation has income attributable to a permanent establishment in that State, derives income from real property in that State that is taxed on a net basis under Article 6, or realizes gains taxable in that State under paragraph 1 of Article 13. The tax is limited, however, to the aforementioned items of income that are included in the "dividend equivalent amount."

Paragraph 8 permits the United States generally to impose its branch profits tax on a corporation resident in the other State to the extent of the corporation's

- (i) business profits that are attributable to a permanent establishment in the United States
- (ii) income that is subject to taxation on a net basis because the corporation has elected under section 882(d) of the Code to treat income from real property not otherwise taxed on a net basis as effectively connected income and

(iii) gain from the disposition of a United States real property interest, other than an interest in a United States real property holding corporation.

The United States may not impose its branch profits tax on the business profits of a corporation resident in Denmark that are effectively connected with a U.S. trade or business but that are not attributable to a permanent establishment and are not otherwise subject to U.S. taxation under Article 6 (Income from Real Property) or paragraph 1 of Article 13 (Capital Gains).

The term "dividend equivalent amount" used in paragraph 8 has the same meaning that it has under section 884 of the Code, as amended from time to time, provided the amendments are consistent with the purpose of the branch profits tax. Generally, the dividend equivalent amount for a particular year is the income described above that is included in the corporation's effectively connected earnings and profits for that year, after payment of the corporate tax under Articles 6, 7 or 13, reduced for any increase in the branch's U.S. net equity during the year or increased for any reduction in its U.S. net equity during the year. U.S. net equity is U.S. assets less U.S. liabilities. See Treas. Reg. section 1.884-1. The dividend equivalent amount for any year approximates the dividend that a U.S. branch office would have paid during the year if the branch had been operated as a separate U.S. subsidiary company. If in the future Denmark were to impose a branch profits tax, the base of its tax is limited to an amount that is analogous to the dividend equivalent amount.

#### *Paragraph 9*

Paragraph 9 provides that the branch profits tax permitted by paragraph 8 shall not be imposed at a rate exceeding the direct investment dividend withholding rate of five percent specified in subparagraph 2(a).

#### *Relation to Other Articles*

Notwithstanding the foregoing limitations on source country taxation of dividends, the saving clause of paragraph 4 of Article 1 permits the United States to tax dividends received by its residents and citizens, subject to the special foreign tax credit rules of paragraph 3 of Article 23 (Relief from Double Taxation), as if the Convention had not come into effect.

The benefits of this Article are also subject to the provisions of Article 22 (Limitation on Benefits). Thus, if a resident of Denmark is the beneficial owner of dividends paid by a U.S. corporation, the shareholder must qualify for treaty benefits under at least one of the tests of Article 22 in order to receive the benefits of this Article.

## ARTICLE 11

### Interest

Article 11 specifies the taxing jurisdiction over interest income of the States of source and residence and defines the terms necessary to apply the article.

*Paragraph 1*

This paragraph grants to the State of residence the exclusive right, subject to exceptions provided in paragraphs 3 and 5, to tax interest beneficially owned by its residents and arising in the other Contracting State. The term "beneficial owner" is not defined in the Convention, and is, therefore, defined as under the internal law of the country imposing tax (i.e., the source country). The beneficial owner of the interest for purposes of Article 11 is the person to which the interest income is attributable for tax purposes under the laws of the source State. Thus, if interest arising in a Contracting State is received by a nominee or agent that is a resident of the other State on behalf of a person that is not a resident of that other State, the interest is not entitled to the benefits of this Article. However, interest received by a nominee on behalf of a resident of that other State would be entitled to benefits. These limitations are confirmed by paragraph 8 of the OECD Commentaries to Article 11. See also paragraph 24 of the OECD Commentaries to Article 1 (General Scope).

*Paragraph 2*

The term "interest" as used in Article 11 is defined in paragraph 2 to include, inter alia, income from debt claims of every kind, whether or not secured by a mortgage. Penalty charges for late payment are excluded from the definition of interest. Interest that is paid or accrued subject to a contingency is within the ambit of Article 11. This includes income from a debt obligation carrying the right to participate in profits. The term does not, however, include amounts that are treated as dividends under Article 10 (Dividends).

The term interest also includes amounts subject to the same tax treatment as income from money lent under the law of the State in which the income arises. Thus, amounts that the United States will treat as interest include

- (i) the difference between the issue price and the stated redemption price at maturity of a debt instrument, i.e., original issue discount (OID), which may be wholly or partially realized on the disposition of a debt instrument (section 1273),
- (ii) amounts that are imputed interest on a deferred sales contract (section 483),
- (iii) amounts treated as interest or OID under the stripped bond rules (section 1286),
- (iv) amounts treated as original issue discount under the below-market interest rate rules (section 7872),
- (v) a partner's distributive share of a partnership's interest income (section 702),
- (vi) the interest portion of periodic payments made under a "finance lease" or similar contractual arrangement that in substance is a borrowing by the nominal lessee to finance the acquisition of property,
- (vii) amounts included in the income of a holder of a residual interest in a REMIC (section 860E), because these amounts generally are subject to the same taxation treatment as interest under U.S. tax law, and
- (viii) embedded interest with respect to notional principal contracts.

*Paragraph 3*

Paragraph 3 provides an exception to the exclusive residence taxation rule of paragraph 1 in cases where the beneficial owner of the interest carries on business through a permanent establishment in the State of source or performs independent personal services from a fixed base situated in that State and the interest is attributable to that permanent establishment or fixed base. In such cases the provisions of Article 7 (Business Profits) or Article 14 (Independent Personal Services) will apply and the State of source will retain the right to impose tax on such interest income on a net basis.

In the case of a permanent establishment or fixed base that once existed in the State but that no longer exists, the provisions of paragraph 3 also apply, by virtue of paragraph 8 of Article 7 (Business Profits), to interest that would be attributable to such a permanent establishment or fixed base if it did exist in the year of payment or accrual. See the Technical Explanation of paragraph 8 of Article 7.

#### *Paragraph 4*

Paragraph 4 provides that in cases involving special relationships between persons, Article 11 applies only to that portion of the total interest payments that would have been made absent such special relationships (i.e., an arm's length interest payment). Any excess amount of interest paid remains taxable according to the laws of the United States and Denmark, respectively, with due regard to the other provisions of the Convention. Thus, if the excess amount would be treated under the source country's law as a distribution of profits by a corporation, such amount could be taxed as a dividend rather than as interest, but the tax would be subject, if appropriate, to the rate limitations of paragraph 2 of Article 10 (Dividends).

The term "special relationship" is not defined in the Convention. In applying this paragraph the United States considers the term to include the relationships described in Article 9, which in turn correspond to the definition of "control" for purposes of section 482 of the Code.

This paragraph does not address cases where, owing to a special relationship between the payer and the beneficial owner or between both of them and some other person, the amount of the interest is less than an arm's length amount. In those cases a transaction may be characterized to reflect its substance and interest may be imputed consistent with the definition of interest in paragraph 2. Consistent with Article 9 (Associated Enterprises), the United States would apply section 482 or 7872 of the Code to determine the amount of imputed interest in those cases.

#### *Paragraph 5*

Paragraph 5 provides anti-abuse exceptions to the source-country exemption in paragraph 1 for two classes of interest payments.

The first exception, in subparagraph (a) of paragraph 5, deals with so-called "contingent interest." Under this provision interest arising in one of the Contracting States that is determined by reference to the receipts, sales, income, profits or other cash flow of the debtor or a related person, to any change in the value of any property of the debtor or a related person or to any

dividend, partnership distribution or similar payment made by the debtor to a related person also may be taxed in the Contracting State in which it arises, and according to the laws of that State, but if the beneficial owner is a resident of the other Contracting State, the gross amount of the interest may be taxed at a rate not exceeding the rate prescribed in subparagraph (b) of paragraph 2 of Article 10 (Dividends).

The second exception, in subparagraph (b) of paragraph 5, is consistent with the policy of Code sections 860E(e) and 860G(b) that excess inclusions with respect to a real estate mortgage investment conduit (REMIC) should bear full U.S. tax in all cases. Without a full tax at source foreign purchasers of residual interests would have a competitive advantage over U.S. purchasers at the time these interests are initially offered. Also, absent this rule the U.S. FISC would suffer a revenue loss with respect to mortgages held in a REMIC because of opportunities for tax avoidance created by differences in the timing of taxable and economic income produced by these interests.

#### *Relation to Other Articles*

Notwithstanding the foregoing limitations on source country taxation of interest, the saving clause of paragraph 4 of Article 1 permits the United States to tax its residents and citizens, subject to the special foreign tax credit rules of paragraph 3 of Article 23 (Relief from Double Taxation), as if the Convention had not come into force.

As with other benefits of the Convention, the benefits of exclusive residence State taxation of interest under paragraph 1 or limited source taxation under paragraph 5(b) of this Article are available to a resident of the other State only if that resident is entitled to those benefits under the provisions of Article 22 (Limitation on Benefits).

## ARTICLE 12

### Royalties

Article 12 specifies the taxing jurisdiction over royalties of the States of residence and source and defines the terms necessary to apply the article.

#### *Paragraph 1*

Paragraph 1 grants to the State of residence the exclusive right, subject to the exception in paragraph 3, to tax royalties beneficially owned by its residents and arising in the other Contracting State.

The term "beneficial owner" is not defined in the Convention, and is, therefore, defined as under the internal law of the country imposing tax (i.e., the source country). The beneficial owner of the royalty for purposes of Article 12 is the person to which the royalty income is attributable for tax purposes under the laws of the source State. Thus, if a royalty arising in a Contracting State is received by a nominee or agent that is a resident of the other State on behalf of a person that is not a resident of that other State, the royalty is not entitled to the benefits of this Article.

However, a royalty received by a nominee on behalf of a resident of that other State would be entitled to benefits. These limitations are confirmed by paragraph 4 of the OECD Commentaries to Article 12. See also paragraph 24 of the OECD Commentaries to Article 1 (General Scope).

### *Paragraph 2*

Paragraph 2 defines the term "royalties" as used in this Article to include payments of any kind received as a consideration for the use of, or the right to use, any copyright of a literary, artistic, scientific or other work; for the use of, or the right to use, any patent, trademark, design or model, plan, secret formula or process, or other like right or property; or for information concerning industrial, commercial, or scientific experience. It does not include income from leasing personal property.

The term royalties is defined in the Convention and therefore is generally independent of domestic law. Certain terms used in the definition are not defined in the Convention, but these may be defined under domestic tax law. For example, the term "secret process or formulas" is found in the U.S. Internal Revenue Code, and its meaning has been elaborated in the context of sections 351 and 367. See Rev. Rul. 55-17, 1955-1 C.B. 388; Rev. Rul. 64-56, 1964-1 C.B. 133; Rev. Proc. 69-19, 1969-2 C.B. 301.

Consideration for the use or right to use cinematographic films, or works on film, tape, or other means of reproduction in radio or television broadcasting is specifically included in the definition of royalties. It is intended that subsequent technological advances in the field of radio and television broadcasting will not affect the inclusion of payments relating to the use of such means of reproduction in the definition of royalties.

If an artist who is resident in one Contracting State records a performance in the other Contracting State, retains a copyrighted interest in a recording, and receives payments for the right to use the recording based on the sale or public playing of the recording, then the right of such other Contracting State to tax those payments is governed by Article 12. See *Boulez v. Commissioner*, 83 T.C. 584 (1984), *aff'd*, 810 F.2d 209 (D.C. Cir. 1986).

Computer software generally is protected by copyright laws around the world. Under the Convention, consideration received for the use, or the right to use, computer software is treated either as royalties or as business profits, depending on the facts and circumstances of the transaction giving rise to the payment.

The primary factor in determining whether consideration received for the use, or the right to use, computer software is treated as royalties or as business profits is the nature of the rights transferred. See Treas. Reg. section 1.861-18. The fact that the transaction is characterized as a license for copyright law purposes is not dispositive. For example, a typical retail sale of "shrink wrap" software generally will not be considered to give rise to royalty income, even though for copyright law purposes it may be characterized as a license.

The means by which the computer software is transferred are not relevant for purposes of the analysis. Consequently, if software is electronically transferred but the rights obtained by the

transferee are substantially equivalent to rights in a program copy, the payment will be considered business profits.

The term "royalties" also includes gain derived from the alienation of any right or property that would give rise to royalties, to the extent the gain is contingent on the productivity, use, or further alienation thereof. Gains that are not so contingent are dealt with under Article 13 (Gains).

The term "industrial, commercial, or scientific experience" (sometimes referred to as "know-how") has the meaning ascribed to it in paragraph 11 of the Commentary to Article 12 of the OECD Model Convention. Consistent with that meaning, the term may include information that is ancillary to a right otherwise giving rise to royalties, such as a patent or secret process.

Know-how also may include, in limited cases, technical information that is conveyed through technical or consultancy services. It does not include general educational training of the user's employees, nor does it include information developed especially for the user, such as a technical plan or design developed according to the user's specifications. Thus, as provided in paragraph 11 of the Commentary to Article 12 of the OECD Model, the term "royalties" does not include payments received as consideration for after-sales service, for services rendered by a seller to a purchaser under a guarantee, or for pure technical assistance.

The term "royalties" also does not include payments for professional services (such as architectural, engineering, legal, managerial, medical, software development services). For example, income from the design of a refinery by an engineer (even if the engineer employed know-how in the process of rendering the design) or the production of a legal brief by a lawyer is not income from the transfer of know-how taxable under Article 12, but is income from services taxable under either Article 14 (Independent Personal Services) or Article 15 (Dependent Personal Services). Professional services may be embodied in property that gives rise to royalties, however. Thus, if a professional contracts to develop patentable property and retains rights in the resulting property under the development contract, subsequent license payments made for those rights would be royalties.

### *Paragraph 3*

This paragraph provides an exception to the rule of paragraph 1 that gives the state of residence exclusive taxing jurisdiction in cases where the beneficial owner of the royalties carries on business through a permanent establishment in the state of source or performs independent personal services from a fixed base situated in that State and the royalties are attributable to that permanent establishment or fixed base. In such cases the provisions of Article 7 (Business Profits) or Article 14 (Independent Personal Services) will apply.

The provisions of paragraph 8 of Article 7 (Business Profits) apply to this paragraph. For example, royalty income that is attributable to a permanent establishment or a fixed base and that accrues during the existence of the permanent establishment or fixed base, but is received after the permanent establishment or fixed base no longer exists, remains taxable under the provisions of Articles 7 (Business Profits) or 14 (Independent Personal Services), respectively, and not under this Article.

*Paragraph 4*

Paragraph 4 provides that in cases involving special relationships between the payor and beneficial owner of royalties, Article 12 applies only to the extent the royalties would have been paid absent such special relationships (i.e., an arm's length royalty). Any excess amount of royalties paid remains taxable according to the laws of the two Contracting States with due regard to the other provisions of the Convention. If, for example, the excess amount is treated as a distribution of corporate profits under domestic law, such excess amount will be taxed as a dividend rather than as royalties, but the tax imposed on the dividend payment will be subject to the rate limitations of paragraph 2 of Article 10 (Dividends).

*Relation to Other Articles*

Notwithstanding the foregoing limitations on source country taxation of royalties, the saving clause of paragraph 4 of Article 1 (General Scope) permits the United States to tax its residents and citizens, subject to the special foreign tax credit rules of paragraph 3 of Article 23 (Relief from Double Taxation), as if the Convention had not come into force.

As with other benefits of the Convention, the benefits of exclusive residence State taxation of royalties under paragraph 1 of Article 12 are available to a resident of the other State only if that resident is entitled to those benefits under Article 22 (Limitation on Benefits).

## ARTICLE 13

### Capital Gains

Article 13 assigns either primary or exclusive taxing jurisdiction over gains from the alienation of property to the State of residence or the State of source and defines the terms necessary to apply the Article.

*Paragraph 1*

Paragraph 1 preserves the non-exclusive right of the State of source to tax gains attributable to the alienation of real property situated in that State. The paragraph therefore permits the United States to apply section 897 of the Internal Revenue Code to tax gains derived by a resident of Denmark that are attributable to the alienation of real property situated in the United States (as defined in paragraph 2). Gains attributable to the alienation of real property include gain from any other property that is treated as a real property interest within the meaning of paragraph 2.

*Paragraph 2*

This paragraph defines the term "real property situated in the other Contracting State." The term includes real property referred to in Article 6 (i.e., an interest in the real property itself), a "United States real property interest" (when the United States is the other Contracting State under

paragraph 1), and an equivalent interest in real property situated in Denmark.

Under section 897(c) of the Code the term "United States real property interest" includes shares in a U.S. corporation that owns sufficient U.S. real property interests to satisfy an asset-ratio test on certain testing dates. The term also includes certain foreign corporations that have elected to be treated as U.S. corporations for this purpose. Section 897(i). In applying paragraph 1 the United States will look through distributions made by a REIT. Accordingly, distributions made by a REIT are taxable under paragraph 1 of Article 13 (not under Article 10 (Dividends)) when they are attributable to gains derived from the alienation of real property.

### *Paragraph 3*

Paragraph 3 deals with the taxation of certain gains from the alienation of movable property forming part of the business property of a permanent establishment that an enterprise of a Contracting State has in the other Contracting State or of movable property pertaining to a fixed base available to a resident of a Contracting State in the other Contracting State for the purpose of performing independent personal services. This also includes gains from the alienation of such a permanent establishment (alone or with the whole enterprise) or of such fixed base. Such gains may be taxed in the State in which the permanent establishment or fixed base is located.

A resident of Denmark that is a partner in a partnership doing business in the United States generally will have a permanent establishment in the United States as a result of the activities of the partnership, assuming that the activities of the partnership rise to the level of a permanent establishment. Rev. Rul. 91-32, 1991-1 C.B. 107. Further, under paragraph 3, the United States generally may tax a partner's distributive share of income realized by a partnership on the disposition of movable property forming part of the business property of the partnership in the United States.

Paragraph 8 of Article 7 (Business Profits) refers to paragraph 3 of Article 13. That rule clarifies that income that is attributable to a permanent establishment or a fixed base, but that is deferred and received after the permanent establishment or fixed base no longer exists, may nevertheless be taxed by the State in which the permanent establishment or fixed base was located. Thus, under Article 13, gains derived by a resident of a Contracting State from the sale of movable property forming part of the business property of a permanent establishment in the other Contracting State may be taxed by that other State even if the income is deferred and received after the permanent establishment no longer exists.

### *Paragraph 4*

Paragraph 4 limits the taxing jurisdiction of the state of source with respect to gains from the alienation of ships, boats, aircraft or containers operated or used in international traffic or movable property pertaining to the operation or use of such ships, boats, aircraft or containers. Under paragraph 4, when such income is derived by an enterprise of a Contracting State, it is taxable only in that Contracting State. Notwithstanding paragraph 3, the rules of this paragraph apply even if the income is attributable to a permanent establishment maintained by the enterprise in the other Contracting State. This result is consistent with the general rule under Article 8

(Shipping and Air Transport) that confers exclusive taxing rights over international shipping and air transport income on the state of residence of the enterprise deriving such income.

#### *Paragraph 5*

Paragraph 5 preserves the right of a Contracting State (the host State) to tax the gains derived by an enterprise of the other Contracting State from the deemed alienation of an installation, drilling rig, or ship used in the host State for the exploration for or exploitation of oil and gas resources, but only to the extent of any depreciation taken in the host State. Thus, at the time of deemed alienation of the property under the law of the host State, an enterprise of the other Contracting State may be required to recapture the depreciation claimed in the host State of an oil or gas exploration or exploitation installation, drilling rig or ship. Because the amount that may be taxable is limited to the amount of any gain, depreciation will be recaptured only to the extent it has reduced the basis of the property below its fair market value.

Paragraph 5 is included in order to permit Denmark to impose its income tax, to the extent permitted under paragraph 5, at the time that an oil or gas exploration or exploitation installation, drilling rig or ship is deemed alienated under the income tax laws of Denmark. However, an accompanying provision is included under paragraph 7 in order to prevent double taxation that might otherwise result from the rule. Under this provision, which is discussed more fully below, a person who is subject to taxation on gain in connection with property deemed alienated can elect to be liable to tax in the residence State in the same year as if he had sold and repurchased the property, thus reducing the risk of double taxation because of timing differences.

#### *Paragraph 6*

Paragraph 6 grants to the State of residence of the alienator the exclusive right to tax gains from the alienation of property other than property referred to in paragraphs 1 through 5. For example, gain derived from shares, other than shares described in paragraphs 2 or 3, debt instruments and various financial instruments, may be taxed only in the State of residence, to the extent such income is not otherwise characterized as income taxable under another article (e.g., Article 10 (Dividends) or Article 11 (Interest)). Similarly, gain derived from the alienation of tangible personal property, other than tangible personal property described in paragraphs 3 or 4, may be taxed only in the State of residence of the alienator. Gain derived from the alienation of any property, such as a patent or copyright, that produces income taxable under Article 12 (Royalties) is taxable under Article 12 and not under this article, provided that such gain is of the type described in paragraph 2(b) of Article 12 (i.e., it is contingent on the productivity, use, or disposition of the property). Thus, under either article such gain is taxable only in the State of residence of the alienator. Sales by a resident of a Contracting State of real property located in a third state are not taxable in the other Contracting State, even if the sale is attributable to a permanent establishment located in the other Contracting State.

#### *Paragraph 7*

Both paragraphs 7 and paragraph 8 provide rules intended to coordinate the timing of the recognition of income under the U.S. and Danish tax systems.

Paragraph 7 provides a rule to coordinate U.S. and Danish taxation of gains in circumstances where a resident of one of the Contracting States is subject to tax in both Contracting States and one Contracting State deems a taxable alienation of property by such resident to have occurred, while the other Contracting State at that time does not find a realization, recognition or inclusion of income and thus defers, but does not forgive, taxation. In such a case the resident may elect in the annual return of income for the year of such alienation to be liable to tax in the latter Contracting State as if he had sold and repurchased the property for an amount equal to its fair market value at a time immediately prior to the deemed alienation. This provision would be useful in a case where a U.S. corporation transfers its drilling rig in Denmark, on which depreciation has been taken in Denmark, to its home office in the United States. Under the provisions of paragraph 5, Denmark could tax the built-in gain (limited to the amount of depreciation taken in Denmark) upon the deemed alienation. However, absent paragraph 7, the United States would defer taxation of any gain until the property was actually sold. If the period for foreign tax credit carryovers had already run at the time of actual disposition, the U.S. corporation might not receive a foreign tax credit, resulting in double taxation. If the U.S. corporation elected the benefits of paragraph 7, it would be subject to U.S. tax currently on the built-in gain, and take a new tax basis in the property.

Unlike paragraph 8, paragraph 7 is self-executing and does not require the agreement of the relevant competent authority. However, if in one Contracting State there are losses and gains from deemed alienation of different properties, then paragraph 7 must be applied consistently in the other Contracting State within the taxable period with respect to all such properties. Paragraph 7 only applies, however, if the deemed alienation of the properties results in a net gain.

#### *Paragraph 8*

Paragraph 8 deals with the treatment of gain on alienation of property in the course of a corporate or other reorganization. Under this provision, if a transaction is tax-deferred in the State of residence, then the transferee may ask the competent authority of the source State to enter into an agreement to defer tax to the extent necessary to avoid double taxation.

Paragraph 8 provides authority for coordination of Danish and U.S. rules with respect to the non-recognition of gain on corporate organizations, reorganizations, mergers, or similar transactions. Where a resident of one of the Contracting States alienates property in such a transaction, and profit, gain or income with respect to such alienation is not recognized for income tax purposes in the Contracting State of residence, the competent authority of the other State may agree, pursuant to paragraph 8, if requested by the person acquiring the property, to defer the recognition of the profit, gain or income with respect to such property. This deferral shall be for such time and under such conditions as may be stipulated in the agreement.

One situation in which this provision might be useful is the merger of two companies that are resident in one Contracting State, both of which have permanent establishments in the other Contracting State. For example, if two U.S. resident corporations, each with a permanent establishment in Denmark, merged in a transaction that qualified as a tax-free reorganization under section 368 but was taxable in Denmark, Denmark could tax built-in gain on assets of the

permanent establishments. When those assets eventually were sold, the United States might also tax the gain, but without a foreign tax credit if the period for tax credit carryovers had already run. In that case, the company surviving the merger could request that the Danish competent authority defer recognition of the gain until actual disposition of the assets, in order to assure a U.S. foreign tax credit for the Danish tax. Whether deferral should be granted is a matter entirely within the discretion of the competent authority.

#### *Relation to Other Articles*

Notwithstanding the foregoing limitations on taxation of certain gains by the State of source, the saving clause of paragraph 4 of Article 1 (General Scope) permits the United States to tax its citizens and residents as if the Convention had not come into effect. Thus, any limitation in this Article on the right of the United States to tax gains does not apply to gains of a U.S. citizen or resident. However, paragraphs 7 and 8 are excepted from the saving clause by virtue of paragraph 5(a) of Article 1. Thus, under paragraph 7, a U.S. corporation that is subject to tax upon a transfer of property from its Danish permanent establishment to its U.S. head office may elect to be subject to tax in the United States on the built-in gain and receive a step-up in basis for U.S. tax purposes. In addition, a U.S. citizen resident in Denmark may, subject to the discretion of the U.S. competent authority, obtain relief under paragraph 8 in the form of deferred recognition of profit, gain or income that is otherwise recognized or included in income under the Code but not under Danish law.

The benefits of this Article are also subject to the provisions of Article 22 (Limitation of Benefits). Thus, only a resident of a Contracting State that satisfies one of the conditions in Article 22 is entitled to the benefits of this Article.

### ARTICLE 14 Independent Personal Services

The Convention deals in separate articles with different classes of income from personal services. Article 14 deals with the general class of income from independent personal services and Article 15 deals with the general class of income from dependent personal services. Articles 16 through 20 provide exceptions and additions to these general rules for directors' fees (Article 16); performance income of artistes and sportsmen (Article 17); pensions in respect of personal service income, social security benefits, annuities, alimony, and child support payments (Article 18); government service salaries and pensions (Article 19); and certain income of students and trainees (Article 20).

#### *Paragraph 1*

Paragraph 1 provides the general rule that an individual who is a resident of a Contracting State and who derives income from performing personal services in an independent capacity will be exempt from tax in respect of that income by the other Contracting State. The income may be taxed in the other Contracting State only if the services are performed there and the income is attributable to a fixed base that is regularly available to the individual in that other State for the

purpose of performing his services.

Income derived by persons other than individuals or groups of individuals from the performance of independent personal services is not covered by Article 14. Such income generally would be business profits taxable in accordance with Article 7 (Business Profits). Income derived by employees of such persons generally would be taxable in accordance with Article 15 (Dependent Personal Services).

The term "fixed base" is not defined in the Convention, but its meaning is understood to be similar, but not identical, to that of the term "permanent establishment," as defined in Article 5 (Permanent Establishment). The term "regularly available" also is not defined in the Convention. Whether a fixed base is regularly available to a person will be determined based on all the facts and circumstances. In general, the term encompasses situations where a fixed base is at the disposal of the individual whenever he performs services in that State. It is not necessary that the individual regularly use the fixed base, only that the fixed base be regularly available to him. For example, a U.S. resident partner in a law firm that has offices in Denmark would be considered to have a fixed base regularly available to him in Denmark if work space in those offices (whether or not the same space) were made available to him whenever he wished to conduct business in Denmark, regardless of how frequently he conducted business in Denmark. On the other hand, an individual who had no office in Denmark and occasionally rented a hotel room to serve as a temporary office would not be considered to have a fixed base regularly available to him.

It is not necessary that the individual actually use the fixed base. It is only necessary that the fixed base be regularly available to him. For example, if an individual resident in the U.S. has an office in Denmark that he can use if he chooses when he is present in Denmark, that fixed base will be considered to be regularly available to him regardless of whether he conducts his activities there.

The term "personal services of an independent character" is not defined. It clearly includes those activities listed in paragraph 2 of Article 14 of the OECD Model, such as independent scientific, literary, artistic, educational or teaching activities, as well as the independent activities of physicians, lawyers, engineers, architects, dentists, and accountants. That list, however, is not exhaustive. The term includes all personal services performed by an individual for his own account, whether as a sole proprietor or a partner, where he receives the income and bears the risk of loss arising from the services. The taxation of income of an individual from those types of independent services which are covered by Articles 16 through 20 is governed by the provisions of those articles. For example, taxation of the income of a corporate director would be governed by Article 16 (Directors' Fees) rather than Article 14.

This Article applies to income derived by a partner resident in the Contracting State that is attributable to personal services of an independent character performed in the other State through a partnership that has a fixed base in that other Contracting State. Income which may be taxed under this Article includes all income attributable to the fixed base in respect of the performance of the personal services carried on by the partnership (whether by the partner himself, other partners in the partnership, or by employees assisting the partners) and any income from activities ancillary to the performance of those services (for example, charges for facsimile services).

Income that is not derived from the performance of personal services and that is not ancillary thereto (for example, rental income from subletting office space), will be governed by other Articles of the Convention.

The application of Article 14 to a service partnership may be illustrated by the following example: a partnership formed in Denmark has five partners (who agree to split profits equally), four of whom are resident and perform personal services only in Denmark at Office A, and one of whom performs personal services from Office B, a fixed base in the United States. In this case, the four partners of the partnership resident in Denmark may be taxed in the United States in respect of their share of the income attributable to the fixed base, Office B. The services giving rise to income which may be attributed to the fixed base would include not only the services performed by the one resident partner, but also, for example, if one of the four other partners came to the United States and worked on an Office B matter there, the income in respect of those services also. As noted above, this would be the case regardless of whether the partner from Denmark actually visited or used Office B when performing services in the United States.

Paragraph 8 of Article 7 (Business Profits) refers to Article 14. That rule clarifies that income that is attributable to a permanent establishment or a fixed base, but that is deferred and received after the permanent establishment or fixed base no longer exists, may nevertheless be taxed by the State in which the permanent establishment or fixed base was located. Thus, under Article 14, income derived by an individual resident of the United States from services performed in Denmark and attributable to a fixed base there may be taxed by Denmark even if the income is deferred and received after there is no longer a fixed base available to the resident in Denmark.

#### *Paragraph 2*

Paragraph 2 incorporates the principles of paragraph 3 of Article 7 (Business Profits) into Article 14. Thus, all relevant expenses, including expenses not incurred in the Contracting State where the fixed base is located, must be allowed as deductions in computing the net income from services subject to tax in the Contracting State where the fixed base is located.

#### *Relation to Other Articles*

If an individual resident of Denmark who is also a U.S. citizen performs independent personal services in the United States, the United States may, by virtue of the saving clause of paragraph 4 of Article 1 (General Scope) tax his income without regard to the restrictions of this Article, subject to the special foreign tax credit rules of paragraph 3 of Article 23 (Relief from Double Taxation).

### ARTICLE 15 Dependent Personal Services

Article 15 apportions taxing jurisdiction over remuneration derived by a resident of a Contracting State as an employee between the States of source and residence.

### *Paragraph 1*

Paragraph 1 contains the general rule of Article 15. Remuneration derived by a resident of a Contracting State as an employee may be taxed by the State of residence, and the remuneration also may be taxed by that other Contracting State to the extent derived from employment exercised (i.e., services performed) in the other Contracting State. Paragraph 1 also provides that the more specific rules of Articles 16 (Directors' Fees), 18 (Pensions, Social Security, Annuities, Alimony and Child Support), and 19 (Government Service) apply in the case of employment income described in one of these articles. Thus, even though the State of source has a right to tax employment income under Article 15, it may not have the right to tax that income under the Convention if the income is described, e.g., in Article 18 (Pensions, Social Security, Annuities, Alimony and Child Support) and is not taxable in the State of source under the provisions of that article.

Article 15 applies to "salaries, wages and other remuneration." Article 15 applies to any form of compensation for employment, including payments in kind, regardless of whether the remuneration is "similar" to salaries and wages. The U.S. position on in-kind payments was confirmed by the addition of paragraph 2.1 to the Commentary to Article 15 of the OECD Model in 1997.

Consistent with Code section 864(c)(6), Article 15 also applies regardless of the timing of actual payment for services. Thus, a bonus paid to a resident of the United States with respect to services performed in Denmark with respect to a particular taxable year would be subject to Article 15 for that year even if it was paid after the close of the year. Similarly, an annuity received for services performed in a taxable year would be subject to Article 15 despite the fact that it was paid in subsequent years. In either case, whether such payments were taxable in the State where the employment was exercised would depend on whether the tests of paragraph 2 were satisfied. Consequently, a person who receives the right to a future payment in consideration for services rendered in a Contracting State would be taxable in that State even if the payment is received at a time when the recipient is a resident of the other Contracting State.

### *Paragraph 2*

Paragraph 2 sets forth an exception to the general rule that employment income may be taxed in the State where the employment is exercised. Under paragraph 2, the State where the employment is exercised may not tax the income from the employment if three conditions are satisfied:

- (a) the individual is present in the other Contracting State for a period or periods not exceeding 183 days in any 12-month period that begins or ends during the relevant (i.e., the year in which the services are performed) calendar year;
- (b) the remuneration is paid by, or on behalf of, an employer who is not a resident of that other Contracting State; and
- (c) the remuneration is not borne as a deductible expense by a permanent establishment or fixed base that the employer has in that other State.

In order for the remuneration to be exempt from tax in the source State, all three conditions must

be satisfied. This exception is identical to that set forth in the OECD Model.

The 183-day period in condition (a) is to be measured using the "days of physical presence" method. Under this method, the days that are counted include any day in which a part of the day is spent in the host country. (Rev. Rul. 56-24, 1956-1 C.B. 851.) Thus, days that are counted include the days of arrival and departure; weekends and holidays on which the employee does not work but is present within the country; vacation days spent in the country before, during or after the employment period, unless the individual's presence before or after the employment can be shown to be independent of his presence there for employment purposes; and time during periods of sickness, training periods, strikes, etc., when the individual is present but not working. If illness prevented the individual from leaving the country in sufficient time to qualify for the benefit, those days will not count. Also, any part of a day spent in the host country while in transit between two points outside the host country is not counted. These rules are consistent with the description of the 183-day period in paragraph 5 of the Commentary to Article 15 in the OECD Model.

Conditions (b) and (c) are intended to ensure that a Contracting State will not be required to allow a deduction to the payor for compensation paid and at the same time to exempt the employee on the amount received. Accordingly, if a foreign person pays the salary of an employee who is employed in the host State, but a host State corporation or permanent establishment reimburses the payor with a payment that can be identified as a reimbursement, neither condition (b) nor (c), as the case may be, will be considered to have been fulfilled.

The reference to remuneration "borne by" a permanent establishment or fixed base is understood to encompass all expenses that economically are incurred and not merely expenses that are currently deductible for tax purposes. Accordingly, the expenses referred to include expenses that are capitalizable as well as those that are currently deductible. Further, salaries paid by residents that are exempt from income taxation may be considered to be borne by a permanent establishment or fixed base notwithstanding the fact that the expenses will be neither deductible nor capitalizable since the payor is exempt from tax.

### *Paragraph 3*

Paragraph 3 contains a special rule applicable to remuneration for services performed by a resident of a Contracting State as an employee aboard a ship or aircraft operated in international traffic. Such remuneration may be taxed only in the State of residence of the employee if the services are performed as a member of the regular complement of the ship or aircraft. The "regular complement" includes the crew. In the case of a cruise ship, for example, it may also include others, such as entertainers, lecturers, etc., employed by the shipping company to serve on the ship throughout its voyage. The use of the term "regular complement" is intended to clarify that a person who exercises his employment as, for example, an insurance salesman while aboard a ship or aircraft is not covered by this paragraph. This paragraph does not apply to persons dealt with in Article 14 (Independent Personal Services).

### *Relation to Other Articles*

If a U.S. citizen who is resident in Denmark performs services as an employee in the United States and meets the conditions of paragraph 2 for source country exemption, he nevertheless is taxable in the United States by virtue of the saving clause of paragraph 4 of Article 1 (General Scope), subject to the special foreign tax credit rule of paragraph 3 of Article 23 (Relief from Double Taxation).

## ARTICLE 16 Directors' Fees

This Article follows the OECD Model and provides that fees and other payments derived by a resident of a Contracting State in his capacity as a member of the board of directors of a company that is a resident of the other Contracting State may be taxed in that other State. This rule is an exception to the more general rules of Articles 14 (Independent Personal Services) and 15 (Dependent Personal Services). Thus, for example, in determining whether a director's fee paid to a non-employee director is subject to tax in the country of residence of the corporation, it is not relevant to establish whether the fee is attributable to a fixed base in that State.

The provision in the Convention is identical to the analogous provision in the OECD Model. The U.S. Model reached a different result, providing that the State of residence of the company may tax nonresident directors with no time or dollar threshold, but only with respect to remuneration for services performed in that State.

Because this Article does not restrict taxation by either Contracting State, the saving clause of paragraph 4 of Article 1 (General Scope) is irrelevant. If a U.S. citizen who is a Danish resident is a director of a Danish corporation, the United States may tax his full remuneration for those services, subject, however, to the special provisions of paragraph 3 of Article 23 (Relief from Double Taxation).

## ARTICLE 17 Artistes and Sportsmen

This Article deals with the taxation in a Contracting State of artistes (i.e., performing artists and entertainers) and sportsmen resident in the other Contracting State from the performance of their services as such. The Article applies both to the income of an entertainer or sportsman who performs services on his own behalf and one who performs services on behalf of another person, either as an employee of that person, or pursuant to any other arrangement. The rules of this Article take precedence, in some circumstances, over those of Articles 14 (Independent Personal Services) and 15 (Dependent Personal Services).

This Article applies only with respect to the income of performing artists and sportsmen. Others involved in a performance or athletic event, such as producers, directors, technicians, managers, coaches, etc., remain subject to the provisions of Articles 14 and 15. In addition, except as provided in paragraph 2, income earned by juridical persons is not covered by this Article.

*Paragraph 1*

Paragraph 1 describes the circumstances in which a Contracting State may tax the performance income of an entertainer or sportsman who is a resident of the other Contracting State. Under the paragraph, income derived by an individual resident of a Contracting State from activities as an entertainer or sportsman exercised in the other Contracting State may be taxed in that other State if the amount of the gross receipts derived by the performer exceeds \$20,000 (or its equivalent in Danish kroner) for the taxable year. The \$20,000 includes expenses reimbursed to the individual or borne on his behalf. If the gross receipts exceed \$20,000, the full amount, not just the excess, may be taxed in the State of performance.

Tax may be imposed under paragraph 1 even if the performer would have been exempt from tax under Articles 14 (Independent Personal Services) or 15 (Dependent Personal Services). On the other hand, if the performer would be exempt from host-country tax under this Article, but would be taxable under either Article 14 or 15, tax may be imposed under either of those Articles. Thus, for example, if a performer derives remuneration from his activities in an independent capacity, and the remuneration is not attributable to a fixed base, he may be taxed by the host State in accordance with this Article if his remuneration exceeds \$20,000 annually, despite the fact that he generally would be exempt from host State taxation under Article 14. However, a performer who receives less than the \$20,000 threshold amount and therefore is not taxable under Article 17, nevertheless may be subject to tax in the host country under Articles 14 or 15 if the tests for host-country taxability under those Articles are met. For example, if an entertainer who is an independent contractor earns \$19,000 of income in a State for the calendar year, but the income is attributable to a fixed base regularly available to him in the State of performance, that State may tax his income under Article 14.

Since it frequently is not possible to know until year-end whether the income an entertainer or sportsman derived from performances in a Contracting State will exceed \$20,000, nothing in the Convention precludes that Contracting State from withholding tax during the year and refunding after the close of the year if the taxability threshold has not been met.

Article 17 applies to all income connected with a performance by the entertainer, such as appearance fees, award or prize money, and a share of the gate receipts. Income derived from a Contracting State by a performer who is a resident of the other Contracting State from other than actual performance, such as royalties from record sales and payments for product endorsements, is not covered by this Article, but by other articles of the Convention, such as Article 12 (Royalties) or Article 14. For example, if an entertainer receives royalty income from the sale of live recordings, the royalty income would be exempt from source country tax under Article 12, even if the performance was conducted in the source country, although he could be taxed in the source country with respect to income from the performance itself under this Article if the dollar threshold is exceeded.

In determining whether income falls under this Article or another article, the controlling factor will be whether the income in question is predominantly attributable to the performance itself or other activities or property rights. For instance, a fee paid to a performer for endorsement of a performance in which the performer will participate would be considered to be so closely

associated with the performance itself that it normally would fall within this Article. Similarly, a sponsorship fee paid by a business in return for the right to attach its name to the performance would be so closely associated with the performance that it would fall under this Article as well. A cancellation fee would not be considered to fall within this Article but would be dealt with under Article 7 (Business Profits), 14 or 15.

Where an individual fulfills a dual role as performer and non-performer (such as a player-coach or an actor-director), but his role in one of the two capacities is negligible, the predominant character of the individual's activities should control the characterization of those activities. In other cases there should be an apportionment between the performance-related compensation and other compensation.

Consistent with Article 15, Article 17 also applies regardless of the timing of actual payment for services. Thus, a bonus paid to a resident of a Contracting State with respect to a performance in Denmark with respect to a particular taxable year would be subject to Article 17 for that year even if it was paid after the close of the year.

#### *Paragraph 2*

Paragraph 2 is intended to deal with the potential for abuse when a performer's income does not accrue directly to the performer himself, but to another person. Foreign performers frequently perform in the United States as employees of, or under contract with, a company or other person.

The relationship may truly be one of employee and employer, with no abuse of the tax system either intended or realized. On the other hand, the "employer" may, for example, be a company established and owned by the performer, which is merely acting as the nominal income recipient in respect of the remuneration for the performance (a "star company"). The performer may act as an "employee," receive a modest salary, and arrange to receive the remainder of the income from his performance in another form or at a later time. In such case, absent the provisions of paragraph 2, the income arguably could escape host-country tax because the company earns business profits but has no permanent establishment in that country. The performer may largely or entirely escape host-country tax by receiving only a small salary in the year the services are performed, perhaps small enough to place him below the dollar threshold in paragraph 1. The performer might arrange to receive further payments in a later year, when he is not subject to host-country tax, perhaps as deferred salary payments, dividends or liquidating distributions.

Paragraph 2 seeks to prevent this type of abuse while at the same time protecting the taxpayers' rights to the benefits of the Convention when there is a legitimate employee-employer relationship between the performer and the person providing his services. Under paragraph 2, when the income accrues to a person other than the performer, and the performer or related persons participate, directly or indirectly, in the receipts or profits of that other person, the income may be taxed in the Contracting State where the performer's services are exercised, without regard to the provisions of the Convention concerning business profits (Article 7) or independent personal services (Article 14). Thus, even if the "employer" has no permanent establishment or

fixed base in the host country, its income may be subject to tax there under the provisions of paragraph 2. Taxation under paragraph 2 is on the person providing the services of the performer. This paragraph does not affect the rules of paragraph 1, which apply to the performer himself. The income taxable by virtue of paragraph 2 is reduced to the extent of salary payments to the performer, which fall under paragraph 1.

For purposes of paragraph 2, income is deemed to accrue to another person (i.e., the person providing the services of the performer) if that other person has control over, or the right to receive, gross income in respect of the services of the performer. Direct or indirect participation in the profits of a person may include, but is not limited to, the accrual or receipt of deferred remuneration, bonuses, fees, dividends, partnership income or other income or distributions.

Paragraph 2 does not apply if the performer establishes that neither he nor any persons related to him participate directly or indirectly in the receipts or profits of the person providing the services of the performer. Assume, for example, that a circus owned by a U.S. corporation performs in Denmark, and promoters of the performance in Denmark pay the circus, which, in turn, pays salaries to the circus performers. The circus is determined to have no permanent establishment in Denmark. Since the circus performers do not participate in the profits of the circus, but merely receive their salaries out of the circus' gross receipts, the circus is protected by Article 7 and its income is not subject to host-country tax. Whether the salaries of the circus performers are subject to host-country tax under this Article depends on whether they exceed the \$20,000 threshold in paragraph 1.

Since pursuant to Article 1 (General Scope) the Convention only applies to persons who are residents of one of the Contracting States, if the star company is not a resident of one of the Contracting States then taxation of the income is not affected by Article 17 or any other provision of the Convention.

#### *Relationship to Other Articles*

This Article is subject to the provisions of the saving clause of paragraph 4 of Article 1 (General Scope). Thus, if an entertainer or a sportsman who is resident in Denmark is a citizen of the United States, the United States may tax all of his income from performances in the United States without regard to the provisions of this Article, subject, however, to the special foreign tax credit provisions of paragraph 3 of Article 23 (Relief from Double Taxation). In addition, benefits of this Article are subject to the provisions of Article 22 (Limitation on Benefits).

## ARTICLE 18

### Pensions, Social Security, Annuities, Alimony and Child Support Payments

This Article deals with the taxation of private (i.e., non-government service) pensions and annuities, social security benefits, alimony and child support payments.

#### *Paragraph 1*

Subparagraph 1(a) provides that, except as provided in subparagraph (b), distributions from pensions and other similar remuneration beneficially owned by a resident of a Contracting State in consideration of past employment are taxable only in the State in which they arise. Paragraph 4 of the Protocol defines a payment that is treated as a pension distribution under paragraph 1. Paragraph 4(a) provides that a payment shall be treated as a pension distribution for this purpose if it is a payment under a pension scheme recognized for tax purposes in the Contracting State where the pension scheme is established. Paragraph 4(b) provides that, for this purpose, pension schemes recognized for tax purposes shall include the schemes listed under clause (i) in the case of the United States and under clause (ii) in the case of Denmark. With reference to U.S. Law, clause (i) lists qualified plans under section 401(a), individual retirement plans (including individual retirement plans that are part of a simplified employee pension plan that satisfies section 408(k), individual retirement accounts, individual retirement annuities, section 408(p) accounts and Roth IRAs under section 408A), section 403(a) qualified plans, and section 403(b) plans. With reference to Danish law, clause (ii) lists pension schemes under Section I of the Act on Taxation of Pension Schemes (*pensionsbeskatningslovens afsnit I*). Subparagraph 1(d) makes explicit the fact that the term "pension distributions and other similar remuneration" includes both periodic and lump sum payments.

Under the prior Convention, distributions were taxable only in the country of residence. Since many retirees may have relied on the old rule when deciding to move from one Contracting State to another, subparagraph 1(b) provides a grandfather rule to prevent the tax burden of such retirees from being suddenly increased. This rule states that, if prior to the time of entry into force of this Convention, a person was a resident of a Contracting State and was receiving pension distributions arising in the other Contracting State, that person shall be taxable on pension distributions referred to in subparagraph (a) only in the first-mentioned State. Thus, subparagraph (b) provides for taxation only in the residence State, rather than taxation only in the source State, in the case of a pension distribution received by a citizen of one Contracting State who, before this Convention enters into force, is receiving a pension distribution arising in the other Contracting State.

Subparagraph 1(c) provides a rule for administrative convenience under which pension distributions shall be deemed to arise in a Contracting State only if paid by a pension scheme established in that State. This rule eliminates the necessity of dividing pension distributions between different countries on the basis of services performed in the various countries.

## *Paragraph 2*

The treatment of social security benefits is dealt with in paragraph 2. This paragraph provides that, notwithstanding the provision of paragraph 1, payments made by one of the Contracting States under the provisions of its social security or similar legislation to a resident of the other Contracting State or to a citizen of the United States will be taxable only in the Contracting State making the payment. This paragraph applies to social security beneficiaries whether they have contributed to the system as private sector or Government employees.

The phrase "similar legislation" is intended to refer to United States tier 1 Railroad Retirement benefits. The reference to U.S. citizens is necessary to ensure that a social security

payment by Denmark to a U.S. citizen who is not resident in the United States will not be taxable by the United States.

### *Paragraph 3*

Under paragraph 3, annuities that are derived and beneficially owned by an individual resident of a Contracting State are taxable only in that State. An annuity, as the term is used in this paragraph, means a stated sum paid periodically at stated times during a specified number of years, or for life, under an obligation to make the payment in return for adequate and full consideration (other than for services rendered). An annuity received in consideration for services rendered would be treated as deferred compensation and generally taxable in accordance with Article 15 (Dependent Personal Services).

### *Paragraphs 4 and 5*

Paragraphs 4 and 5 deal with alimony and child support payments, respectively. Alimony and child support payments are defined as periodic payments made pursuant to a written separation agreement or a decree of divorce, separate maintenance, or compulsory support. Paragraph 4, however, deals only with payments of that type that are deductible to the payor and taxable to the payee. Under that paragraph, alimony (i.e., a deductible payment that is taxable in the hands of the recipient) paid by a resident of a Contracting State to a resident of the other Contracting State is taxable under the Convention only in the State of residence of the recipient. Paragraph 5 deals with those periodic payments that are for the support of a child and that are not covered by paragraph 4 (i.e., those payments that either are not deductible to the payor or not taxable to the payee). These types of payments by a resident of a Contracting State to a resident of the other Contracting State shall be taxable only in the first-mentioned Contracting State.

### *Relationship to Other Articles*

Paragraphs 3 and 4 of Article 18 are subject to the saving clause of paragraph 4 of Article 1 (General Scope). Thus, a U.S. citizen who is resident in Denmark, and receives either an annuity or alimony payment from the United States, may be subject to U.S. tax on the payment, notwithstanding the rules in those two paragraphs that give the State of residence of the recipient the exclusive taxing right. Paragraph 1, with the exception of subparagraph (c), also is subject to the saving clause. Therefore, a U.S. citizen who is resident in Denmark, and receives a pension payment from a pension scheme established in Denmark may be subject to U.S. tax on the payment, but the United States will treat that payment as arising in Denmark for foreign tax credit purposes. Paragraphs 2 and 5 are excepted from the saving clause by virtue of paragraph 5(a) of Article 1. Thus, the United States will allow U.S. citizens and residents the benefits of paragraph 2 and 5.

## ARTICLE 19 Government Service

### *Paragraph 1*

Subparagraphs (a) and (b) of paragraph 1 deal with the taxation of government compensation (other than a pension addressed in paragraph 2). Subparagraph (a) provides that remuneration paid from the public funds of one of the States or its political subdivisions or local authorities to any individual who is rendering services to that State, political subdivision or local authority, which are in the discharge of governmental functions, is exempt from tax by the other State. Under subparagraph (b), such payments are, however, taxable exclusively in the other State (i.e., the host State) if the services are rendered in that other State and the individual is a resident of that State who is either a national of that State or a person who did not become resident of that State solely for purposes of rendering the services. The paragraph applies both to government employees and to independent contractors engaged by governments to perform services for them.

The remuneration described in paragraph 1 is subject to the provisions of this paragraph and not to those of Articles 14 (Independent Personal Services), 15 (Dependent Personal Services), 16 (Director's Fees) or 17 (Artistes and Sportsmen). If, however, the conditions of paragraph 1 are not satisfied, those other Articles will apply. Thus, if a local government sponsors a basketball team in an international tournament, and pays the athletes from public funds, the compensation of the players is covered by Article 17 and not Article 19, because the athletes are not engaging in a governmental function when they play basketball.

### *Paragraph 2*

Paragraph 2 deals with the taxation of a pension paid from the public funds of one of the States or a political subdivision or a local authority thereof to an individual in respect of services rendered to that State or subdivision or authority in the discharge of governmental functions. Subparagraph (a) provides that such a pension is taxable only in that State. Subparagraph (b) provides an exception under which such a pension is taxable only in the other State if the individual is a resident of, and a national of, that other State. Pensions paid to retired civilian and military employees of a Government of either State are intended to be covered under paragraph 2. Subparagraph 2 (b) is to be interpreted and applied consistently with the U.S., Danish and OECD Models. When benefits paid by a State in respect of services rendered to that State or a subdivision or authority are in the form of social security benefits, however, those payments are covered by paragraph 2 of Article 18 (Pensions, Social Security, Annuities, Alimony and Child Support). As a general matter, the result will be the same whether Article 18 or 19 applies, since social security benefits are taxable exclusively by the source country and so are government pensions. The result will differ only when the payment is made to a citizen and resident of the other Contracting State, who is not also a citizen of the paying State. In such a case, social security benefits continue to be taxable at source while government pensions become taxable only in the residence country.

The phrase "functions of a governmental nature" is not defined. In general it is understood to encompass functions traditionally carried on by a government. It generally would not include functions that commonly are found in the private sector (e.g., education, health care, utilities). Rather, it is limited to functions that generally are carried on solely by the government (e.g., military, diplomatic service, tax administrators) and activities that directly support the carrying out of those functions.

The use of the phrase "paid from the public funds of a Contracting State" is intended to clarify that remuneration and pensions paid by such entities as government-owned corporations are covered by the Article, as long as the other conditions of the Article are satisfied.

### *Paragraph 3*

Paragraph 3 provides that if the services are performed in connection with a business carried on by the State or individual subdivision or local authority, then paragraphs 1 and 2 do not apply. In such cases, the ordinary rules apply: Article 15 for wages and salaries, Article 16 for directors fees and other similar payments, Article 17 for artistes and sportsmen, and Article 18 for pensions.

### *Relation to Other Articles*

Under paragraph 5(b) of Article 1 (General Scope), the saving clause (paragraph 4 of Article 1) does not apply to the benefits conferred by one of the States under Article 19 if the recipient of the benefits is neither a citizen of Denmark, nor a person who has been admitted for permanent residence there (i.e., in the United States, a "green card" holder). Thus, a resident of a Contracting State who in the course of performing functions of a governmental nature becomes a resident of the other State (but not a permanent resident), would be entitled to the benefits of this Article. However, an individual who receives a pension paid by the Government of Denmark in respect of services rendered to that Government is taxable on that pension only in Denmark unless the individual is a U.S. citizen or acquires a U.S. green card.

## ARTICLE 20 Student and Trainees

This Article provides rules for host-country taxation of visiting students, apprentices or business trainees. Persons who meet the tests of the Article will be exempt from tax in the State that they are visiting with respect to designated classes of income. Several conditions must be satisfied in order for an individual to be entitled to the benefits of this Article.

First, the visitor must have been, either at the time of his arrival in the host State or immediately before, a resident of the other Contracting State.

Second, the purpose of the visit must be the full-time education or training of the visitor. Thus, if the visitor comes principally to work in the host State but also is a part-time student, he would not be entitled to the benefits of this Article, even with respect to any payments he may receive from abroad for his maintenance or education, and regardless of whether or not he is in a degree program. Whether a student is to be considered full-time will be determined by the rules of the educational institution at which he is studying. Similarly, a person who visits the host State for the purpose of obtaining business training and who also receives a salary from his employer for providing services would not be considered a trainee and would not be entitled to the benefits of this Article.

Third, a student must be studying at an accredited educational institution. (This requirement does not apply to business trainees or apprentices.) An educational institution is understood to be an institution that normally maintains a regular faculty and normally has a regular body of students in attendance at the place where the educational activities are carried on. An educational institution will be considered to be accredited if it is accredited by an authority that generally is responsible for accreditation of institutions in the particular field of study.

The host-country exemption in the Article applies only to payments received by the student, apprentice or business trainee for the purpose of his maintenance, education or training that arise outside the host State. A payment will be considered to arise outside the host State if the payor is located outside the host State. Thus, for example, if an employer from one Contracting State sends an employee to the other State for training, the payments the trainee receives from abroad from his employer for his maintenance or training while he is present in the host State will be exempt from host country tax. In all cases substance over form will prevail in determining the identity of the payor. Consequently, payments made directly or indirectly by the U.S. person with whom the visitor is training, but which have been routed through a non-host-country source, such as, for example, a foreign bank account, would not be treated as arising outside the United States for this purpose. Moreover, if a U.S. person reimbursed a foreign person for payments by the foreign person to the visitor, the payments by the foreign person would not be treated as arising outside the United States.

In the case of an apprentice or business trainee, the benefits of the Article will extend for a period of three years from the time that the visitor first arrives in the host country. If, however, an apprentice or trainee remains in the host country for a fourth year, thus losing the benefits of the Article, he would not retroactively lose the benefits of the Article for the first three years.

Finally, the exemption only applies to income from research undertaken in the public interest. Income from research undertaken for private benefit does not qualify for the exemption.

The saving clause of paragraph 4 of Article 1 (General Scope) does not apply to this Article with respect to an individual who is neither a citizen of the host State nor has been admitted for permanent residence there. The saving clause, however, does apply with respect to citizens and permanent residents of the host State. Thus, a U.S. citizen who is a resident of Denmark and who visits the United States as a full-time student at an accredited university will not be exempt from U.S. tax on remittances from abroad that otherwise constitute U.S. taxable income. A person, however, who is not a U.S. citizen, and who visits the United States as a student and remains long enough to become a resident under U.S. law, but does not become a permanent resident (i.e., does not acquire a green card), will be entitled to the full benefits of the Article.

#### Article 21 Other Income

Article 21 generally assigns taxing jurisdiction over income not dealt with in the other

articles (Articles 6 through 20) of the Convention to the State of residence of the beneficial owner of the income and defines the terms necessary to apply the article. An item of income is "dealt with" in another article if it is the type of income described in the article and it has its source in a Contracting State. For example, all royalty income that arises in a Contracting State and that is beneficially owned by a resident of the other Contracting State is "dealt with" in Article 12 (Royalties).

Examples of items of income covered by Article 21 include income from gambling, punitive (but not compensatory) damages, covenants not to compete, and income from certain financial instruments to the extent derived by persons not engaged in the trade or business of dealing in such instruments (unless the transaction giving rise to the income is related to a trade or business, in which case it is dealt with under Article 7 (Business Profits)). The article also applies to items of income that are not dealt with in the other articles because of their source or some other characteristic. For example, Article 11 (Interest) addresses only the taxation of interest arising in a Contracting State. Interest arising in a third State that is not attributable to a permanent establishment, therefore, is subject to this Article.

Distributions from partnerships and distributions from trusts are not generally dealt with under this Article because partnership and trust distributions generally do not constitute income. Under the U.S. Internal Revenue Code, partners include in income their distributive share of partnership income annually, and partnership distributions themselves generally do not give rise to income. Also, under the Code, trust income and distributions have the character of the associated distributable net income and therefore would generally be covered by another article of the Convention.

#### *Paragraph 1*

Paragraph 1 contains the general rule of Article 21. Items of income not dealt with in other articles and beneficially owned by a resident of a Contracting State will be taxable only in the State of residence. This exclusive right of residence State taxation applies whether or not the residence State exercises its right to tax the income covered by the Article.

This paragraph refers to "items of income beneficially owned by a resident of a Contracting State" rather than simply to "items of income of a resident of a Contracting State." This reference makes explicit the implicit understanding in other treaties that the exclusive residence taxation provided by paragraph 1 applies only when a resident of a Contracting State is the beneficial owner of the income. This should also be understood from the phrase "income of a resident of a Contracting State." The addition of a reference to beneficial ownership merely removes any possible ambiguity. Thus, source taxation of income not dealt with in other articles of the Convention is not limited by paragraph 1 if it is nominally paid to a resident of the other Contracting State, but is beneficially owned by a resident of a third State.

#### *Paragraph 2*

Paragraph 2 provides an exception to the general rule of paragraph 1 for income, other than income from real property, that is attributable to a permanent establishment or fixed base

maintained in a Contracting State by a resident of the other Contracting State. The taxation of such income is governed by the provisions of Articles 7 (Business Profits) and 14 (Independent Personal Services). Therefore, income arising outside the United States that is attributable to a permanent establishment maintained in the United States by a resident of Denmark generally would be taxable by the United States under the provisions of Article 7. This would be true even if the income is sourced in a third State.

There is an exception to this general rule with respect to income a resident of a Contracting State derives from real property located outside the other Contracting State (whether in the first-mentioned Contracting State or in a third State) that is attributable to the resident's permanent establishment or fixed base in the other Contracting State. In such a case, only the first-mentioned Contracting State (i.e., the State of residence of the person deriving the income) and not the host State of the permanent establishment or fixed base may tax that income. This special rule for foreign-situs property is consistent with the general rule, also reflected in Article 6 (Income from Real Property (Immovable Property)), that only the situs and residence States may tax real property and real property income. Even if such property is part of the property of a permanent establishment or fixed base in a Contracting State, that State may not tax it if neither the situs of the property nor the residence of the owner is in that State.

#### *Relation to Other Articles*

This Article is subject to the saving clause of paragraph 4 of Article 1 (General Scope). Thus, the United States may tax the income of a resident of Denmark that is not dealt with elsewhere in the Convention, if that resident is a citizen of the United States. The Article is also subject to the provisions of Article 22 (Limitation on Benefits). Thus, if a resident of Denmark earns income that falls within the scope of paragraph 1 of Article 21, but that is taxable by the United States under U.S. law, the income would be exempt from U.S. tax under the provisions of Article 21 only if the resident satisfies one of the tests of Article 22 for entitlement to benefits.

### ARTICLE 22 Limitation of Benefits

#### *Purpose of Limitation of Benefits Provisions*

The United States views an income tax treaty as a vehicle for providing treaty benefits to residents of the two Contracting States. This statement begs the question of who is to be treated as a resident of a Contracting State for the purpose of being granted treaty benefits. The Commentaries to the OECD Model authorize a tax authority to deny benefits, under substance-over-form principles, to a nominee in one State deriving income from the other on behalf of a third-country resident. In addition, although the text of the OECD Model does not contain express anti-abuse provisions, the Commentaries to Article 1 contain an extensive discussion approving the use of such provisions in tax treaties in order to limit the ability of third-state residents to obtain treaty benefits. The United States holds strongly to the view that tax treaties should include provisions that specifically prevent misuse of treaties by residents of third countries. Consequently, all recent U.S. income tax treaties contain comprehensive Limitation on Benefits

provisions.

A treaty that provides treaty benefits to any resident of a Contracting State permits "treaty shopping:" the use, by residents of third states, of legal entities established in a Contracting State with a principal purpose to obtain the benefits of a tax treaty between the United States and the other Contracting State. It is important to note that this definition of treaty shopping does not encompass every case in which a third-state resident establishes an entity in a U.S. treaty partner, and that entity enjoys treaty benefits to which the third-state resident would not itself be entitled. If the third- country resident had substantial reasons for establishing the structure that were unrelated to obtaining treaty benefits, the structure would not fall within the definition of treaty shopping set forth above.

Of course, the fundamental problem presented by this approach is that it is based on the taxpayer's intent, which a tax administrator is normally ill-equipped to identify. In order to avoid the necessity of making this subjective determination, Article 22 sets forth a series of objective tests. The assumption underlying each of these tests is that a taxpayer that satisfies the requirements of any of the tests probably has a real business purpose for the structure it has adopted, or has a sufficiently strong nexus to the other Contracting State (e.g., a resident individual) to warrant benefits even in the absence of a business connection, and that this business purpose or connection is sufficient to justify the conclusion that obtaining the benefits of the Convention is not a principal purpose of establishing or maintaining residence.

For instance, the assumption underlying the "active trade or business" test under paragraph 3 is that a third-country resident that establishes a "substantial" operation in the other State and that derives income from a related activity in the United States would not do so primarily to avail itself of the benefits of the Convention; it is presumed in such a case that the investor had a valid business purpose for investing in the other State, and that the link between that trade or business and the U.S. activity that generates the treaty-benefited income manifests a business purpose for placing the U.S. investments in the entity in the other State. It is considered unlikely that the investor would incur the expense of establishing a substantial trade or business in the other State simply to obtain the benefits of the Convention. A similar rationale underlies other tests in Article 22.

While these tests provide useful surrogates for identifying actual intent, these mechanical tests cannot account for every case in which the taxpayer was not treaty shopping. Accordingly, Article 22 also includes a provision (paragraph 7) authorizing the competent authority of a Contracting State to grant benefits. While an analysis under paragraph 7 may well differ from that under one of the other tests of Article 22, its objective is the same: to identify investors whose residence in the other State can be justified by factors other than a purpose to derive treaty benefits.

Article 22 and the anti-abuse provisions of domestic law complement each other, as Article 22 effectively determines whether an entity has a sufficient nexus to the Contracting State to be treated as a resident for treaty purposes, while domestic anti-abuse provisions (e.g., business purpose, substance-over-form, step transaction or conduit principles) determine whether a particular transaction should be recast in accordance with its substance. Thus, internal law

principles of the source State may be applied to identify the beneficial owner of an item of income, and Article 22 then will be applied to the beneficial owner to determine if that person is entitled to the benefits of the Convention with respect to such income.

### *Structure of the Article*

The structure of the Article is as follows: Paragraph 1 states the general rule that residents are entitled to benefits otherwise accorded to residents only to the extent provided in the Article. Paragraph 2 lists a series of attributes of a resident of a Contracting State, the presence of any one of which will entitle that person to all the benefits of the Convention. Paragraph 3 provides that, with respect to a person not entitled to benefits under paragraph 2, benefits nonetheless may be granted to that person with regard to certain types of income. Paragraph 4 describes the general “derivative benefits” test. Paragraph 5 provides for limited “derivative benefits” for shipping and air transport income. Paragraph 6 provides definitions. Paragraph 7 discusses the competent authorities’ discretionary powers.

### *Paragraph 1*

Paragraph 1 provides that a resident of a Contracting State will be entitled to the benefits otherwise accorded to residents of a Contracting State under the Convention only to the extent provided in the Article. The benefits otherwise accorded to residents under the Convention include all limitations on source-based taxation under Articles 6 through 21, the treaty-based relief from double taxation provided by Article 23 (Relief from Double Taxation), and the protection afforded to residents of a Contracting State under Article 24 (Non-Discrimination). Some provisions do not require that a person be a resident in order to enjoy the benefits of those provisions. These include paragraph 1 of Article 24 (Non-Discrimination), Article 25 (Mutual Agreement Procedure), and Article 28 (Diplomatic Agents and Consular Officers). Article 22 accordingly does not limit the availability of the benefits of these provisions.

### *Paragraph 2*

Paragraph 2 has seven subparagraphs, each of which describes a category of residents that are entitled to all benefits of the Convention. It is intended that the provisions of paragraph 2 will be self executing. Unlike the provisions of paragraph 7, discussed below, claiming benefits under paragraph 2 does not require advance competent authority ruling or approval. The tax authorities may, of course, on review, determine that the taxpayer has improperly interpreted the paragraph and is not entitled to the benefits claimed.

#### *Individuals -- Subparagraph 2(a)*

Subparagraph 2(a) provides that individual residents of a Contracting State will be entitled to all treaty benefits. If such an individual receives income as a nominee on behalf of a third-country resident, benefits may be denied under the respective articles of the Convention by the requirement that the beneficial owner of the income be a resident of a Contracting State.

#### *Governmental Entities -- Subparagraph 2(b)*

Subparagraph 2(b) provides that a Contracting State, a political subdivision or local authorities thereof, or any agency or instrumentality of such State, subdivision or authority, will be entitled to all benefits of the Convention.

*Publicly-Traded Corporations -- Subparagraph 2(c)(i) and 2(c)(ii)*

Subparagraph 2(c) applies to two categories of corporations: publicly-traded corporations and subsidiaries of publicly-traded corporations. Clause (i) of subparagraph 2(c) provides that a company will be entitled to all the benefits of the Convention if all the shares in the class or classes of shares that represent more than 50 percent of the voting power and value of the company are listed on a recognized stock exchange and substantially and regularly traded on one or more "recognized stock exchanges". Paragraph 6(c) provides that the term "recognized stock exchange" means

(i) the NASDAQ System owned by the National Association of Securities Dealers, and any stock exchange registered with the Securities and Exchange Commission as a national securities exchange for purposes of the Securities Exchange Act of 1934;

(ii), the Copenhagen Stock Exchange and the stock exchanges of Amsterdam, Brussels, Frankfurt, Hamburg, London, Paris, Stockholm, Sydney, Tokyo and Toronto; and

(iii) any other stock exchanges agreed upon by the competent authorities of both Contracting States.

If a company has only one class of shares, it is only necessary to consider whether the shares of that class are regularly traded on a recognized stock exchange. If the company has more than one class of shares, it is necessary as an initial matter to determine whether one of the classes accounts for more than half of the voting power and value of the company. If so, then only those shares are considered for purposes of the regular trading requirement. If no single class of shares accounts for more than half of the company's voting power and value, it is necessary to identify a group of two or more classes of the company's shares that account for more than half of the company's voting power and value, and then to determine whether each class of shares in this group satisfies the regular trading requirement. Although in a particular case involving a company with several classes of shares it is conceivable that more than one group of classes could be identified that account for more than 50% of the shares, it is only necessary for one such group to satisfy the requirements of this subparagraph in order for the company to be entitled to benefits. Benefits would not be denied to the company even if a second, non-qualifying, group of shares with more than half of the company's voting power and value could be identified.

The term "substantially and regularly traded" is defined in the Convention under paragraph 6 (f)(i) and (ii). Under paragraph (f)(i) of the convention a class is considered to be "substantially and regularly traded" if two requirements are met: trades in the class of shares are effected on one or more recognized stock exchanges in other than de minimis quantities during every quarter, and the aggregate number of shares of that class traded on stock exchange or exchanges during the previous fiscal year is at least 6 percent of the average number of shares or units outstanding in that class (including shares held by taxable nonstock corporations) during that

taxable year.

The “substantially and regularly traded” requirement can be met by trading on any recognized exchange or exchanges located in either State. Trading on one or more recognized stock exchanges may be aggregated for purposes of this requirement. Thus, a U.S. company could satisfy the regularly traded requirement through trading, in whole or in part, on a recognized stock exchange located in Denmark.

Clause (ii) of subparagraph 2 (c) provides a test under which certain companies that are directly or indirectly controlled by taxable nonstock corporations (“TNCs”) entitled to benefits under paragraph (g) but that otherwise would meet the publicly-traded test may be entitled to the benefits of the Convention. This test is necessary because it is common for a TNC to hold 100% of the “Class A” shares of another company (either a holding company or an operating company). The Class A shares have a disproportionate amount of the voting power but have little or no rights to dividends. The subsidiary operating company or holding company also issues “Class B” shares, which have preferential treatment as to dividends. Class A shares held by TNCs are listed but not traded on the Copenhagen stock exchange. Any class A shares that are not held by TNCs and all Class B shares are both listed and traded on the Copenhagen stock exchange. This rule is included to ensure that a corporation whose voting shares are substantially owned by a Danish TNC is not precluded from qualifying as a publicly-traded company, so long as there is sufficient trading in the rest of its shares.

A company will qualify under this test if one or more such TNCs own shares representing more than 50 percent of the voting power of the company and all other shares are listed on a recognized stock exchange and are substantially and regularly traded on one or more recognized stock exchanges. For purposes of determining whether a company satisfies the requirements of clause (c)(ii) of paragraph 2, the term “substantially and regularly traded” in paragraph 6 (f)(i) is applied as if all the shares issued by the company were one class of shares, and shares held by taxable nonstock corporations will be considered outstanding for purposes of determining whether 6 percent of the outstanding shares have been traded during a taxable year. Without this rule, it might be possible for a small class of shares to qualify a company as substantially and regularly traded.

*Subsidiaries of Publicly-Traded Corporations -- Subparagraph 2(c)(iii)*

Clause (iii) of subparagraph 2(c) provides a test under which certain companies that are directly or indirectly controlled by companies satisfying the publicly-traded test of subparagraph 2(c)(i) or (ii) may be entitled to the benefits of the Convention. Under this test, a company will be entitled to the benefits of the Convention if at least 50 percent of each class of shares in the company is directly or indirectly owned by five or fewer companies entitled to benefits under subparagraph 2(c)(i) or (ii), or any combination thereof.

The test under clause (iii) differs from that under subparagraph 2(c)(i) in that at least 50 percent of each class of the company's shares, not merely the class or classes accounting for more than 50 percent of the company's votes and value, must be held by publicly-traded companies described in subparagraph 2(c)(i). Thus, the test under subparagraph 2(c)(iii) considers the

ownership of every class of shares outstanding, while the test under subparagraph 2(c)(i) only considers those classes that account for a majority of the company's voting power and value.

Clause (iii) permits indirect ownership. Consequently, the ownership by five or fewer publicly-traded companies described in clause (i) or (ii), or any combination thereof, need not be direct. However, any intermediate owners in the chain of ownership must themselves be entitled to benefits under paragraph 2.

*Tax Exempt Organizations -- Subparagraph 2(d)*

Subparagraph 2(d) provides that the tax exempt organizations described in subparagraph 1(b)(i) of Article 4 (Residence) will be entitled to all the benefits of the Convention. These entities are entities that generally are exempt from tax in their State of residence and that are organized and operated exclusively to fulfill religious, educational, scientific and other charitable purposes. Like the U.S. Model, this provision does not limit the uses to which the charity may put its funds. Thus, a Danish charity would qualify even if all of its funds were used to provide humanitarian relief to refugees in a third country.

*Pension Funds -- Subparagraph 2(e)*

Subparagraph 2(e) provides that a legal person, whether or not exempt from tax, organized under the laws of a Contracting State to provide a pension or other similar benefits to employees, including self-employed individuals, pursuant to a plan, will be entitled to all the benefits of the Convention, provided that more than 50 percent of the person's beneficiaries, members or participants are individuals resident in either Contracting State. In the United States, these are the tax-exempt organizations described in subparagraph 1(b)(ii) of Article 4 (Residence). However, Denmark now taxes some pension funds, so the U.S. Model language was modified. For purposes of this provision, the term "beneficiaries" should be understood to refer to the persons receiving benefits from the organization.

*Ownership/Base Erosion -- Subparagraph 2(f)*

Subparagraph 2(f) provides a two-part test, the so-called ownership and base erosion test. This test applies to any form of legal entity that is a resident of a Contracting State. Both parts of the test must be satisfied for the resident to be entitled to benefits under subparagraph 2(f).

The ownership part of the test, under clause (i), requires that 50 percent or more of the beneficial interest in the person (in the case of a corporation, 50 percent or more of the vote and value of the company's shares) be owned on at least half the days of the person's taxable year by persons who are themselves entitled to benefits under other tests of paragraph 2 (i.e., subparagraphs (a), (b), (c), (d), or (e)). The ownership may be indirect through other persons themselves entitled to benefits under paragraph 2.

Trusts may be entitled to benefits under this provision if they are treated as residents under Article 4 (Residence) and they otherwise satisfy the requirements of this subparagraph. For purposes of this subparagraph, the beneficial interests in a trust will be considered to be owned by

its beneficiaries in proportion to each beneficiary's actuarial interest in the trust. The interest of a remainder beneficiary will be equal to 100 percent less the aggregate percentages held by income beneficiaries. A beneficiary's interest in a trust will not be considered to be owned by a person entitled to benefits under the other provisions of paragraph 2 if it is not possible to determine the beneficiary's actuarial interest. Consequently, if it is not possible to determine the actuarial interest of any beneficiaries in a trust, the ownership test under clause i) cannot be satisfied, unless all beneficiaries are persons entitled to benefits under the other subparagraphs of paragraph 2.

The base erosion part of the test under subparagraph 2(f) requires that less than 50 percent of the person's gross income for the taxable year be paid or accrued, in the form of payments that are deductible for tax purposes in the entity's State of residence directly or indirectly, to non-residents of either State (unless the payment is attributable to a permanent establishment situated in either Contracting State).

Paragraph 6 (a) provides that “gross income” for purposes of subparagraph 2 (f) will be gross income for the first taxable period preceding the current taxable period, provided that the amount of gross income for the first taxable period preceding the current taxable period shall be deemed to be no less than the average of the annual amounts of gross income for the four taxable periods preceding the current taxable period.

Paragraph 6 (b)(i) provides that the term “deductible payments” for purposes of subparagraph 2(f) includes payments for interest or royalties, but does not include payments at arm’s length for the purchase or use of or the right to use tangible property in the ordinary course of business or remuneration at arm’s length for services performed in the Contracting State in which the person making such payments is a resident.

To the extent they are deductible from the taxable base, trust distributions would be considered deductible payments. Depreciation and amortization deductions, which are not “payments,” are disregarded for this purpose. The purpose of this provision is to determine whether the income derived from the source State is in fact subject to the tax regime of either State. Consequently, payments to any resident of either State, as well as payments that are attributable to permanent establishments in either State, are not considered base-eroding payments for this purpose (to the extent that these recipients do not themselves base erode to non-residents).

#### *Danish Taxable Nonstock Corporations -- Subparagraph 2(g)*

Paragraph 2(g) provides a special rule for a Danish TNC, which is a vehicle to preserve control of operating companies by the TNC through its control of voting shares, with public shareholders receiving most rights to dividends of the operating company. A TNC may qualify for all the benefits of the Convention if it meets specific requirements under a two-part test.

Under paragraph 6(e), the term “taxable nonstock corporation” (“TNC”) as used in paragraph 2 means a foundation that is taxable in accordance with paragraph 1 of Article 1 of the Danish Act on Taxable Nonstock Corporations (*fonde der beskattes efter fondsbeskatningsloven*).” A TNC is a legal person that is controlled by a professional board of

directors, the majority of which must be unrelated to the persons that founded the TNC. As a foundation, a TNC must have a charter governing the corporation's operations and identifying any TNC beneficiaries and their entitlement to distributions from the TNC. One TNC cannot own another. A TNC's capital is irrevocably separated from the control of any person ("founder") contributing assets to the TNC at the time the TNC is established. A TNC's assets can never be inherited nor can such assets be paid out in liquidation except to creditors. TNCs are subject to income tax at the same rate (32%) and in exactly the same way as Danish corporations, except that a TNC can deduct charitable contributions, whereas a regular Danish corporation cannot deduct them, and a TNC, like any other foundation, can deduct distributions to members of the founder's family provided that these family members are resident in Denmark and are taxable in Denmark at the full rate, which is from 45% to 59%. Distributions to other persons, e.g., Danish nonresidents, are not deductible.

The two-part test in subparagraph (g) is a modification of the ownership-base erosion test that is necessary because TNCs do not have owners and thus cannot be subject to any ownership test. This test was included for TNCs in order to treat them as similarly as possible to other Danish corporations.

The first part of the test under subparagraph (g)(i) is satisfied if no more than 50% of the amount of its gross income (excluding the TNC's tax-exempt income) is paid or accrued in the form of deductible payments in the taxable year and in each of the preceding three taxable years, directly or indirectly, to persons who are not entitled to benefits under subparagraphs (a), b), ((i), (c)(iii) by virtue of (c)(i), (d) or (e). This means that no more than 50% of the amount of the TNC's gross income (excluding its tax-exempt income) can be paid to persons other than residents of either Contracting State that qualify for treaty benefits as an individual (subparagraph (a)), a Contracting State, etc. (subparagraph b)), a company that is publicly traded (subparagraph (c) (i)), a corporation that is owned directly or indirectly by publicly traded companies (subparagraph (c)(iii) by virtue of subparagraph (c)(i)), a charitable organization, etc. (subparagraph (d)) or a pension plan (subparagraph (e)).

The second part of the test under subparagraph (g)(ii) is satisfied if no more than 50% of the amount of the total income of the TNC (including its tax-exempt income) is paid or accrued, in the form of deductible payments and non-deductible distributions, in the taxable year and in each of the preceding three taxable years, directly, or indirectly to persons who are not entitled to benefits under subparagraphs (a), b), (c)(i), (c)(iii) by virtue of (c)(i), (d), or (e).

The term "gross income" is not defined in the Convention. Thus, in accordance with paragraph 2 of Article 3 (General Definitions), in determining whether a person deriving income from United States sources is entitled to the benefits of the Convention, the United States will ascribe the meaning to the term that it has in the United States. In such cases, "gross income" means gross receipts, or where an enterprise is engaged in a business which includes the manufacture or production of goods, gross receipts reduced by the direct costs of labor and materials attributable to such manufacture or production and paid or payable out of such receipts.

For purposes of paragraph 2 (g), the term "deductible payments" is defined, under paragraph 6 (b)(i), to include payments for interest or royalties, but not payments at arm's length

for the purchase or use of or the right to use tangible property in the ordinary course of business or remuneration at arm's length for services performed in the Contracting State in which the person making the payments is a resident and, under paragraph 6 b)(ii), to include deductible distributions made by a taxable non-stock corporation.

### *Paragraph 3*

Paragraph 3 sets forth a test under which a resident of a Contracting State that is not generally entitled to benefits of the Convention under paragraph 2 may receive treaty benefits with respect to certain items of income that are connected to an active trade or business conducted in its State of residence. Paragraph 3 provides an alternative test for any entity that satisfies its terms.

Subparagraph 3(a) sets forth a three-pronged test that must be satisfied in order for a resident of a Contracting State to be entitled to the benefits of the Convention with respect to a particular item of income. First, the resident must be engaged in the active conduct of a trade or business in its State of residence. Second, the income derived from the other State must be derived in connection with, or be incidental to, that trade or business. Third, if there is common ownership of the activities in both States, the trade or business must be substantial in relation to the activity in the other State that generated the item of income. These determinations are made separately for each item of income derived from the other State. It therefore is possible that a person would be entitled to the benefits of the Convention with respect to one item of income but not with respect to another. If a resident of a Contracting State is entitled to treaty benefits with respect to a particular item of income under paragraph 3, the resident is entitled to all benefits of the Convention insofar as they affect the taxation of that item of income in the other State. Set forth below is a discussion of each of the three prongs of the test under paragraph 3.

### *Trade or Business -- Subparagraphs 3(a)(i) and (b)*

The term "trade or business" is not defined in the Convention. Pursuant to paragraph 2 of Article 3 (General Definitions), when determining whether a resident of the other State is entitled to the benefits of the Convention under paragraph 3 with respect to income derived from U.S. sources, the United States will ascribe to this term the meaning that it has under the law of the United States. Accordingly, the United States competent authority will refer to the regulations issued under section 367(a) for the definition of the term "trade or business." In general, therefore, a trade or business will be considered to be a specific unified group of activities that constitute or could constitute an independent economic enterprise carried on for profit. Furthermore, a corporation generally will be considered to carry on a trade or business only if the officers and employees of the corporation conduct substantial managerial and operational activities. See Code section 367(a)(3) and the regulations thereunder.

Notwithstanding this general definition of trade or business, subparagraph 3(b) provides that the business of making or managing investments will be considered to be a trade or business only when part of banking, insurance or securities activities conducted by a bank, insurance company, or registered securities dealer. Conversely, such activities conducted by a person other than a bank, insurance company or registered securities dealer will not be considered to be the

conduct of an active trade or business, nor would they be considered to be the conduct of an active trade or business if conducted by a banking or insurance company or registered securities dealer but not as part of the company's banking, insurance or dealer business.

Because a headquarters operation is in the business of managing investments, a company that functions solely as a headquarters company will not be considered to be engaged in an active trade or business for purposes of paragraph 3.

*Derived in Connection With Requirement -- Subparagraphs 3(a)(ii) and (d)*

Subparagraph 3(d) provides that income is derived in connection with a trade or business if the income-producing activity in the other State is a line of business that forms a part of or is complementary to the trade or business conducted in the State of residence by the income recipient. Although no definition of the terms "forms a part of" or "complementary" is set forth in the Convention, it is intended that a business activity generally will be considered to "form a part of" a business activity conducted in the other State if the two activities involve the design, manufacture or sale of the same products or type of products, or the provision of similar services. In order for two activities to be considered to be "complementary," the activities need not relate to the same types of products or services, but they should be part of the same overall industry and be related in the sense that the success or failure of one activity will tend to result in success or failure for the other. In cases in which more than one trade or business is conducted in the other State and only one of the trades or businesses forms a part of or is complementary to a trade or business conducted in the State of residence, it is necessary to identify the trade or business to which an item of income is attributable. Royalties generally will be considered to be derived in connection with the trade or business to which the underlying intangible property is attributable. Dividends will be deemed to be derived first out of earnings and profits of the treaty-benefited trade or business, and then out of other earnings and profits. Interest income may be allocated under any reasonable method consistently applied. A method that conforms to U.S. principles for expense allocation will be considered a reasonable method.

Finally, a resident in one of the States also will be entitled to the benefits of the Convention with respect to income derived from the other State if the income is "incidental" to the trade or business conducted in the recipient's State of residence. Subparagraph 3(d) provides that income derived from a State will be incidental to a trade or business conducted in the other State if the production of such income facilitates the conduct of the trade or business in the other State. An example of incidental income is the temporary investment of working capital derived from a trade or business.

*Substantiality -- Subparagraphs 3(a)(iii) and (c)*

As indicated above, subparagraph 3(a)(iii) provides that income that a resident of a State derives from the other State will be entitled to the benefits of the Convention under paragraph 3 only if the income is derived in connection with a trade or business conducted in the recipient's State of residence and that trade or business is "substantial" in relation to the income-producing activity in the other State. Subparagraph 3(c) provides that whether the trade or business of the income recipient is substantial will be determined based on all the facts and circumstances. These

circumstances generally would include the relative scale of the activities conducted in the two States and the relative contributions made to the conduct of the trade or businesses in the two States.

In addition to this subjective rule, subparagraph 3(c) provides a safe harbor under which the trade or business of the income recipient may be deemed to be substantial based on three ratios that compare the size of the recipient's activities to those conducted in the other State. The three ratios compare: the value of the assets in the recipient's State to the assets used in the other State; the gross income derived in the recipient's State to the gross income derived in the other State; and the payroll expense in the recipient's State to the payroll expense in the other State. The average of the three ratios with respect to the preceding taxable year must exceed 10 percent, and each individual ratio must exceed 7.5 percent. If any individual ratio does not exceed 7.5 percent for the preceding taxable year, the average for the three preceding taxable years may be used instead. Thus, if the taxable year is 1998, the preceding year is 1997. If one of the ratios for 1997 is not greater than 7.5 percent, the average ratio for 1995, 1996, and 1997 with respect to that item may be used.

The term "value" also is not defined in the Convention. Therefore, this term also will be defined under U.S. law for purposes of determining whether a person deriving income from United States sources is entitled to the benefits of the Convention. In such cases, "value" generally will be defined using the method used by the taxpayer in keeping its books for purposes of financial reporting in its country of residence. See Treas. Reg. §1.884-5(e)(3)(ii)(A).

Only items actually located or incurred in the two Contracting States are included in the computation of the ratios. If the person from whom the income in the other State is derived is not wholly-owned by the recipient (and parties related thereto) then the items included in the computation with respect to such person must be reduced by a percentage equal to the percentage control held by persons not related to the recipient. For instance, if a United States corporation derives income from a corporation in the other State in which it holds 80 percent of the shares, and unrelated parties hold the remaining shares, for purposes of subparagraph 3(c) only 80 percent of the assets, payroll and gross income of the company in the other State would be taken into account.

Consequently, if neither the recipient nor a person related to the recipient has an ownership interest in the person from whom the income is derived, the substantiality test always will be satisfied (the denominator in the computation of each ratio will be zero and the numerator will be a positive number). Of course, the other two prongs of the test under paragraph 3 would have to be satisfied in order for the recipient of the item of income to receive treaty benefits with respect to that income. For example, assume that a resident of a Contracting State is in the business of banking in Denmark. The bank loans money to unrelated residents of the United States. The bank would satisfy the substantiality requirement of this subparagraph with respect to interest paid on the loans because it has no ownership interest in the payers.

The substantiality requirement is intended to prevent a narrow case of treaty-shopping abuses in which a company attempts to qualify for benefits by engaging in de minimis connected business activities in the treaty country in which it is resident, i.e., activities that have little

economic cost or effect with respect to the company's business as a whole.

The application of the substantiality test only to income from related parties focuses only on potential abuse cases, and does not hamper certain other kinds of non-abusive activities, even though the income recipient resident in a Contracting State may be very small in relation to the entity generating income in the other Contracting State. For example, if a small U.S. research firm develops a process that it license to a very large, unrelated, Danish pharmaceutical manufacturer, the size of the U.S. research firm would not have to be tested against the size of the Danish manufacturer. Similarly, a small U.S. bank that makes a loan to a very large unrelated Danish business would not have to pass a substantiality test to receive treaty benefits under subparagraph (c).

#### *Paragraph 4*

Paragraph 4 sets forth a limited derivative benefits test that applies to all treaty benefits. In general, a derivative benefits test entitles the resident of a state to treaty benefits if the beneficial owner of the resident would have been entitled to the same benefit had the income in question flowed directly to that owner. Paragraph 4 provides a derivative benefits test under which a company that is a resident of a Contracting State may be entitled to some or all of the benefits of the Convention. In order to be entitled to all the benefits of the Convention under this paragraph, the company must meet an ownership test, a base reduction test, and a derivative benefits test. These tests are described below.

Subparagraph 4(a)(i) sets forth the ownership test. Under this test, at least 95 percent of the aggregate vote and value of the company's shares must be owned by any combination of seven or fewer persons that are entitled to all of the benefits of the Convention under paragraph 2 or are residents of member states of the European Union or of the European Economic Area or of parties to NAFTA and that meet the requirements of subparagraph (c). Ownership may be direct or indirect.

Subparagraph 4(a)(ii) sets forth the base reduction test. This test is the same as the base reduction test in subparagraph 2(c)(iii), except that for purposes of this test amounts paid or accrued to persons that are residents of a member state of the European Union or the European Economic Area or of a party to NAFTA are excluded from deductible payments. Subparagraph 6 b)(i), which defines the term "deductible payments" for certain purposes, applies for purposes of paragraph 4. Therefore, under the base reduction test of paragraph 4, the term "deductible payments" includes payments for interest or royalties, but does not include payments at arm's length for the purchase or use of or the right to use tangible property in the ordinary course of business or remuneration at arm's length for services performed in the Contracting State in which the person making such payments is a resident.

However, under subparagraph 4(b), this ownership test will not be met, and benefits will not be granted, if the majority of a "disproportionate" class of shares is held by persons other than residents of a member state of the European Union or of the European Economic Area or a party to the North American Free Trade Agreement that meet the requirements of subparagraph (c). In general, a class of shares is "disproportionate" for these purposes if they entitle the shareholder to

a disproportionately higher participation in the earnings that the company generates in the other State through particular assets or activities of the company. Such participation may take any form, including dividends or redemption payments. Such a class of shares would include so-called alphabet stock or tracking stock that entitles the holder to earnings produced by a particular division or subsidiary of the company in the source State. This provision applies if the disproportionate class of shares is issued by the company claiming benefits, or by a company that controls the company claiming benefits. In this context, control does not require majority ownership.

Pursuant to subparagraph 4(c)(i), a person will be considered a resident of a member state of the European Union, the European Economic Area, or of a party to NAFTA for purposes of this paragraph only if the person would be entitled to the benefits of a comprehensive income tax convention in force between any Member State of the European Union or of the European Economic Area or a party to the North American Free Trade Agreement and the Contracting State from which the benefits of this Convention are claimed. However, if that treaty does not contain a comprehensive limitation on benefits provision including provisions similar to those of subparagraphs (c) and (f) of paragraph 2 and paragraph 3 of this Article) then that person must be a person who would still have qualified for the benefits of that treaty under provisions analogous to the provisions of paragraph 2 of this Article had that treaty contained a limitation on benefits provision with those provisions.

Notwithstanding subparagraph 4(a), subparagraph 4(c)(ii) sets forth an additional requirement that must be satisfied in order for a company that is a resident of a Contracting State to be entitled to the benefits of the Convention accorded under Articles 10 (Dividends), 11 (Interest) or 12 (Royalties). This provision requires a comparison of the rate of tax imposed on a particular payment under the Convention to the rate of tax that would be imposed under the income tax convention between the source state and any European Union or European Economic Area member state or party to NAFTA whose residents account for some of the ownership interest described in subparagraph 4(a)(i). Benefits will be extended with respect to such a payment under this provision only if at least 95 percent of the company's shares are owned by persons resident in a European Union or European Economic Area member state or a party to NAFTA for which the rate (or rates) of withholding tax provided in the income tax convention between the source state and such state is less than or equal to the rate or rates imposed under the Convention. This rate comparison is by definition satisfied for persons owning shares that are entitled to benefits under paragraph 2 of this Article. If for a particular payment less than 95 percent of the ownership interest is accounted for by persons that satisfy the rate comparison, then paragraph 4 does not apply to that payment (although it may apply to other payments and would apply to items of income, profit or gain other than those referred to in subparagraph 4(b)).

The rates of tax to be compared under this paragraph are the rate of withholding tax that the source State would impose under the Convention and the rate that would be imposed had the European Union, European Economic Area or NAFTA resident directly received its proportionate share of the dividend, interest or royalty payment. For example, assume that a U.S. company pays interest to DanCo, a company resident in Denmark. DanCo has two equal shareholders, a corporation resident in Canada and a corporation resident in Denmark. Each person's proportionate share of the interest payment is 50 percent of the interest. If the Canadian

corporation had received this portion of the interest directly, it would be subject to a withholding tax of 10 percent under the income tax treaty between the United States and Canada. If the Danish corporation had received its portion of the interest directly, it would be subject to a withholding tax of 0 percent under the Convention. These rates are not the same rates that would apply under the Convention. Therefore, the test under subparagraph 4 is not satisfied with respect to these interest payments.

The provisions of paragraph 4 are intended to be self executing. Unlike the provisions of paragraph 7, discussed below, claiming benefits under paragraph 4 does not require advance competent authority ruling or approval. The tax authorities may, of course, on review, determine that the taxpayer has improperly interpreted the paragraph and is not entitled to the benefits claimed.

#### *Paragraph 5*

Paragraph 5 provides that a resident of one of the States that derives income from the other State described in Article 8 (Shipping and Air Transport) and that is not entitled to the benefits of the Convention under paragraphs 1 through 3, shall nonetheless be entitled to the benefits of the Convention with respect to income described in Article 8 if it meets one of two tests. These tests in substance duplicate the rules set forth under Code section 883 and therefore afford little additional benefit beyond those provided by the Code. These tests are described below.

First, a resident of one of the States will be entitled to the benefits of the Convention with respect to income described in Article 8 if at least 50 percent of the beneficial interest in the person (in the case of a company, at least 50 percent of the aggregate vote and value of the stock of the company) is owned, directly or indirectly, by qualified persons or citizens of the United States or individuals who are residents of a third state that grants by law, common agreement, or convention an exemption under similar terms for profits as mentioned in Article 8 to citizens and corporations of the other State. This provision is analogous to the relief provided under Code section 883(c)(1).

Alternatively, a resident of one of the States will be entitled to the benefits of the Convention with respect to income described in Article 8 if at least 50 percent of the beneficial of the person (in the case of a company, at least 50 percent of the aggregate vote and value of the stock of the company) is owned directly or indirectly by a company or combination of companies the stock of which is substantially and regularly traded on an established securities market in a third state, provided that the third state grants by law, common agreement or convention an exemption under similar terms for profits as mentioned in Article 8 to citizens and corporations of the other State. This provision is analogous to the relief provided under Code section 883(c)(3).

The provisions of paragraph 5 are intended to be self executing. Unlike the provisions of paragraph 7, discussed below, claiming benefits under paragraph 5 does not require advance competent authority ruling or approval. The tax authorities may, of course, on review, determine that the taxpayer has improperly interpreted the paragraph and is not entitled to the benefits claimed.

A resident of a Contracting State that derives income from the other State described in Article 8 (Shipping and Air Transport) but that does not meet all the requirements of paragraph 5 will nevertheless qualify for treaty benefits if it meets the requirements of any other test under Article 22, i.e., the test under paragraph 2(c)(publicly traded test) or the test under paragraph 3 (active trade or business test).

#### *Paragraph 6*

Paragraph 6 defines certain terms used in this Article, which are discussed above in connection with the relevant paragraphs.

#### *Paragraph 7*

Paragraph 7 provides that a resident of one of the States that is not otherwise entitled to the benefits of the Convention may be granted benefits under the Convention if the competent authority of the other Contracting State so determines. This discretionary provision is included in recognition of the fact that, with the increasing scope and diversity of international economic relations, there may be cases where significant participation by third country residents in an enterprise of a Contracting State is warranted by sound business practice or long-standing business structures and does not necessarily indicate a motive of attempting to derive unintended Convention benefits.

The competent authority of a State will base a determination under this paragraph on whether the establishment, acquisition, or maintenance of the person seeking benefits under the Convention, or the conduct of such person's operations, has or had as one of its principal purposes the obtaining of benefits under the Convention. Thus, persons that establish operations in one of the States with the principal purpose of obtaining the benefits of the Convention ordinarily will not be granted relief under paragraph 7.

The competent authority may determine to grant all benefits of the Convention, or it may determine to grant only certain benefits. For instance, it may determine to grant benefits only with respect to a particular item of income in a manner similar to paragraph 3. Further, the competent authority may set time limits on the duration of any relief granted.

It is assumed that, for purposes of implementing paragraph 7, a taxpayer will not be required to wait until the tax authorities of one of the States have determined that benefits are denied before he will be permitted to seek a determination under this paragraph. In these circumstances, it is also expected that if the competent authority determines that benefits are to be allowed, they will be allowed retroactively to the time of entry into force of the relevant treaty provision or the establishment of the structure in question, whichever is later.

Finally, there may be cases in which a resident of a Contracting State may apply for discretionary relief to the competent authority of his State of residence. For instance, a resident of a State could apply to the competent authority of his State of residence in a case in which he had been denied a treaty-based credit under Article 23, (Relief from Double Taxation) on the grounds

that he was not entitled to benefits of the article under Article 22.

## ARTICLE 23

### Relief from Double Taxation

This Article describes the manner in which each Contracting State undertakes to relieve double taxation. Both the United States and Denmark use the foreign tax credit method under its internal law, and by treaty.

#### *Paragraph 1*

The United States agrees, in paragraph 1, to allow to its citizens and residents a credit against U.S. tax for income taxes paid or accrued to Denmark. Paragraph 1 also provides that Denmark's covered taxes are income taxes for U.S. purposes.

In most cases, the credit under the Convention is allowed in accordance with the provisions and subject to the limitations of U.S. law, as that law may be amended over time, so long as the general principle of this Article, i.e., the allowance of a credit, is retained. Thus, although the Convention provides for a foreign tax credit, the terms of the credit are determined by the provisions, at the time a credit is given, of the U.S. statutory credit.

As indicated, the U.S. credit under the Convention is subject to the various limitations of U.S. law (see Code sections 901 - 908). For example, the credit against U.S. tax generally is limited to the amount of U.S. tax due with respect to net foreign source income within the relevant foreign tax credit limitation category (see Code section 904(a) and (d)), and the dollar amount of the credit is determined in accordance with U.S. currency translation rules (see, e.g., Code section 986). Similarly, U.S. law applies to determine carryover periods for excess credits and other inter-year adjustments. When the alternative minimum tax is due, the alternative minimum tax foreign tax credit generally is limited in accordance with U.S. law to 90 percent of alternative minimum tax liability. Furthermore, nothing in the Convention prevents the limitation of the U.S. credit from being applied on a per-country basis (should internal law be changed), an overall basis, or to particular categories of income (see, e.g., Code section 865(h)).

Subparagraph (b) provides for a deemed-paid credit, consistent with section 902 of the Code, to a U.S. corporation in respect of dividends received from a corporation resident in Denmark of which the U.S. corporation owns at least 10 percent of the voting stock. This credit is for the tax paid by the corporation of Denmark on the profits out of which the dividends are considered paid.

The provisions of subparagraph (c) refer to taxes paid to Denmark by residents or nationals of the United States under the Danish Hydrocarbon Tax Act, and may allow for greater foreign tax credits than under U.S. statutory law. The Danish Hydrocarbon Tax Act encompasses a number of different taxes. First, under Section 4 of the Act, taxpayers with oil and gas concessions are required to pay a company tax at the same rate (currently 32 percent) as other companies, which is assessed under ordinary rules, but with additional limitations. For example,

income subject to tax under Section 4, and thus potentially subject to the Hydrocarbon Tax is calculated under a special “separate assessment,” under which losses from other activities cannot be used to offset income derived from the extraction of hydrocarbons in Denmark (Danish law, however, does permit the use of losses from hydrocarbon extraction activities to offset income from other activities). In addition, taxpayers with income at or above a certain level (i.e., income exceeding 250% of their investment) are required to pay the Hydrocarbon Tax (currently 70 percent).

The Hydrocarbon Tax Act also encompasses taxes on other income earned in relation to oil and gas activities, including: wages, income of companies without concessions, income of persons engaged in the liberal professions of every kind, including consultants, income of a personally owned business (unincorporated businesses) and on the income of estates of persons subject to the tax. However, a person subject to these provisions of the Hydrocarbon Tax Act is not considered as having derived income that is separately assessed, and therefore is not subject to the provisions of subparagraph (c). Such persons would be subject to the normal rules of this Article.

Under subparagraph (c)(i), the United States agrees to allow to its nationals and residents, as a direct or a deemed-paid credit against their U.S. tax, the appropriate amount of taxes (as defined below) paid or accrued to Denmark by or on behalf of such nationals or residents on income separately assessed under the Hydrocarbon Tax Act. However, these credits are subject to the following limitations imposed by subparagraphs (c)(i) and (c)(iii) for persons claiming credits under the Convention:

(1) With respect to income taxes paid or accrued to Denmark on oil and gas extraction income from oil or gas wells in Denmark, the appropriate amount allowed as a credit for a taxable year shall not exceed the maximum U.S. statutory corporate tax rate for the taxable year to which such U.S. resident or national is subject, multiplied by the amount of Danish source oil and gas extraction income.

(2) With respect to income taxes paid or accrued to Denmark on Danish source oil-related income (other than oil and gas extraction income from oil or gas wells in Denmark), the appropriate amount allowed as a credit for the taxable year shall not exceed the maximum U.S. statutory corporate tax rate to which the U.S. resident or national is subject, multiplied by the amount of Danish source oil-related income.

(3) With respect to income taxes paid or accrued to Denmark on other separately assessed Danish source income (other than oil and gas extraction income from oil or gas wells in Denmark and other Danish source oil-related income), the appropriate amount allowed as a credit for a taxable year shall not exceed the maximum U.S. statutory corporate rate to which the U.S. resident or national is subject, multiplied by the amount of such other Danish source income.

In addition to these limitations, subparagraph (c) (ii) states that the appropriate amounts described above are subject to the limitations imposed under the law of the United States that apply to creditable taxes under sections 901 and 903 under the Code. Thus, as is generally the case under U.S. income tax conventions, provisions such as Code sections 901(c), 902, 904, 905, 907, 908 and 911 apply for purposes of computing the allowable credit under subparagraphs (c).

The amount of Danish source oil and gas extraction income from oil or gas wells in

Denmark is determined under the principles of section 907(c) of the Code. U.S. principles are also used to determine the amount of Danish source oil-related income and other Danish source income.

Subparagraph (c) (ii) imposes a limit on the carryover of credits for taxes paid or accrued to Denmark on oil and gas extraction income from oil or gas wells in Denmark separately assessed under the Hydrocarbons Tax Act which are in excess of the amount allowed as a credit in subparagraph (c)(i). These excess credits may only be used as a credit in another taxable year (subject to the carryover rules under U.S. domestic law), and only against U.S. taxes on other oil and gas extraction income separately assessed under the Hydrocarbon Tax Act. The carryover credits are allowable in the year in which deemed paid or accrued subject to any relevant limitations provided by the Code, such as those of sections 904(a) and 907(b). The same limitations apply to the carryover of credits for taxes paid or accrued to Denmark on Danish source oil-related income and other Danish source income separately assessed under the Hydrocarbon Tax Act.

If the provisions of the Convention are relied upon to claim a foreign tax credit for Danish income taxes paid by a person earning income separately assessed under the Hydrocarbon Tax Act, and any such payments would not otherwise be creditable under the Code, then the limitations of subparagraph (c) apply, whether or not the tax is paid in the taxable year, and all such Danish income taxes must be treated as provided in the Convention.

If the taxes paid or accrued to Denmark by a person earning income separately assessed under the Hydrocarbon Tax Act are creditable under the Code, and such taxes exceed the proportion of U.S. tax that taxable income attributable to Danish sources (as determined under the Convention) bears to entire income, such taxes are creditable under the Code against U.S. tax with respect to income from other foreign sources on the same basis as other creditable taxes and subject to the limitations of the Code. Moreover, if a person earning income separately assessed under the Hydrocarbon Tax Act chooses in a year not to rely upon the provisions of the Convention relevant to a claim for a foreign tax credit for any amounts paid to Denmark, then the Convention limitations contained in subparagraph (c) would not apply in that year and, pursuant to the current overall foreign tax credit limitation of the Code, Danish taxes creditable under the Code and creditable taxes paid to any other country can offset U.S. tax on income from Danish and other foreign sources.

Finally, paragraph 1 provides that for the purposes of this Article, the Danish taxes referred to in paragraphs 1 (b) and 2 of Article 2 (Taxes Covered) are considered to be income taxes and are allowed as credits against U.S. tax on income, subject to all of the provisions and limitations of this paragraph.

#### *Paragraph 2*

Paragraph 2 provides special rules for the tax treatment in both States of certain types of income derived from U.S. sources by U.S. citizens who are resident in Denmark. Since U.S. citizens, regardless of residence, are subject to United States tax at ordinary progressive rates on their worldwide income, the U.S. tax on the U.S. source income of a U.S. citizen resident in

Denmark may exceed the U.S. tax that may be imposed under the Convention on an item of U.S. source income derived by a resident of Denmark who is not a U.S. citizen.

Subparagraph (a) provides special credit rules for Denmark with respect to items of income that are either exempt from U.S. tax or subject to reduced rates of U.S. tax under the provisions of the Convention when received by residents of Denmark who are not U.S. citizens. The tax credit of Denmark allowed by paragraph 3(a) under these circumstances, to the extent consistent with the law of Denmark, need not exceed the U.S. tax that may be imposed under the provisions of the Convention, other than tax imposed solely by reason of the U.S. citizenship of the taxpayer under the provisions of the saving clause of paragraph 4 of Article 1 (General Scope). Thus, if a U.S. citizen resident in Denmark receives U.S. source portfolio dividends, the foreign tax credit granted by Denmark would be limited to 15 percent of the dividend -- the U.S. tax that may be imposed under subparagraph 2(b) of Article 10 (Dividends) -- even if the shareholder is subject to U.S. net income tax because of his U.S. citizenship. For interest and royalty income that is exempt under the provisions of Articles 11 (Interest) and 12 (Royalties), Denmark would be permitted to tax the entire amount.

Paragraph 2(b) eliminates the potential for double taxation that can arise because subparagraph 2(a) provides that Denmark need not provide full relief for the U.S. tax imposed on its citizens resident in Denmark. The subparagraph provides that the United States will credit the income tax paid or accrued to Denmark, after the application of subparagraph 2(a). It further provides that in allowing the credit, the United States will not reduce its tax below the amount that is taken into account in Denmark in applying subparagraph 2(a).

Since the income described in paragraph 2 is U.S. source income, special rules are required to resource some of the income to Denmark in order for the United States to be able to credit Denmark's tax. This resourcing is provided for in subparagraph 2(c), which deems the items of income referred to in subparagraph 2(a) to be from foreign sources to the extent necessary to avoid double taxation under paragraph 2(b). The rules of paragraph 2(c) apply only for purposes of determining U.S. foreign tax credits with respect to taxes referred to in paragraphs 1(b) and 2 of Article 2 (Taxes Covered).

The following two examples illustrate the application of paragraph 2 in the case of a U.S. source portfolio dividend received by a U.S. citizen resident in Denmark. In both examples, the U.S. rate of tax on residents of Denmark under paragraph 2(b) of Article 10 (Dividends) of the Convention is 15 percent. In both examples the U.S. income tax rate on the U.S. citizen is 36 percent. In example I, Denmark's income tax rate on its resident (the U.S. citizen) is 25 percent (below the U.S. rate), and in example II, the rate on its resident is 40 percent (above the U.S. rate).

	<u>Example I</u>	<u>Example II</u>
<u>Paragraph 2(a)</u>		
U.S. dividend declared	\$100.00	\$100.00
Notional U.S. withholding tax		

per Article 10(2)(b)	15.00	15.00
Danish taxable income	100.00	100.00
Danish tax before credit	25.00	40.00
Danish foreign tax credit	15.00	15.00
Net post-credit Danish tax	10.00	25.00

Paragraphs 2(b) and (c)

U.S. pre-tax income	\$100.00	\$100.00
U.S. pre-credit citizenship tax	36.00	36.00
Notional U.S. withholding tax	15.00	15.00
U.S. tax available for credit	21.00	21.00
Income re-sourced from U.S. to Denmark	27.77	58.33
U.S. tax on re-sourced income	10.00	21.00
U.S. credit for other Denmark tax	10.00	21.00
Net post-credit U.S. tax	11.00	0.00
 Total U.S. tax	 26.00	 15.00
Total Danish tax	10.00	25.00

In both examples, in the application of paragraph 2(a), Denmark credits a 15 percent U.S. tax against its residence tax on the U.S. citizen.

In example I, the net Danish tax after foreign tax credit is \$10.00; in the second example it is \$25.00. In the application of paragraphs 2(b) and 2(c), from the U.S. tax due before credit of \$36.00, the United States subtracts the amount of the U.S. source tax of \$15.00, against which no U.S. foreign tax credit is to be allowed. This provision assures that the United States will collect the tax that it is due under the Convention as the source country. In both examples, the maximum amount of U.S. tax against which credit for Danish tax may be claimed is \$21.00. Initially, all of the income in these examples was U.S. source. In order for a U.S. credit to be allowed for the full amount of the Danish tax, an appropriate amount of the income must be re-sourced. The amount that must be resourced depends on the amount of Danish tax for which the U.S. citizen is claiming a U.S. foreign tax credit. In example I, the Danish tax was \$10.00. In order for this amount to be creditable against U.S. tax, \$27.77 (\$10 divided by .36) must be resourced as foreign source. When the Danish tax is credited against the U.S. tax on the resourced income, there is a net U.S. tax of \$11.00 due after credit. In example II, the Danish tax was \$25 but, because the amount available for credit is reduced under subparagraph 3(c) by the amount of the U.S. source tax, only \$21.00 is eligible for credit. Accordingly, the amount that must be resourced is limited to the amount necessary to ensure a foreign tax credit for \$21 of Danish tax, or \$58.33 (\$21 divided by 0.36). Thus, even though other State tax was \$25.00 and the U.S. tax available for credit was \$21.00, there is no excess credit available for carryover.

*Paragraph 3*

Specific rules are provided in paragraph 3 under which Denmark, in imposing tax on its residents, provides relief for U.S. taxes paid by those residents. Subparagraph (a) provides that when a resident of Denmark derives income which, in accordance with the provisions of the Convention, may be taxed by the United States, Denmark shall allow as a credit against Danish income taxes an amount equal to those taxes paid to the United States.

Subparagraph (b) limits the credits against Danish taxes to those taxes which are attributable to the income that has been taxed by the United States. This restriction based on the U.S. tax is consistent with the “per-country” foreign tax credit limitations imposed under Denmark’s domestic law.

Subparagraph (c) provides that when a resident of Denmark derives income which, in accordance with the provisions of the Convention, may be taxed by the United States, Denmark shall allow the credit against Danish tax described in subparagraph (b). However, subparagraph (c) also permits Denmark to include the income corresponding to the U.S. tax in the resident’s tax base for purposes of determining the Danish tax. This rule is a variation of the “exemption with progression rule,” adapted to accommodate Denmark’s credit system. It is also similar to U.S. domestic law, which permits credits for foreign taxes paid, while at the same time taxing residents on worldwide income. Finally, subparagraph (c) provides that for the purposes of this Article, the U.S. taxes referred to in paragraphs 1(a) and 2 of Article 2 (Taxes Covered) are considered to be income taxes and are allowed as credits against Danish tax on income, subject to all of the provisions and limitations of this paragraph.

#### *Relation to Other Articles*

By virtue of the exceptions in subparagraph 5(a) of Article 1 this Article is not subject to the saving clause of paragraph 4 of Article 1 (General Scope). Thus, the United States will allow a credit to its citizens and residents in accordance with the Article, even if such credit were to provide a benefit not available under the Code.

### ARTICLE 24 Non-Discrimination

This Article assures that nationals of a Contracting State, in the case of paragraph 1, and residents of a Contracting State, in the case of paragraphs 2 through 4, will not be subject, directly or indirectly, to discriminatory taxation in the other Contracting State. For this purpose, non-discrimination means providing national treatment. Not all differences in tax treatment, either as between nationals of the two States, or between residents of the two States, are violations of this national treatment standard. Rather, the national treatment obligation of this Article applies only if the nationals or residents of the two States are comparably situated.

Each of the relevant paragraphs of the Article provides that two persons that are comparably situated must be treated similarly. Although the actual words differ from paragraph to paragraph (e.g., paragraph 1 refers to two nationals "in the same circumstances," paragraph 2 refers to two enterprises "carrying on the same activities" and paragraph 4 refers to two

enterprises that are "similar"), the common underlying premise is that if the difference in treatment is directly related to a tax-relevant difference in the situations of the domestic and foreign persons being compared, that difference is not to be treated as discriminatory (e.g., if one person is taxable in a Contracting State on worldwide income and the other is not, or tax may be collectible from one person at a later stage, but not from the other, distinctions in treatment would be justified under paragraph 1). Other examples of such factors that can lead to non-discriminatory differences in treatment will be noted in the discussions of each paragraph.

The operative paragraphs of the Article also use different language to identify the kinds of differences in taxation treatment that will be considered discriminatory. For example, paragraphs 1 and 4 speak of "any taxation or any requirement connected therewith that is more burdensome," while paragraph 2 specifies that a tax "shall not be less favorably levied." Regardless of these differences in language, only differences in tax treatment that materially disadvantage the foreign person relative to the domestic person are properly the subject of the Article.

### *Paragraph 1*

Paragraph 1 provides that a national of one Contracting State may not be subject to taxation or connected requirements in the other Contracting State that are more burdensome than the taxes and connected requirements imposed upon a national of that other State in the same circumstances. The definition of "national" extends beyond citizens to cover juridical persons that are nationals of a Contracting State as well.

A national of a Contracting State is afforded protection under this paragraph even if the national is not a resident of either Contracting State. Thus, a U.S. citizen who is resident in a third country is entitled, under this paragraph, to the same treatment in Denmark as a national of Denmark who is in similar circumstances (i.e., presumably one who is resident in a third State). The term "national" in relation to a Contracting State is defined in subparagraph 1(h) of Article 3 (General Definitions) as any individual possessing the nationality or citizenship of that State and any legal person, partnership, or association deriving its status as such from the laws in force in that State.

Because the relevant circumstances referred to in the paragraph relate, among other things, to taxation on worldwide income, paragraph 1 does not obligate the United States to apply the same taxing regime to a national of Denmark who is not resident in the United States and a U.S. national who is not resident in the United States. United States citizens who are not residents of the United States but who are, nevertheless, subject to United States tax on their worldwide income are not in the same circumstances with respect to United States taxation as citizens of Denmark who are not United States residents. Thus, for example, Article 24 would not entitle a national of Denmark resident in a third country to taxation at graduated rates of U.S. source dividends or other investment income that applies to a U.S. citizen resident in the same third country.

### *Paragraph 2*

Paragraph 2 provides that a Contracting State may not tax a permanent establishment or

fixed base of an enterprise of the other Contracting State less favorably than an enterprise of that first-mentioned State that is carrying on the same activities. This provision, however, does not obligate a Contracting State to grant to a resident of the other Contracting State any tax allowances, reliefs, etc., that it grants to its own residents on account of their civil status or family responsibilities. Thus, if a sole proprietor who is a resident of Denmark has a permanent establishment in the United States, in assessing income tax on the profits attributable to the permanent establishment, the United States is not obligated to allow to the resident of Denmark the personal allowances for himself and his family that he would be permitted to take if the permanent establishment were a sole proprietorship owned and operated by a U.S. resident, despite the fact that the individual income tax rates would apply.

The fact that a U.S. permanent establishment of an enterprise of Denmark is subject to U.S. tax only on income that is attributable to the permanent establishment, while a U.S. corporation engaged in the same activities is taxable on its worldwide income is not, in itself, a sufficient difference to deny national treatment to the permanent establishment. There are cases, however, where the two enterprises would not be similarly situated and differences in treatment may be warranted. For instance, it would not be a violation of the non-discrimination protection of paragraph 2 to require the foreign enterprise to provide information in a reasonable manner that may be different from the information requirements imposed on a resident enterprise, because information may not be as readily available to the Internal Revenue Service from a foreign as from a domestic enterprise. Similarly, it would not be a violation of paragraph 2 to impose penalties on persons who fail to comply with such a requirement (see, e.g., sections 874(a) and 882(c)(2)). Further, a determination that income and expenses have been attributed or allocated to a permanent establishment in conformity with the principles of Article 7 (Business Profits) implies that the attribution or allocation was not discriminatory.

Section 1446 of the Code imposes on any partnership with income that is effectively connected with a U.S. trade or business the obligation to withhold tax on amounts allocable to a foreign partner. In the context of the Convention, this obligation applies with respect to a share of the partnership income of a partner resident in Denmark, and attributable to a U.S. permanent establishment. There is no similar obligation with respect to the distributive shares of U.S. resident partners. It is understood, however, that this distinction is not a form of discrimination within the meaning of paragraph 2 of the Article. No distinction is made between U.S. and non-U.S. partnerships, since the law requires that partnerships of both U.S. and non-U.S. domicile withhold tax in respect of the partnership shares of non-U.S. partners. Furthermore, in distinguishing between U.S. and non-U.S. partners, the requirement to withhold on the non-U.S. but not the U.S. partner's share is not discriminatory taxation, but, like other withholding on nonresident aliens, is merely a reasonable method for the collection of tax from persons who are not continually present in the United States, and as to whom it otherwise may be difficult for the United States to enforce its tax jurisdiction. If tax has been over-withheld, the partner can, as in other cases of over- withholding, file for a refund. (The relationship between paragraph 2 and the imposition of the branch tax is dealt with below in the discussion of paragraph 5.)

Paragraph 2 obligates the host State to provide national treatment not only to permanent establishments of an enterprise of the other Contracting State, but also to other residents of that State that are taxable in the host State on a net basis because they derive income from independent

personal services performed in the host State that is attributable to a fixed base in Denmark. Thus, an individual resident of Denmark who performs independent personal services in the United States, and who is subject to U.S. income tax on the income from those services that is attributable to a fixed base in the United States, is entitled to no less favorable tax treatment in the United States than a U.S. resident engaged in the same kinds of activities. With such a rule in a treaty, the host State cannot tax its own residents on a net basis, but disallow deductions (other than personal allowances, etc.) with respect to the income attributable to the fixed base. Similarly, in accordance with paragraph 5 of Article 6 (Income from Real Property), the situs State would be required to allow deductions to a resident of the other State with respect to income derived from real property located in the situs State to the same extent that deductions are allowed to residents of the situs State with respect to income derived from real property located in the situs State.

### *Paragraph 3*

Paragraph 3 prohibits discrimination in the allowance of deductions. When an enterprise of a Contracting State pays interest, royalties or other disbursements to a resident of the other Contracting State, the first-mentioned Contracting State must allow a deduction for those payments in computing the taxable profits of the enterprise as if the payment had been made under the same conditions to a resident of the first-mentioned Contracting State. An exception to this rule is provided for cases where the provisions of paragraph 1 of Article 9 (Associated Enterprises), paragraph 4 of Article 11 (Interest) or paragraph 4 of Article 12 (Royalties) apply, because in those situations, the related parties have entered into transactions on a non-arm's length basis. This exception would include the denial or deferral of certain interest deductions under Code section 163(j).

The term "other disbursements" is understood to include a reasonable allocation of executive and general administrative expenses, research and development expenses and other expenses incurred for the benefit of a group of related persons that includes the person incurring the expense.

Paragraph 3 also provides that any debts of an enterprise of a Contracting State to a resident of the other Contracting State are deductible in the first-mentioned Contracting State for computing the capital tax of the enterprise under the same conditions as if the debt had been contracted to a resident of the first-mentioned Contracting State. Even though, for general purposes, the Convention covers only income taxes, under paragraph 6 of this Article, the non discrimination provisions apply to all taxes levied in both Contracting States, at all levels of government. Thus, this provision may be relevant for both States. Although Denmark may have eliminated its capital taxes, in the United States such taxes are imposed by some local governments.

### *Paragraph 4*

Paragraph 4 requires that a Contracting State not impose more burdensome taxation or connected requirements on an enterprise of the other Contracting State that is wholly or partly owned or controlled, directly or indirectly, by one or more residents of the other Contracting State, than the taxation or connected requirements that it imposes on other similar enterprises of

that first-mentioned Contracting State. For this purpose it is understood that “similar” refers to similar activities or ownership of the enterprise.

This rule, like all non-discrimination provisions, does not prohibit differing treatment of entities that are in differing circumstances. Rather, a protected enterprise is only required to be treated in the same manner as other enterprises that, from the point of view of the application of the tax law, are in substantially similar circumstances both in law and in fact. The taxation of a distributing corporation under section 367(e) on an applicable distribution to foreign shareholders does not violate paragraph 4 of the Article because a foreign-owned corporation is not similar to a domestically-owned corporation that is accorded non-recognition treatment under sections 337 and 355.

For the reasons given above in connection with the discussion of paragraph 2 of the Article, it is also understood that the provision in section 1446 of the Code for withholding of tax on non-U.S. partners does not violate paragraph 4 of the Article.

It is further understood that the ineligibility of a U.S. corporation with nonresident alien shareholders to make an election to be an “S” corporation does not violate paragraph 4 of the Article. If a corporation elects to be an S corporation (requiring 75 or fewer shareholders), it is generally not subject to income tax and the shareholders take into account their pro rata shares of the corporation's items of income, loss, deduction or credit. (The purpose of the provision is to allow an individual or small group of individuals to conduct business in corporate form while paying taxes at individual rates as if the business were conducted directly.) A nonresident alien does not pay U.S. tax on a net basis, and, thus, does not generally take into account items of loss, deduction or credit. Thus, the S corporation provisions do not exclude corporations with nonresident alien shareholders because such shareholders are foreign, but only because they are not net-basis taxpayers. Similarly, the provisions exclude corporations with other types of shareholders where the purpose of the provisions cannot be fulfilled or their mechanics implemented. For example, corporations with corporate shareholders are excluded because the purpose of the provisions to permit individuals to conduct a business in corporate form at individual tax rates would not be furthered by their inclusion.

#### *Paragraph 5*

Paragraph 5 confirms that no provision of the Article will prevent either Contracting State from imposing the branch tax described in paragraph 8 of Article 10 (Dividends). Since imposition of the branch tax is specifically sanctioned by paragraph 8 of Article 10 (Dividends), its imposition could not be precluded by Article 24, even without paragraph 5. Under the generally accepted rule of construction that the specific takes precedence over the more general, the specific branch tax provision of Article 10 would take precedence over the more general national treatment provision of Article 24.

#### *Paragraph 6*

As noted above, notwithstanding the specification in Article 2 (Taxes Covered) of taxes covered by the Convention for general purposes, for purposes of providing non-discrimination

protection this Article applies to taxes of every kind and description imposed by a Contracting State or a political subdivision or local authority thereof. Customs duties are not considered to be taxes for this purpose.

#### *Relation to Other Articles*

The saving clause of paragraph 4 of Article 1 (General Scope) does not apply to this Article, by virtue of the exceptions in paragraph 5(a) of Article 1. Thus, for example, a U.S. citizen who is a resident of Denmark may claim benefits in the United States under this Article.

Nationals of a Contracting State may claim the benefits of paragraph 1 regardless of whether they are entitled to benefits under Article 22 (Limitation of Benefits), because that paragraph applies to nationals and not residents. They may not claim the benefits of the other paragraphs of this Article with respect to an item of income unless they are generally entitled to treaty benefits with respect to that income under a provision of Article 22.

### ARTICLE 25 Mutual Agreement Procedure

This Article provides the mechanism for taxpayers to bring to the attention of the competent authorities issues and problems that may arise under the Convention. It also provides a mechanism for cooperation between the competent authorities of the Contracting States to resolve disputes and clarify issues that may arise under the Convention and to resolve cases of double taxation not provided for in the Convention. The competent authorities of the two Contracting States are identified in paragraph 1(e) of Article 3 (General Definitions).

#### *Paragraph 1*

This paragraph provides that where a resident of a Contracting State considers that the actions of one or both Contracting States will result in taxation that is not in accordance with the Convention he may present his case to the competent authority of the Contracting State of which he is a resident or national.

Although the typical cases brought under this paragraph will involve economic double taxation arising from transfer pricing adjustments, the scope of this paragraph is not limited to such cases. For example, if the United States treats income derived by a company resident in Denmark as attributable to a permanent establishment in the United States, and the resident believes that the income is not attributable to a permanent establishment, or that no permanent establishment exists, the resident may bring a complaint under paragraph 1 to the competent authority of Denmark.

It is not necessary for a person bringing a complaint first to have exhausted the remedies provided under the national laws of the Contracting States before presenting a case to the competent authorities, nor does the fact that the statute of limitations may have passed for seeking

a refund preclude bringing a case to the competent authority. No time limit is provided within which a case must be brought, and assessment and collection procedures are suspended during the pendency of the mutual agreement proceeding.

### *Paragraph 2*

This paragraph instructs the competent authorities in dealing with cases brought by taxpayers under paragraph 1. It provides that if the competent authority of the Contracting State to which the case is presented judges the case to have merit, and cannot reach a unilateral solution, it shall seek an agreement with the competent authority of the other Contracting State pursuant to which taxation not in accordance with the Convention will be avoided. During the period that a proceeding under this Article is pending, any assessment and collection procedures shall be suspended. Any agreement is to be implemented even if such implementation otherwise would be barred by the statute of limitations or by some other procedural limitation, such as a closing agreement. In a case where the taxpayer has entered a closing agreement (or other written settlement) with the United States prior to bringing a case to the competent authorities, the U.S. competent authority will endeavor only to obtain a correlative adjustment from Denmark. See Rev. Proc. 96-13, 1996-3 I.R.B. 31, section 7.05. Because, as specified in paragraph 2 of Article 1 (General Scope), the Convention cannot operate to increase a taxpayer's liability, time or other procedural limitations can be overridden only for the purpose of making refunds and not to impose additional tax.

### *Paragraph 3*

Paragraph 3 authorizes the competent authorities to resolve difficulties or doubts that may arise as to the application or interpretation of the Convention. The paragraph includes a non-exhaustive list of examples of the kinds of matters about which the competent authorities may reach agreement. This list is purely illustrative; it does not grant any authority that is not implicitly present as a result of the introductory sentence of paragraph 3. The competent authorities may, for example, agree to the same attribution of income, deductions, credits or allowances between an enterprise in one Contracting State and its permanent establishment in the other (subparagraph (a)) or between related persons (subparagraph (b)). These allocations are to be made in accordance with the arm's length principle underlying Article 7 (Business Profits) and Article 9 (Associated Enterprises). Agreements reached under these subparagraphs may include agreement on a methodology for determining an appropriate transfer price, common treatment of a taxpayer's cost sharing arrangement, or upon an acceptable range of results under that methodology. Subparagraph (g) makes clear that they may also agree to apply this methodology and range of results prospectively to future transactions and time periods pursuant to advance pricing agreements.

As indicated in subparagraphs (c), (d), (e) and (f), the competent authorities also may agree to settle a variety of conflicting applications of the Convention. They may agree to characterize particular items of income in the same way (subparagraph (c)), to characterize entities in a particular way (subparagraph (d)), to apply the same source rules to particular items of income (subparagraph (e)), and to adopt a common meaning of a term (subparagraph (f)). Subparagraph (h) makes clear that the competent authorities can agree to the common application,

consistent with the objective of avoiding double taxation, of procedural provisions of the internal laws of the Contracting States, including those regarding penalties, fines and interest.

Since the list under paragraph 3 is not exhaustive, the competent authorities may reach agreement on issues not enumerated in paragraph 3 if necessary to avoid double taxation. For example, the competent authorities may seek agreement on a uniform set of standards for the use of exchange rates, or agree on consistent timing of gain recognition with respect to a transaction to the extent necessary to avoid double taxation. Agreements reached by the competent authorities under paragraph 3 need not conform to the internal law provisions of either Contracting State.

Finally, paragraph 3 authorizes the competent authorities to consult for the purpose of eliminating double taxation in cases not provided for in the Convention and to resolve any difficulties or doubts arising as to the interpretation or application of the Convention. This provision is intended to permit the competent authorities to implement the treaty in particular cases in a manner that is consistent with its expressed general purposes. It permits the competent authorities to deal with cases that are within the spirit of the provisions but that are not specifically covered. An example of such a case might be double taxation arising from a transfer pricing adjustment between two permanent establishments of a third-country resident, one in the United States and one in Denmark. Since no resident of a Contracting State is involved in the case, the Convention does not apply, but the competent authorities nevertheless may use the authority of the Convention to prevent the double taxation.

#### *Paragraph 4*

Paragraph 4 authorizes the competent authorities to increase any dollar amounts referred to in the Convention to reflect economic or monetary developments. Under the Convention, this refers only to Article 17 (Artistes and Sportsmen). The rule under paragraph 4 is intended to operate as follows: if, for example, after the Convention has been in force for some time, inflation rates have been such as to make the \$20,000 exemption threshold for entertainers unrealistically low in terms of the original objectives intended in setting the threshold, the competent authorities may agree to a higher threshold without the need for formal amendment to the treaty and ratification by the Contracting States. This authority can be exercised, however, only to the extent necessary to restore those original objectives. This provision can be applied only to the benefit of taxpayers, i.e., only to increase thresholds, not to reduce them.

#### *Paragraph 5*

Paragraph 5 provides that the competent authorities may communicate with each other for the purpose of reaching an agreement. This makes clear that the competent authorities of the two Contracting States may communicate without going through diplomatic channels. Such communication may be in various forms, including, where appropriate, through face-to-face meetings of the competent authorities or their representatives.

#### *Other Issues*

*Treaty effective dates and termination in relation to competent authority dispute resolution*

A case may be raised by a taxpayer under a treaty with respect to a year for which a treaty was in force after the treaty has been terminated. In such a case the ability of the competent authorities to act is limited. They may not exchange confidential information, nor may they reach a solution that varies from that specified in its law.

A case also may be brought to a competent authority under the Convention with respect to a year when the prior Convention was in force. The scope of the competent authorities to address such a case is not constrained by the fact that the Convention was not in force when the transactions at issue occurred, and the competent authorities have available to them the full range of remedies afforded under this Article to the extent that they exceed those available under the prior Convention.

#### *Triangular competent authority solutions*

International tax cases may involve more than two taxing jurisdictions (e.g., transactions among a parent corporation resident in country A and its subsidiaries resident in countries B and C). As long as there is a complete network of treaties among the three countries, it should be possible, under the full combination of bilateral authorities, for the competent authorities of the three States to work together on a three-sided solution. Although country A may not be able to give information received under Article 26 (Exchange of Information) from country B to the authorities of country C, if the competent authorities of the three countries are working together, it should not be a problem for them to arrange for the authorities of country B to give the necessary information directly to the tax authorities of country C, as well as to those of country A. Each bilateral part of the trilateral solution must, of course, not exceed the scope of the authority of the competent authorities under the relevant bilateral treaty.

#### *Relation to Other Articles*

This Article is not subject to the saving clause of paragraph 4 of Article 1 (General Scope) by virtue of the exceptions in paragraph 5(a) of that Article. Thus, rules, definitions, procedures, etc. that are agreed upon by the competent authorities under this Article may be applied by the United States with respect to its citizens and residents even if they differ from the comparable Code provisions. Similarly, as indicated above, U.S. law may be overridden to provide refunds of tax to a U.S. citizen or resident under this Article. A person may seek relief under Article 25 regardless of whether he is generally entitled to benefits under Article 22 (Limitation on Benefits). As in all other cases, the competent authority is vested with the discretion to decide whether the claim for relief is justified.

## ARTICLE 26 Exchange of Information

### *Paragraph 1*

This Article provides for the exchange of information between the competent authorities

of the Contracting States. The information to be exchanged is that which is relevant for carrying out the provisions of the Convention or the domestic laws of the United States or of Denmark concerning the taxes covered by the Convention. The language differs from that of the OECD Model which refers to information that is "necessary" for carrying out the provisions of the Convention, etc. This term consistently has been interpreted as being equivalent to "relevant," and as not requiring a requesting State to demonstrate that it would be unable to enforce its tax laws unless it obtained a particular item of information. To remove any potentially wrong impression that the term "necessary" created a higher threshold than relevance, the U.S. Model and the Convention adopt the term "relevant."

The taxes covered by the Convention for purposes of this Article constitute a broader category of taxes than those referred to in Article 2 (Taxes Covered). As provided in paragraph 4, for purposes of exchange of information, covered taxes include all taxes imposed by the Contracting States. Exchange of information with respect to domestic law is authorized insofar as the taxation under those domestic laws is not contrary to the Convention. Thus, for example, information may be exchanged with respect to a covered tax, even if the transaction to which the information relates is a purely domestic transaction in the requesting State and, therefore, the exchange is not made for the purpose of carrying out the Convention.

An example of such a case is provided in the OECD Commentary: A company resident in the United States and a company resident in the other Contracting State transact business between themselves through a third-country resident company. Neither Contracting State has a treaty with the third State. In order to enforce their internal laws with respect to transactions of their residents with the third-country company (since there is no relevant treaty in force), the Contracting State may exchange information regarding the prices that their residents paid in their transactions with the third-country resident.

Paragraph 1 states that information exchange is not restricted by Article 1 (General Scope). Accordingly, information may be requested and provided under this Article with respect to persons who are not residents of either Contracting State. For example, if a third-country resident has a permanent establishment in Denmark which engages in transactions with a U.S. enterprise, the United States could request information with respect to that permanent establishment, even though it is not a resident of either Contracting State. Similarly, if a third-country resident maintains a bank account in Denmark, and the Internal Revenue Service has reason to believe that funds in that account should have been reported for U.S. tax purposes but have not been so reported, information can be requested from Denmark with respect to that person's account.

Paragraph 1 also provides assurances that any information exchanged will be treated as secret, subject to the same disclosure constraints as information obtained under the laws of the requesting State. Information received may be disclosed only to persons, including courts and administrative bodies, involved with the assessment, collection, enforcement or prosecution in respect of the taxes to which the information relates, or to persons involved with the administration of these taxes or with the oversight of such activities. The information must be used by these persons in connection with these designated functions. Persons in the United States involved with the oversight of the administration of taxes include legislative bodies, such as the

tax-writing committees of Congress and the General Accounting Office. Information received by these bodies must be for use in the performance of their role in overseeing the administration of U.S. tax laws. Information received may be disclosed in public court proceedings or in judicial decisions.

The Article authorizes the competent authorities to exchange information on a routine basis, on request in relation to a specific case, or spontaneously. It is contemplated that the Contracting States will utilize this authority to engage in all of these forms of information exchange, as appropriate.

#### *Paragraph 2*

Paragraph 2 provides that the obligations undertaken in paragraph 1 to exchange information do not require a Contracting State to carry out administrative measures that are at variance with the laws or administrative practice of either State. Nor is a Contracting State required to supply information not obtainable under the laws or administrative practice of either State, or to disclose trade secrets or other information, the disclosure of which would be contrary to public policy. Thus, a requesting State may be denied information from the other State if the information would be obtained pursuant to procedures or measures that are broader than those available in the requesting State.

While paragraph 2 states conditions under which a Contracting State is not obligated to comply with a request from the other Contracting State for information, the requested State is not precluded from providing such information, and may, at its discretion, do so subject to the limitations of its internal law.

#### *Paragraph 3*

Paragraph 3 sets forth two exceptions from the dispensations described in paragraph 2. First, the first sentence of the paragraph provides that the competent authority has the authority to obtain and provide information held by financial institutions or intermediaries. This includes the disclosure of information regarding the beneficial owner of an interest in a person.

Second, paragraph 3 provides that when information is requested by a Contracting State in accordance with this Article, the other Contracting State is obligated to obtain the requested information as if the tax in question were the tax of the requested State, even if the other Contracting State has no direct tax interest in the case to which the request relates. The OECD Model does not state explicitly in the Article that the requested State is obligated to respond to a request even if it does not have a direct tax interest in the information. The OECD Commentary, however, makes clear that this is to be understood as implicit in the OECD Model.

Paragraph 3 further provides that the requesting State may specify the form in which information is to be provided (e.g., depositions of witnesses and authenticated copies of original documents) so that the information is usable in the judicial proceedings of the requesting State. The requested State should, if possible, provide the information in the form requested to the same extent that it can obtain information in that form under its own laws and administrative practices

with respect to its own taxes.

*Paragraph 4*

As noted above in the discussion of paragraph 1, the exchange of information provisions of the Convention apply to all taxes imposed by a Contracting State, not just to those taxes designated as covered taxes under Article 2 (Taxes Covered). The U.S. competent authority may, therefore, request information for purposes of, for example, estate and gift taxes or federal excise taxes.

*Treaty Effective Dates and Termination in Relation to Information Exchange*

A tax administration may seek information with respect to a year for which a treaty was in force after the treaty has been terminated. In such a case the ability of the other tax administration to act is limited. The treaty no longer provides authority for the tax administrations to exchange confidential information. They may only exchange information pursuant to domestic law.

The competent authority also may seek information under the Convention, but with respect to a year in which the prior Convention was in force. The scope of the competent authorities to address such a case is not constrained by the fact that the prior Convention was in force when the transactions at issue occurred, and the competent authorities have available to them the full range of information exchange provisions afforded under this Article to the extent they exceed those under the prior Convention.

## ARTICLE 27

### Administrative Assistance

*Paragraph 1*

This Article obligates the Contracting States to undertake to lend assistance to each other in the collection of taxes referred to in Article 2 (Taxes Covered), together with interest, costs, additions to such taxes, and civil penalties, which are referred to in the Article as a “revenue claim.” This provision is similar in scope to Article XVIII (Administrative Assistance) of the income tax treaty between the United States and Denmark signed on May 6, 1948. The differences between that treaty and the text of this Convention reflect changes incorporated into the administrative assistance provisions of newer U.S. tax treaties, such as with the Netherlands and with Canada.

*Paragraph 2*

Paragraph 2 requires a Contracting State applying for collection assistance (the “applicant State”) to certify that the revenue claim for which collection assistance is sought has been “finally determined.” Under paragraph 2 a revenue claim has been finally determined when the applicant State has the right under its internal law to collect the revenue claim and all administrative and judicial rights of the taxpayer to restrain collection in the applicant State have lapsed or been

exhausted.

### *Paragraph 3*

Paragraph 3 of the Article clarifies that the Contracting State from which assistance was requested (the “requested State”) has discretion as to whether to accept a particular application for collection assistance. However, if the application for assistance is accepted, paragraph 3 requires that the requested State grant assistance under its existing procedures as though the claim were the requested State’s own revenue claim finally determined under the laws of that State. This obligation under paragraph 3 is limited by paragraph 7 of the Article, which provides that, although generally treated as a revenue claim of the requested State, a claim for which collection assistance is granted shall not have any priority accorded to the revenue claim of the requested State.

### *Paragraph 4*

Paragraph 4 provides that, when the United States accepts a request for assistance in collection, the claim will be treated by the United States as an assessment as of the time the application was received. Similarly, when Denmark accepts a request, a revenue claim shall be treated by Denmark as an assessment under Danish laws against the taxpayer as of the time the application is received.

### *Paragraph 5*

Paragraph 5 provides that nothing in the Article shall be construed as creating in the requested State any rights of administrative or judicial review of the applicant State’s finally determined revenue claim. Thus, when an application for collection assistance has been accepted, the substantive validity of the applicant State’s revenue claim cannot be challenged in an action in the requested State. Paragraph 5 further provides that, if the applicant’s State’s revenue claim ceases to be finally determined, the applicant State is obligated to withdraw promptly any request that had been based on that claim.

### *Paragraph 6*

Paragraph 6 provides that, as a general rule, the requested State is to forward the entire amount collected to the competent authority of the applicant State. The ordinary costs incurred in providing collection assistance will normally be borne by the requested State and only extraordinary costs will be borne by the applicant State. The application of this paragraph, including rules specifying which collection costs are to be borne by each State and the time and manner of payment of the amounts collected, will be agreed upon by the competent authorities, as provided for in paragraph 11.

### *Paragraph 7*

Paragraph 7 provides that a revenue claim of the applicant State accepted for collection shall not have in the requested State any priority accorded to the revenue claims of the requested

State. Thus, in bankruptcy proceedings, such claim would be treated in the same way as the claim of any other unsecured creditor.

*Paragraph 8*

Paragraph 8 provides that no assistance is to be given under this Article for a claim in respect of an individual taxpayer, to the extent that the taxpayer can demonstrate that he was a citizen of the requested State during the taxable period to which the revenue claim relates. Similarly, in the case of a company, estate, or trust, no assistance is to be given to the extent that the entity can demonstrate that it derived its status as such under the laws in force in the requested State during the taxable period to which the claim relates.

*Paragraph 9*

Paragraph 9 provides that each of the Contracting States shall endeavor to collect on behalf of the other Contracting State such amounts as may be necessary to ensure that relief granted by the Convention from taxation imposed by that other State does not inure to the benefit of persons not entitled thereto. For example, if a U.S. source dividend is paid to an addressee in a treaty partner, the withholding agent probably will withhold at the treaty's portfolio dividend rate of 15 percent. If, however, the addressee is merely acting as a nominee on behalf of a third-country resident, paragraph 9 would obligate the other Contracting State to withhold and remit to the United States the additional tax that should have been collected by the U.S. withholding agent.

*Paragraph 10*

Paragraph 10 makes clear that the Contracting State asked to collect the tax is not obligated, in the process of providing collection assistance, to carry out administrative measures that are different from those used in the collection of its own taxes, or that would be contrary to its public policy (ordre public).

*Paragraph 11*

Paragraph 11 requires the competent authorities to agree upon the mode of application of this Article, including agreement to ensure comparable levels of assistance to each of the Contracting States.

*Paragraph 12*

Paragraph 12 provides that the Contracting State asked to collect the tax is not obligated to accede to the request of the applicant State if the applicant State has not pursued all appropriate collection in its own jurisdiction or in those cases where the administrative burden for the requested State is disproportionate to the benefit to be derived by the applicant State.

*Treaty Effective Dates and Termination in Relation to Administrative Assistance*

A tax administration may request administrative assistance with respect to a year for

which a treaty was in force after the treaty has been terminated. In such a case the ability of the other tax administration to act is limited. The treaty no longer provides authority for the tax administrations to provide administrative assistance. They may only provide such assistance pursuant to domestic law.

The competent authority also may seek administrative assistance information under the Convention, but with respect to a year in which the prior Convention was in force. The scope of the competent authorities to address such a case is not constrained by the fact that the prior Convention was in force when the transactions at issue occurred, and the competent authorities have available to them the full range of administrative assistance provisions afforded under this Article to the extent they exceed those under the prior Convention.

## ARTICLE 28

### Diplomatic Agents and Consular Officers

This Article confirms that any fiscal privileges to which diplomatic or consular officials are entitled under general provisions of international law or under special agreements will apply notwithstanding any provisions to the contrary in the Convention. The agreements referred to include any bilateral agreements, such as the Vienna Convention on Diplomatic Relations and the Vienna Convention on Consular Relations. The United States generally adheres to the latter because its terms are consistent with customary international law.

The Article does not independently provide any benefits to diplomatic agents and consular officers. Article 19 (Government Service) does so, as do Code section 893 and a number of bilateral and multilateral agreements. In the event that there is a conflict between the tax treaty and international law or such other treaties, under which the diplomatic agent or consular official is entitled to greater benefits under the latter, the latter laws or agreements shall have precedence. Conversely, if the tax treaty confers a greater benefit than another agreement, the affected person could claim the benefit of the tax treaty.

Pursuant to subparagraph 5(b) of Article 1 (General Scope), the saving clause of paragraph 4 of Article 1 does not apply to override any benefits of this Article available to an individual who is neither a citizen of the United States nor has immigrant status in the United States.

## ARTICLE 29

### Entry into Force

This Article contains the rules for bringing the Convention into force and giving effect to its provisions.

#### *Paragraph 1*

Paragraph 1 provides that each State shall notify the other as soon as its requirements for

entry into force have been complied with.

In the United States, the process leading to ratification and entry into force is as follows: Once a treaty has been signed by authorized representatives of the two Contracting States, the Department of State sends the treaty to the President who formally transmits it to the Senate for its advice and consent to ratification, which requires approval by two-thirds of the Senators present and voting. Prior to this vote, however, it generally has been the practice for the Senate Committee on Foreign Relations to hold hearings on the treaty and make a recommendation regarding its approval to the full Senate. Both Government and private sector witnesses may testify at these hearings. After receiving the Senate's advice and consent to ratification, the treaty is returned to the President for his signature on the ratification document. The President's signature on the document completes the process in the United States.

### *Paragraph 2*

Paragraph 2 provides that the Convention will enter into force on the date on which the second of the two notifications of the completion of requirements for the entry into force of the Convention has been received. The date on which a treaty enters into force is not necessarily the date on which its provisions take effect. Paragraph 2, therefore, also contains rules that determine when the provisions of the treaty will have effect. Under paragraph 2(a), the Convention will have effect with respect to taxes withheld at source (principally dividends, interest and royalties) for amounts paid or credited on or after the first day of the second month following the date on which the Convention enters into force. For example, if the second notification is received on April 25 of a given year, the withholding rates specified in paragraph 2 of Article 10 (Dividends) would be applicable to any dividends paid or credited on or after June 1 of that year. This rule allows the benefits of the withholding reductions to be put into effect without waiting until the following year. The delay of one to two months is required to allow sufficient time for withholding agents to be informed about the change in withholding rates. If for some reason a withholding agent withholds at a higher rate than that provided by the Convention (perhaps because it was not able to re-program its computers before the payment is made), a beneficial owner of the income that is a resident of the other Contracting State may make a claim for refund pursuant to section 1464 of the Code.

For all other taxes, paragraph 2(b) specifies that the Convention will have effect for taxable periods beginning on or after January 1 of the year following entry into force.

As discussed under Articles 25 (Mutual Agreement Procedure), 26 (Exchange of Information) and 27 (Administrative Assistance), the powers afforded the competent authority under these articles apply retroactively to taxable periods preceding entry into force.

### *Paragraph 3*

Paragraph 3 provides that the prior Convention will cease to have effect at the time this Convention takes effect under the provisions of paragraphs 2 and 4 of this Article. The prior Convention shall terminate on the last date on which it has effect in accordance with the

foregoing provisions of this Article.

#### *Paragraph 4*

Paragraph 4 provides a general exception to the effective date rules of paragraph 2. Under this paragraph, if the prior Convention would have afforded any greater relief from tax than this Convention, the prior Convention shall, at the election of any person that was entitled to benefits under the prior Convention, continue to have effect in its entirety for one year after the date on which the provisions of this Convention would otherwise first have had effect under the provisions of paragraph 2 of this Article.

Thus, a taxpayer may elect to extend the benefits of the prior Convention for one year from the date on which the relevant provision of the new Convention would first take effect. For example, suppose the instruments of ratification are exchanged on February 1, 2000 and the Convention thus enters into force on that date. The new Convention would take effect with respect to taxes withheld at source for amounts paid or credited on or after April 1, 2000. If the election is made, the provisions of the prior Convention regarding withholding would continue to have effect for amounts paid or credited at any time prior to April 1, 2001. With regard to assessed taxes, the new Convention would be applicable for fiscal periods beginning on or after January 1, 2001. Therefore, with respect to the branch tax, which is imposed on an assessment basis, an election would allow the prior Convention to continue, thus preventing the imposition of the branch tax until the first taxable year beginning on or after January 1, 2002.

#### *Paragraph 5*

Paragraph 5 provides that the prior Convention terminates on the last date on which it has effect in accordance with the foregoing provisions of this Article.

### Article 30 Termination

The Convention is to remain in effect indefinitely, unless terminated by one of the Contracting States in accordance with the provisions of Article 30. The Convention may be terminated by giving notice of termination through diplomatic channels at any time after the year in which the Convention enters into force. If notice of termination is given, the provisions of the Convention with respect to withholding at source will cease to have effect for amounts paid or credited after the expiration of a period of six months beginning with the delivery of notice of termination. For other taxes, the Convention will cease to have effect as of taxable periods beginning after the expiration of this six month period.

A treaty performs certain specific and necessary functions regarding information exchange and mutual agreement. In the case of information exchange the treaty's function is to override confidentiality rules relating to taxpayer information. In the case of mutual agreement its function is to allow competent authorities to modify internal law in order to prevent double taxation and

tax avoidance. With respect to the effective termination dates for these aspects of the treaty, therefore, if a treaty is terminated as of January 1 of a given year, no otherwise confidential information can be exchanged after that date, regardless of whether the treaty was in force for the taxable year to which the request relates. Similarly, no mutual agreement departing from internal law can be implemented after that date, regardless of the taxable year to which the agreement relates. Therefore, for the competent authorities to be allowed to exchange otherwise confidential information or to reach a mutual agreement that departs from internal law, a treaty must be in force at the time those actions are taken and any existing competent authority agreement ceases to apply.

Article 30 relates only to unilateral termination of the Convention by a Contracting State. Nothing in this Article should be construed as preventing the Contracting States from concluding a new bilateral agreement, subject to ratification, that supersedes, amends or terminates provisions of the Convention without the six-month notification period.

Customary international law observed by the United States and other countries, as reflected in the Vienna Convention on Treaties, allows termination by one Contracting State at any time in the event of a "material breach" of the agreement by the other Contracting State.

# **Exhibit 42**

## **BENEFICIAL OWNERSHIP: AFTER *INDOFOOD***

**by Philip Baker**

What does the term “beneficial owner” mean in a tax treaty? In principle, we ought to know exactly what it means. The term has been used in tax treaties since the 1940s; it is in the OECD and UN and US Models; it is found in virtually every tax treaty which the United Kingdom has entered into. Curiously, we have had very little guidance as to the meaning of the term until a recent Court of Appeal decision in the case of *Indofood International Finance Ltd v. JP Morgan Chase Bank NA*<sup>1</sup>.

The term “beneficial owner” is usually found in the dividend, interest and, sometimes, the royalties article of a tax treaty. These articles generally provide for a reduced level of withholding tax on the relevant category of income: however, the reduced tax is only available if the beneficial owner of the dividends, interest or royalties is a resident of the state which is a party to the treaty. Hence, the beneficial ownership limitations – or “BO limitation” to its friends – is a restriction on the availability of the reduced tax rate.

It is pretty clear that the BO limitation was introduced to counter treaty shopping by the channelling of the relevant income through a resident of a state with a suitably attractive treaty provision. The issue for some time has been, however, exactly how broad is the scope of the BO limitation. Put another way, how artificial

must the conduit arrangement have been for the benefit of the treaty to be denied?

At one extreme, one can imagine situations where simply by registering shares or loan notes in the name of a nominee who was resident in a treaty state, one might try to claim the benefit of the relevant treaty. At the other end of the spectrum, all companies ultimately distribute the income they receive to shareholders or other stakeholders: if a company were to be denied the benefit of a treaty because the income received might ultimately be paid on to a third party, then when would any company or collective investment vehicle ever be entitled to the benefit of the three central provisions of most tax treaties?

Surprisingly, there has been virtually no case law on the meaning of beneficial ownership until the *Indofood* case. There was a Dutch case a few years ago where a UK company acquired a usufruct to receive the dividends on certain Dutch shares: the Amsterdam Court held that a person who is entitled to a usufruct over the dividends only was not the beneficial owner, but the Hoge Raad correctly reversed this by holding that the mere fact that the company had an entitlement only to the dividends and not to the corpus of the shares themselves did not prevent it from being a beneficial owner. There has been a more recent Swiss case<sup>2</sup> where the treaty benefit was denied on the grounds that the taxpayer had failed to prove that it was the beneficial owner. More tantalising, ten years or so ago a case was being prepared for trial before the UK Special

Commissioners concerning a Luxembourg bank in liquidation: was the bank still the beneficial owner of interest it received from the United Kingdom? Sadly, the case was settled before it went for trial.

There is Commentary from the OECD on the meaning of beneficial ownership. This has developed over the years. The original Commentary to Articles 10 and 11 of the OECD Model referred to the exclusion of agents or nominees who were interposed in an attempt to obtain treaty benefits. Following the Conduit Companies Report<sup>3</sup> the Commentary was extended to include conduits which had such narrow powers over the income they received that they were in the position of mere fiduciaries with regard to that income. This seemed, in fact, to be as far as the OECD could achieve consensus on the meaning of beneficial ownership. And a very sensible point it was too: it meant that the BO limitation excluded very obvious cases of treaty shopping, but went no further. States that wished to go further than this in deterring treaty shopping could – and did – include more elaborate anti-treaty shopping provisions in specific treaties. If one looks, for example, at the anti-conduit provisions of the current UK/US Tax Treaty, they provide strong evidence that the BO limitation is of relatively narrow scope, and that the treaty partners (or at least one of them) wanted a broader anti-treaty shopping provision.

The OECD Commentary, with its emphasis on agents, nominees and conduit companies acting as mere fiduciaries, provided a fairly useful rule of thumb for

determining beneficial ownership. If the recipient entity went into liquidation, and it was a mere fiduciary, then any dividends etc., it had received could be claimed by the “real beneficial owner” and would not be available for general creditors in the liquidation. If, however, the dividends etc., really belonged to the entity in liquidation, then the income would be available for its general creditors and it would have been the beneficial owner of that income itself.

As explained, since March 2006 we do have a Court of Appeal case on the meaning of beneficial ownership, though some would doubt whether it has done much to clarify our understanding of the meaning of the term.

For a case which has sought to clarify one of the key expressions used in international taxation, what is surprising is that it was not technically a tax case. It was a civil case brought between the two parties to a loan agreement. The background is relatively complicated, but can be simplified. An Indonesian company wished to raise a loan for business purposes: if it had done so directly, there would have been a 20% withholding tax on the interest it paid. Instead of raising the loan directly, it established a Mauritius subsidiary which then issued the loan, with JP Morgan acting as trustee for the bondholders. Interest paid from Indonesia to Mauritius benefited from the Indonesia-Mauritius Tax Treaty, with a reduced withholding tax of 10%. Interest paid from Mauritius for the benefit of the bondholders was not subject to any withholding tax.

*February 2007**Beneficial Ownership After Indofood*

The precise terms of the arrangement with the Mauritius finance subsidiary were important. The identical amount of money was borrowed by the Mauritian company as was then lent on to the Indonesian parent: the rate of interest on the loan to and from Mauritius was identical. The terms of the documentation provided for interest to be paid by the Indonesian parent to the Mauritian subsidiary on day 1, and from the Mauritian subsidiary to the trustee for the bondholders on day 2: in fact, it was found as a fact that the interest was paid directly from the Indonesian parent to the trustee for the bondholders, missing out the Mauritian subsidiary. According to the Court of Appeal, the terms of the loan documentation precluded the Mauritian subsidiary from meeting its interest obligations to the bondholders from any source other than interest paid by its Indonesia parent<sup>4</sup>, thus the Court of Appeal seems to have considered that both in practice and according to the documentation, the Mauritian subsidiary was effectively obliged to pay on every dollar received from its Indonesian parent to the bondholders: none of the interest received could be retained by the Mauritian subsidiary.

Then the Indonesia-Mauritius Tax Treaty was terminated.

The termination of the Treaty would have meant that the tax to be withheld on the interest from the Indonesian parent reverted to the normal domestic rate of 20%. However, the loan documentation contained a provision that, if the tax rate on the interest was

increased, the payer had to gross up the amount paid so that, net of the higher tax, the bondholders received the same return as previously. Because this put a heavy burden on the borrower, it had the option, *if there were no reasonable steps it could take to revert to the reduced withholding tax*, to repay the loan early.

Now one comes to the final nub of the *Indofood* case: the Indonesian borrower said that there were no reasonable steps it could take to maintain the low withholding tax, so it should be allowed to repay the loan early. By contrast, JP Morgan, acting for the bondholders, said that there was a very reasonable step which could be taken; that the Indonesian borrower should take this step; and there was no reason to repay the loan early. Pretty obviously, the interest rates available had changed so that it was attractive to the borrower to repay early and refinance, while JP Morgan, acting for the bondholders, wanted the loan to remain in place.

The simple solution proposed was to interpose a Dutch entity between the Indonesian borrower and the Mauritius entity and get the benefit of the Indonesia-Netherlands Tax Treaty, which also had a 10% reduced withholding tax (or even the possibility of a zero withholding tax).

Two arguments were raised to show that the proposed Dutch company would simply not work: that it would not be the beneficial owner of the interest; and that it would not be a resident of the Netherlands for treaty purposes. If either of these could be shown to be

February 2007

*Beneficial Ownership After Indofood*

correct, then the proposed Dutch company would simply not achieve the reduced withholding tax, and a measure which was doomed to failure could not be a reasonable measure to take.

Technically, the question was whether the Dutch company would be entitled to the reduced withholding tax under the Indonesia-Netherlands Tax Treaty. This was essentially a question of how the Indonesian Revenue would respond to the Dutch company – would they regard it as the beneficial owner – and, if they rejected a treaty application, how would the Indonesian Courts respond? Technically, therefore, the issue was one of Indonesian law and practice. The litigation came to London, however, because the loan agreements had a choice of jurisdiction clause which gave jurisdiction to the English High Court.

At first instance, Evan-Lombes J held that, if the Mauritian company had been the beneficial owner of the interest, so would the interposed Dutch company. Of course, there is a very simple answer to this: maybe the Mauritian company should not have been regarded as the beneficial owner in the first place.

The Court of Appeal reversed the first instance judgment. Unanimously, they considered that the proposed Dutch company would not be the beneficial owner of the interest. This meant that, for the first time, an English court had to provide a definition of the term “beneficial owner” in a tax treaty. Unfortunately, the way they did so has provided little clarity to the meaning of the term.

Two important points should be made about the Court of Appeal. First, none of the judges, and none of the counsel involved in the case, was an expert in taxation, let alone in international taxation. It is, in many respects, one of the most bizarre features of this case that a key issue concerning the meaning of a term used in multiple tax treaties was decided without any representation from a revenue authority and without the participation of anyone with any expertise in international tax before the Court of Appeal.

Secondly, as a technical matter, the Court of Appeal had only to decide whether the interposition of the Dutch company was a reasonable measure for the borrower to follow. It might have been sufficient simply to state that the Indonesian Revenue had gone on record that they would not regard such an interposed company as the beneficial owner: litigation in Indonesia was certain to follow if the proposed route was adopted, and one imagines that a route that was certain to lead to difficult litigation could hardly be a reasonable measure. That was not, however, the short cut route which the Court of Appeal adopted. Rather, the Court decided to face squarely the question of the meaning of beneficial ownership.

One of the great fears of international tax lawyers has been for many years that a question concerning beneficial ownership would come before a court in a common law country with little or no expertise in international tax. The fear was that the judges would recognise the term “beneficial ownership” from their

*February 2007**Beneficial Ownership After Indofood*

knowledge of equity and the law of trusts, and would assume that the term had the meaning under the common law system with which they were familiar: that is, that there was a distinction between legal ownership and beneficial ownership. The meaning of the term would then be muddled up with the distinction between the separate ownership interest of the trustee and his beneficiary under a trust. Not only would the resulting meaning lead to unintended consequences for trustees seeking to claim the benefit of tax treaties, but it would also lead to a meaning of the term “beneficial ownership” which non-common law countries would have difficulty in following.

At the end of the day, the term “beneficial ownership” is used in multiple treaties entered into between countries with common law systems and countries which have continental European civil law systems, or other systems that have totally different historical origins. What the term needed was a “international fiscal meaning” rather than a meaning that depended on the domestic law of the country where the issue arose<sup>5</sup>.

If one were to applaud any point in the Court of Appeal’s judgment, it is that the Court decided that the term “beneficial owner” should not take a meaning according to the domestic law of the United Kingdom, but that it should have an “international fiscal meaning”. This is understood to mean that the Court thought it should have a meaning which would be the same in all countries, and not vary from one country to another.

The question was how to find this international fiscal meaning. Here, there are some good things and bad things about the judgment. The good things are that the Court of Appeal referred to the OECD Commentary and appeared to endorse that Commentary as giving the international fiscal meaning. The bad elements were some unfortunate references to statements from the Director General of Income Tax in Indonesia to the effect that it meant “the full privilege to directly benefit from the income”. That phrase gives little, if any, clarification to the meaning of the term. Also rather less helpful were statements by the Court of Appeal that a technical and legal approach to beneficial ownership should not be adopted, but regard should be had to “the substance of the matter”. Often in cross-border arrangements, great care is taken on the technical and legal aspects – a broad brush, substance approach was bound to lead to uncertainty.

At the end of the day, and on the basis of the facts of the case (and it is very important to recall that this was decided on the facts of the particular case) the proposed Dutch company would not have been the beneficial owner of the interest. On that basis, therefore, the proposed solution would not work, and it was not reasonable to require the borrower to go down a route that would not work.

Where does this all take us to?

If one observed the flurry of activity in the City of London after the judgment came out, one might have concluded that this was some earth-shaking revelation

*February 2007**Beneficial Ownership After Indofood*

which no-one could have foreseen. If one draws back for a moment, however, and looks at the facts of the case, can one really be surprised at the outcome? Recall: the Mauritian company borrowed the identical amount that it on-lent, at the same interest at which it on-lent, and the Court of Appeal found as a fact that the Mauritian company could do nothing with the interest it received but use it to pay the identical amount of interest that it had to pay on. In this type of egregious circumstance, is there any real surprise that the Dutch company which was proposed to take the place of the Mauritian company would not have been the beneficial owner? If beneficial ownership had any meaning at all, surely it would exclude the type of interposed entity which had no function whatsoever but to receive income and pay on the identical amount of income: in fact, it had so little function that, according to the Court of Appeal, the actual flows of money missed it out completely.

The biggest difficulty with the case is not that it confirms that the proposed Dutch company would not have been the beneficial owner. The real difficulty is how far the judgment extends: what other arrangements would be held to fall foul of the BO limitation?

In principle, therefore, the case itself should have had a relatively limited impact. In practice, nervous advisers have worried that it may have much broader implication, and call in question existing financial structures.

At the time of writing this short note, discussions between City law firms, the Law Society and HM

Revenue & Customs has led to the publication of draft guidance by HMRC on the impact of the *Indofood* case. The guidance seems to have been prompted by a desire to reassure the City that many existing structures would not be subject to any adverse scrutiny as a result of the case. However, it is fair to say that the approach adopted by HMRC to reach this comforting result is not particularly appealing from an intellectual point of view.

Many of the City law firms seem to have tried to bury the *Indofood* case by arguing that it was concerned with a finding of fact as to the possible outcome of a claim for treaty benefit in Indonesia, and had nothing to do with UK tax law. Technically, this may be correct. However, as a practical matter, the decision is clearly of broader import. Once the Court of Appeal accepted that the term “beneficial ownership” should have an international fiscal meaning, there was no reason why that meaning should not equally apply if similar facts arose with regard to the United Kingdom. At the very least, there is strong persuasive authority from the Court of Appeal as to the meaning they would give to this phrase.

HMRC, in its guidance, accepts that the Court of Appeal has provided guidance as to the meaning of the phrase in UK law (and not simply in Indonesia). However, they emphasise that this meaning should be seen in the context of the object and purpose of a treaty: the object and purpose includes combating international tax avoidance through treaty shopping. The guidance suggests, therefore, that the phrase only has its

international fiscal meaning when treaty shopping is intended, but does not have its international fiscal meaning when there is no treaty shopping intention. Intellectually, this is a very unattractive position to take, and it is hard to see any legal support for this approach. The approach allows HMRC, however, to identify a number of accepted commercial arrangements which, provided there is no treaty shopping intended, will not be denied treaty benefits on the grounds that the international fiscal meaning of beneficial ownership should be applied.

Whether this draft guidance becomes a final text remains to be seen.

In the meantime, the somewhat unusual circumstances of the *Indofood* case have provided us with the first real discussion of the meaning of beneficial ownership around the world. Whether one is any the wiser after this decision, remains to be seen.

# Clarification of the Meaning of “Beneficial Owner” in the OECD Model Tax Convention – Comment on the April 2011 Discussion Draft

**In April 2011, the OECD released an important discussion draft that is intended to clarify the meaning of the term “beneficial ownership” under articles 10, 11 and 12 of the OECD Model (2010). This article discusses these proposals and demonstrates that some refinement is necessary.**

## 1. Introduction

The “beneficial ownership” requirement was introduced into articles 10 (Dividends), 11 (Interest) and 12 (Royalties) of the OECD Model (1977)<sup>1</sup> to deal with a specific form of abuse affecting the source state, i.e. the transfer of treaty-favoured income to residents of a third state. Where an entity is interposed in the residence state, this transfer may take place through the payment of deductible expenses (“stepping stone strategy”) or a subsequent dividend distribution (“direct conduit strategy”).<sup>2</sup>

The Commentary on Article 10 of the OECD Model (1977) (“Commentary” or “Commentaries”, in general, as appropriate), however, contained very little information on the interpretation of this fundamental requirement. It simply stated that:<sup>3</sup>

Under paragraph 2 [of Art. 10 (dividends) and 11 (interest) and 1 of Art. 12 (royalties)], the limitation of tax in the state of source is not available when an intermediary, such as an agent or nominee, is interposed between the beneficiary and the payer, unless the beneficial owner is a resident of the other Contracting State.

Yet, as a result of reports published by the OECD in 1987<sup>4</sup> and 2002,<sup>5</sup> the Commentary on Article 10 of the OECD Model (2003) further clarified the meaning of beneficial ownership as follows:<sup>6</sup>

The term “beneficial owner” is not used in a narrow technical sense, rather, it should be understood in its context and in light of the object and purposes of the Convention, including avoiding double taxation and the prevention of fiscal evasion and avoidance.

and:<sup>7</sup>

Where an item of income is received by a resident of a Contracting State acting in the capacity of agent or nominee it would be inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption merely on account of the status of the immediate recipient of the income as a resident of the other Contracting State ... It would be equally inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption where a resident of a Contracting State, otherwise than through an agency or nominee relationship, simply acts as a conduit for another person who in fact receives the benefit of the income concerned. For these reasons, the report from the Committee on Fiscal Affairs

entitled “Double Taxation Conventions and the Use of Conduit Companies” concludes that a conduit company cannot normally be regarded as the beneficial owner if, though the formal owner, it has, as a practical matter, very narrow powers which render it, in relation to the income concerned, a mere fiduciary or administrator acting on account of the interested parties.

Finally, the Commentary on Article 1 of the OECD Model (2010) now contains guidance on the application of the beneficial ownership requirement to collective investment vehicles:<sup>8</sup>

Accordingly, a vehicle that meets the definition of a widely-held CIV will also be treated as the beneficial owner of the dividends and interest that it receives, so long as the managers of the CIV have discretionary powers to manage the assets generating such income (unless an individual who is a resident of that State who would have received the income in the same circumstances would not have been considered to be the beneficial owner thereof).

It is, therefore, fair to say that the current Commentary provides a fairly comprehensive discussion of the beneficial ownership requirement. Yet, the appropriate meaning to be given to this term still remains one of the most debated questions of international tax law. In fact, scholarly writing on this subject has become so important that it can no longer be enumerated. In recent years, the increasing number of court decisions given in the OECD Member countries<sup>9</sup> has also continued to fuel the controversy. Whilst these court decisions, in particular, *Indofood International Finance Limited v. JPMorgan Chase*

*Bank NA* (2006),<sup>10</sup> and *Prévost Car Inc. v. Her Majesty the Queen* (2008) and (2009),<sup>11</sup> shed some light on important issues, they also confirm that the essential components of beneficial ownership remain, ultimately, difficult to grasp.

Working Party I of the OECD Committee on Fiscal Affairs, therefore, decided to submit proposals designed to clarify the interpretation that should be given to the beneficial ownership requirement under the Commentaries. These proposals, which take the form of a discussion draft released in April 2011,<sup>12</sup> deal with fundamental issues, such as the nature (*see* section 2.) and the content (*see* section 3.) of the beneficial ownership requirement, its application to trusts (*see* section 4.) and, finally, its relationship to other anti-abuse rules (*see* section 5.).

The purpose of this article is not to revisit the beneficial ownership requirement,<sup>13</sup> but, rather, to formulate certain critical comments with regard to the approach adopted by the OECD in this discussion draft. Whilst the discussion draft is a welcome development, several of the proposals presented should, in the author's opinion, be refined, in particular, to be consistent with the work produced so far by the OECD in this area.

## 2. Nature of the Beneficial Ownership Requirement

### 2.1. Introductory remarks

The first, and now well-known, interpretative question arising with regard to the beneficial ownership requirement is whether this term should be defined by reference to the domestic tax law of the source state or whether it should be given a contextual meaning under article 3(2) of the OECD Model (2010). Currently, it is widely accepted by scholars that a contextual interpretation should prevail.<sup>14</sup> Commentators have, in particular, argued that the first and foremost reason why the term cannot be construed by reference to the domestic law of the source state stems from the fact that none of the national systems of the OECD Member countries offer a precise definition of "beneficial owner" or "*bénéficiaire effectif*". The need to adopt a uniform contextual meaning also flows from the fact that the "beneficial ownership" test determines the availability of treaty benefits and the allocation of taxing rights amongst the contracting states. Accordingly, it is definitely not the intention of the OECD Member countries to allow situations where double taxation arises due to diverging positions taken on who the beneficial owner is. Whilst court decisions and the practice of OECD Member countries are not always clear on this point, the UK Court of Appeal also endorsed this approach in *Indofood* in holding that beneficial ownership, "is to be given an international fiscal meaning not derived from the domestic laws of the contracting States".<sup>15</sup> Further, there is little doubt, to date, that the contextual approach is favoured by the Commentary (2003), which states that beneficial ownership should be "understood in its context and in light of the object and purposes of the Convention".<sup>16</sup>

### 2.2. Discussion draft

In this context, therefore, the new language proposed by the OECD discussion draft comes as a surprise. The discussion draft, indeed, states that the contextual interpretation of the term:<sup>17</sup>

... does not mean, however, that the domestic law meaning of "beneficial owner" is automatically irrelevant for the interpretation of that term in the context of the Article: that domestic law meaning is applicable to the extent that it is consistent with the general guidance included in this Commentary.

On this point, the discussion draft presumably seeks to achieve some sort of compromise. The domestic law of the source state would apply, but this would have to be tested against the contextual meaning proposed by the Commentary.

### 2.3. Comments: contextual meaning should prevail

In the author's view, this language is unfortunate. First, from a dogmatic point of view, if the contextual interpretation is subscribed to, the meaning of beneficial ownership must exclusively be derived from the relevant tax treaty by closely following article 31 et seq. of the Vienna Convention on the Law of Treaties (1969).<sup>18</sup> Second, from a practical point of view, this language is difficult to reconcile with the objective of the proposed amendments to the Commentaries on Articles 10, 11 and 12 of the OECD Model, which, as stated in the introduction to the discussion draft, are designed to avoid, "risks of double taxation and non-taxation arising from these different interpretations".<sup>19</sup> Clearly opening the door to a domestic law characterization of beneficial ownership exacerbates the risk of diverging interpretations and double taxation that the OECD wants to avoid. Last but not least, recently, it has been the intention of the OECD to clarify the application of the beneficial ownership requirement in respect of complex arrangements, such as collective investment vehicles and trusts. In the author's opinion, putting this ambitious objective into effect undoubtedly requires a uniform definition of beneficial ownership that leaves no ambiguity, whatsoever, as to the autonomous nature of

this term. The author would, therefore, recommend not including the proposed language in the Commentaries.

### 3. General Definition of Beneficial Ownership

#### 3.1. Discussion draft

For the first time, the OECD has attempted to propose a general definition of beneficial ownership. According to the discussion draft:<sup>20</sup>

The recipient of a dividend is the "beneficial owner" of that dividend where he has the full right to use and enjoy the dividend unconstrained by a contractual or legal obligation to pass the payment received to another person. Such an obligation will normally derive from relevant legal documents but may also be found to exist on the basis of facts and circumstances showing that, in substance, the recipient clearly does not have the full right to use and enjoy the dividend; also, the use and enjoyment of a dividend must be distinguished from the legal ownership, as well as the use and enjoyment, of the shares on which the dividend is paid.

The discussion draft also clarifies that beneficial and ultimate beneficial ownership are not to be equated. According to the discussion draft:<sup>21</sup>

Since, in the context of Article 10, the term beneficial owner is intended to address difficulties arising from the use of the word "paid" in relation to dividends, it would be inappropriate to consider a meaning developed in order to refer to the individuals who exercise "ultimate effective control over a legal person or arrangement".

If preferred, an entity to which the income is paid may well be regarded as the beneficial owner, even if other persons (typically shareholders) exercise "ultimate effective control" over the entity.

#### 3.2. Comment: control should be preferred over enjoyment

The definition proposed by the discussion draft should be approved for a number of reasons. First, it confirms that the "beneficial ownership" requirement is a test that focuses exclusively on ownership attributes of the recipient of the income. The terms "beneficial" and "*effectif*" also confirm that these ownership attributes must be tested on the basis of a substance-over-form approach. On the other hand, it follows that, subject to the requirements in article 4 of the OECD Model, the nature of the recipient's connection with the residence state is immaterial for the purpose of the beneficial ownership requirement. Whether, for example, the recipient of the income carries on a commercial activity, is a stock listed company or simply a pure passive holding company, is of no importance. From this perspective, the beneficial ownership requirement is conceptually different from an active trade and business or "stock exchange" test. These tests attempt to detect abuse by scrutinizing the connections with the residence state. Beneficial ownership, on the other hand, looks at the intensity of the ownership attributes enjoyed by the recipient over the item of income. A definition of beneficial ownership that implies a substance requirement (personnel, offices, etc.) is, therefore, not compatible with the literal interpretation of this term. Similarly, the tax status of the recipient (ordinary taxation, objective or subjective exemption) is equally not relevant.

In addition, the definition proposed by the discussion draft correctly makes it clear that the OECD Model only refers to the beneficial owner of an item of income. Accordingly, whether or not the recipient of the income is also the owner of the underlying asset is not decisive.

The distinction made by the discussion draft between beneficial and ultimate ownership is also to be endorsed. As demonstrated by *Prévost*, in a group structure, it is perfectly conceivable for an intermediary holding company to satisfy the beneficial ownership requirement.

This said, the emphasis placed by the discussion draft on the ability of the recipient to have "the full right to use and enjoy" the income received is misleading. First, a teleological interpretation dictates, in the author's view, that beneficial ownership focus primarily on the level of economic control exercised by the recipient over the income received. Indeed, the crucial element of a treaty shopping structure is the legal, economic or factual ability of a person of a third country to compel an entity interposed in the residence state to transfer to the former the income received from the source state. Accordingly, it must be recognized that, where the entity of the residence state genuinely holds the power to control the attribution of the income it derives from the source state, it would be difficult to allege that it was interposed by a treaty shopper, as this person is then no longer in a position to secure the transfer of the income in its favour. In contrast, the fact that the recipient may, through the exercise of this power, economically benefit from the item received is not per se the element that conclusively prevents treaty shopping schemes from being implemented. Being superfluous, this element should, therefore, not be taken into account for the purpose of defining beneficial ownership.

Second, as is demonstrated in section 4., a definition of beneficial ownership focusing on the enjoyment of income is not consistent with the approach taken by the discussion draft with regard to trusts. The discussion draft recognizes that the trustees of a discretionary trust may, under certain conditions, be regarded as the beneficial owners of the income they derive. However, this position is only sustainable if the focus is on the level of control enjoyed by the recipient as, essentially, the trustees of a trust never avail themselves of any economic enjoyment over the trust income.

Accordingly, under the interpretation that the author advocates, the beneficial owner under articles 10, 11 and 12 of the OECD Model should refer to "the person who legally, economically or factually has the power to control the attribution of the income".<sup>22</sup> This definition, which excludes agents, nominees and conduit companies with limited powers in stepping stone or direct conduit structures, is very much in line with the position taken by the Commentary (2010), which places great importance on "discretionary powers to manage the assets generat-

20. Para. 12.4 *Proposed OECD Model: Commentaries on Articles 10, 11 and 12*.

21. Para. 12.6 *Proposed OECD Model: Commentaries on Articles 10, 11 and 12*.

22. Danon, *Switzerland's Direct and International Taxation of Private Express Trusts*, *supra* n. 13, at 340.

ing” the income. As observed by a paper released by the OECD, “under this test, a conduit company therefore fails because it normally does not have the ability to vary either its investments or its obligations”.<sup>23</sup>

### 3.3. Comment: what about fiscal attribution without ownership attributes?

In the author’s opinion, there is little doubt that beneficial ownership should be clearly distinguished from the “personal attribution of income requirement” embodied in the OECD Model. Together with others, the author has argued that this personal attribution of income requirement is expressed by terms such as “paid to” or “derived by” contained in the distributive rules. Under the interpretation that the author advocates and following the general recommendation of the Partnership Report (OECD 1999),<sup>24,25</sup> income arising in the source state can be regarded as “paid to” a recipient in the residence state if, under its own fiscal attribution rules, the latter state allocates this item to that person.<sup>26</sup> The beneficial ownership requirement, therefore, cannot simply be regarded as a clarification of, or be equated to, the personal attribution of income requirement. If that were true, the beneficial ownership requirement would have no scope of its own.

Yet, in this context, situations in which income is fictitiously attributed to (and taxed in the hands of) a person without this person holding any ownership attribute over the item received is problematic. Where such a deemed attribution rule is applied by the residence state, income may well be regarded as paid to the recipient within the meaning of the distributive rules, but, strictly speaking, this person may not be regarded as the beneficial owner of the income. At the same time, however, there is no abuse, as the income arising in the source state is not transferred to a non-resident.

The discussion draft does not address this issue. Rather, it assumes that, in non-abusive situations, the person to whom income is fiscally attributed always holds some sort of ownership attributes over this item. This is, however, not always true, as, for various policy reasons, a state may choose to adopt attribution rules that completely deviate from any form of ownership.

In the author’s view, it would be appropriate for the Commentary to refer to this problem and possibly to suggest that, where, under a deemed attribution rule, the recipient is taxed on an item of income arising in the source state, the contracting states may deem this person to be the beneficial owner, even if, in this particular instance, this person does not hold any ownership attribute over the income received. In this circumstance, this common agreed meaning would prevail<sup>27</sup> over the general definition of beneficial ownership based on the control criterion.

## 4. Beneficial Ownership and Trusts

### 4.1. Discussion draft

In the discussion draft, the OECD, for the first time, directly attempts to address one of the most controversial questions relating to the beneficial ownership requirement, namely its application to trusts. In a footnote, the discussion draft, relying on a definition of beneficial ownership that does not coincide with that adopted under the common law, states that:<sup>28</sup>

For example, where the trustees of a discretionary trust do not distribute dividends earned during a given period, these trustees, acting in their capacity as such (or the trust, if recognised as a separate taxpayer), could constitute the beneficial owners of such income for the purposes of Article 10 notwithstanding that the relevant trust law might distinguish between legal and beneficial ownership.

### 4.2. Comment: the adoption of distinct commentaries on trusts

In regard to this point, the position adopted by the discussion draft should be fully endorsed, as it is consistent with a definition of beneficial ownership based on the level of control enjoyed by the recipient. Under this definition, therefore, the trustees of a fixed trust, who have an obligation to distribute trust income, as it arises, to ascertained beneficiaries, do not satisfy the beneficial ownership requirement. Rather, in regard to such a trust, this requirement is normally satisfied by the beneficiaries.

Having said this, it is unfortunate that the discussion draft has chosen to address such an important issue in a mere footnote. In the author’s opinion, the OECD should, rather, seriously consider amending the Commentary on Article 1 with a view to incorporating in it a separate section dealing with the application of the OECD Model to trusts. This addition would not only be consistent with the adoption of the Commentaries relating to partnerships (2000) and collective investment vehicles (2010), but could also greatly rely on the recommendations proposed in these two areas.

23. *Report of the Informal Consultative Group on the Taxation of Collective Investment Vehicles and Procedures for Tax Relief for Cross-Border Investors (ICG) on the Granting of Treaty Benefits with respect to the Income of Collective Investment Vehicles, Annex 1: Background Regarding the Meaning of “Beneficial Owner” in Tax Treaties* N3 (12 Jan. 2009), available at <http://www.oecd.org/dataoecd/34/26/41974553.pdf>.

24. OECD, *The Application of the OECD Model Tax Convention to Partnerships* (OECD: 1999), Intl. Orgs.’ Docn. IBFD.

25. *OECD Model Tax Convention on Income and on Capital: Commentary on Article 1* para. 6.3. (29. Apr. 2000).

26. A decisive systematic argument, which, in the author’s view, supports this approach, relates to the relationship that exists between the distributive rules and the personal scope of tax treaties. Tax treaties only apply, “to persons who are residents of one or more or both of the Contracting States” (art. 1). As treaties concluded in the field of taxation are being considered here, it is a logical conclusion that this principle implies that tax treaties only have effect within the limits of the taxing jurisdiction (or fiscal sovereignty) of the contracting states. It can, therefore, be maintained that the application of a tax treaty requires the income covered by the relevant distributive rule to enter into the taxing jurisdiction of the other contracting state. Under this line of reasoning, it must, therefore, be recognized that turning to the attribution rules of the residence state to ascertain whether or not this is the case is the most convincing solution.

27. Art. 31(4) *Vienna Convention*.

28. Footnote to para. 12.1 *Proposed OECD Model: Commentaries on Articles 10, 11 and 12*.

This new section should, in the author's view, first confirm that trusts should be regarded as persons falling within the meaning of article 3 of the OECD Model. Second, the Commentary should also clarify that a trust, to the extent that it is treated as a separate taxpayer in the residence state, is a person liable to tax within the meaning of article 4 of the OECD Model, even if it enjoys, for example, a distribution deduction. Third, this new section could also note that the principles developed in the Partnership Report (OECD 1999), which are intended to resolve source-residence conflicts of attribution, are equally applicable to trusts. Finally, in line with the approach adopted with regard to collective investment vehicles and the latest discussion draft on beneficial ownership, the new Commentary could state that whether or not a trust satisfies the beneficial ownership requirement depends on whether its trustees enjoy discretion over the income arising in the source state.

## 5. Relationship between Beneficial Ownership and Other Anti-Abuse Rules

### 5.1. Discussion draft

The discussion draft also briefly discusses another important issue, which is the relationship between the beneficial ownership requirement and other anti-abuse rules. According to the discussion draft:<sup>29</sup>

Whilst the concept of "beneficial owner" deals with some forms of tax avoidance (i.e. those involving the interposition of a recipient who is obliged to pass the dividend to someone else), it does not deal with other cases of treaty shopping and must not, therefore, be considered as restricting in any way the application of other approaches to addressing such cases.

### 5.2. Comment

This statement of the discussion draft is of critical importance. Under the OECD Model, which does not incorporate any other express anti-abuse requirement, the main issue arising is the relationship between the beneficial ownership requirement and the "guiding principle" in paragraph 9.5 of the Commentary on Article 1 of the OECD Model (2003), which provides that:

... the benefits of a double taxation convention should not be available where a main purpose for entering into certain transactions or arrangements was to secure a more favourable tax position and obtaining that more favourable treatment in these circumstances would be contrary to the object and purpose of the relevant provisions.

In the author's opinion, even if it were accepted that treaty benefits are subject to this guiding principle, the conclusion must be drawn that this principle is of a subsidiary nature and cannot be used to test a segment of the fact pattern that is already covered by the beneficial ownership requirement. The cumulative application of both the beneficial ownership requirement and the guiding principle to the same fact pattern would undermine a literal reading of the OECD Model. It is, therefore, essential to distinguish between the scope of the beneficial ownership requirement and the guiding principle. In the author's view, the elements of the fact pattern that relate to the manner in which the income arising in the source state

is transferred to the residence state should exclusively be tested in light of the beneficial ownership requirement. The guiding principle, on the other hand, may be used to test other elements of the fact pattern, such as the circumstances surrounding the transfer of shares to a company residing in the residence state. The parallel application of these two principles may be illustrated by the following basic example.

#### Example:

Company A, a resident of State S, is wholly owned by Company B, a resident of State X. Company B transfers its shares in Company A to Company C, a resident of State R. The shareholders of Company A and C are also residents of State X. In line with the OECD Model, State S has concluded a tax treaty with State X that provides for a 5% residual tax on dividends distributed to a parent company. On the other hand, State S has concluded a tax treaty with State R that is also based on the OECD Model, but which provides for a nil rate on dividend distributions. Shortly after the transfer, Company A distributes a large amount of its retained earnings to Company C.

In this example, the question of whether or not treaty benefits are to be denied on the basis of the fact that income arising in State S is abusively transferred to residents of State X through Company C should exclusively be tested in light of the beneficial ownership requirement (ownership aspect of the fact pattern). In this respect, it is critical to determine whether or not Company C is in a position to control the ultimate attribution of the income it receives. The guiding principle of the Commentary, on the other hand, may be used to test the other elements of the fact pattern (restructuring aspect of the fact pattern), i.e. whether or not a large distribution of retained earnings shortly after the share transfer is abusive within the meaning of this principle.

## 6. Conclusions

The OECD discussion draft, which is intended to clarify the meaning of the beneficial ownership requirement, is a welcome development. However, as was demonstrated in this article, the OECD proposals are not entirely consistent with the OECD's earlier work in this area and need to be refined. First, the OECD should make it very clear that beneficial ownership is a treaty concept that leaves no room for the application of the domestic law of the source state. Second, the general definition proposed by the OECD places too much emphasis on the enjoyment of income by the recipient. As noted, the OECD should, rather, favour a definition based on "economic control". In the author's opinion, the beneficial owner is the person, "who legally, economically or factually has the power to control the attribution of the income". Last but not least, rather than discussing the application of the beneficial ownership requirement to trusts in a mere footnote, the author believes that the Commentary on Article 1 should be amended to

29. Para. 12.5 *Proposed OECD Model: Commentaries on Articles 10, 11 and 12*.

include a specific section dealing with the application of the OECD Model to trusts. This section could easily be prepared, as it would essentially be based

on the work undertaken by the OECD in the area of partnerships and collective investment vehicles.

## 1. Policy and History

### 1.1. Policy

#### 1.1.1. Summary

This chapter deals with the interpretation of tax treaties. A point should be made at the outset that it is irrelevant that a tax treaty may also be, or become, part of domestic law. So, as far as interpretation is concerned, it remains a tax treaty and part of international law. Any rules of domestic law, such as that a taxing act must be construed against the taxing authorities, do not apply. It used to be the case that tax professionals interpreted tax treaties as if they were domestic law, but, recently, there has been more understanding that treaty interpretation is a topic in itself. There are two main topics to be considered: (i) the [Vienna Convention \(1969\)](#)<sup>[1]</sup> (see section 3.); and (ii), in addition to the definitions in several treaty articles and the definitions in article 3(1), article 3(2) of the OECD Model<sup>[2]</sup> (see section 3.). The role of the Commentaries on the OECD Model<sup>[3]</sup> in interpretation is dealt with in section 3. Article 3(2) of the OECD Model is considered in section 4. Finally, a number of interpretation issues in tax treaties are dealt with in section 5. Before dealing with interpretation proper, some issues concerning the effect of tax treaties in domestic law that may result in a treaty not having the effect that its interpretation suggests are dealt with in section 2.

#### 1.1.2. Policy

##### 1.1.2.1. The status of interpretative materials

The [Vienna Convention \(1969\)](#) unsurprisingly does not deal with commentaries to a model tax treaty, which are unusual. Normally, interpretative material is specific to a particular tax treaty, whether bilateral or multilateral, and the interpretative provisions of the Vienna Convention (1969) give these the status of

1. [Vienna Convention on the Law of Treaties](#) (23 May 1969), Treaties IBFD.

2. [OECD Model Tax Convention on Income and on Capital](#) (21 Nov. 2017), Models IBFD.

3. [OECD Model Tax Convention on Income and on Capital: Commentaries](#) (21 Nov. 2017), Models IBFD.

context under article 31(2) or (3), which will apply to the [Explanatory Statement](#) to the OECD Multilateral Convention (MLI) (2017)<sup>[4]</sup> (see section 5.3.1.). However, the Commentaries on the OECD Model, which are unrelated to a particular treaty and specifically state that they are not legally binding, are difficult to reconcile with the terms of the Vienna Convention (1969). Various different views on the status of the OECD Commentaries are discussed in section 3.11. Whether it would be possible to improve this state of affairs is a policy question. It would clearly not be possible for the OECD Commentaries to be binding, both because of the variety of material that they contain and because this would inhibit their development, as states would have to be very careful about what they contained. The following statement in the OECD Commentaries, dating from 2000, is useful in providing encouragement to courts to pay attention to the Commentaries:

29.3 Bilateral tax treaties are receiving more and more judicial attention as well. The courts are increasingly using the Commentaries in reaching their decisions. Information collected by the Committee on Fiscal Affairs shows that the Commentaries have been cited in the published decisions of the courts of the great majority of member countries. In many decisions, the Commentaries have been extensively quoted and analysed, and have frequently played a key role in the judge's deliberations. The Committee expects this trend to continue as the worldwide network of tax treaties continues to grow and as the Commentaries gain even more widespread acceptance as an important interpretative reference.

The only other approach possible would be for the Commentaries on the OECD Model to deal with the issue of the relationship with the Vienna Convention (1969), for those courts that like a peg on which to hang their use of the Commentaries, perhaps saying that they are intended to have higher weight than article 32 material. However, once it is accepted that the Commentaries are not binding, using of them becomes a matter of the weight that should be accorded to them, which will always be a matter of judgment in any given case.

#### 1.1.2.2. Common interpretation

The general rules of treaty interpretation produce the generally sensible result that a tax treaty receives a common interpretation in the states that are parties to it. The policy issue for tax treaties in relation to common interpretation relates to the existence of article 3(2) of the OECD Model, under which, apart from the competent authorities having the power to agree to a common interpretation by virtue of a change to the article made in the 2017 update (see section 4.3.1.), each state can interpret a term differently, depending on its domestic law. This works to their advantage, because taxation arises under domestic law and relief from taxation arises under tax treaties. The effect of applying domestic law to an undefined treaty term is that the treaty relief from taxation corresponds exactly with the taxation of that term in domestic law. If that were not the case and the term had a common meaning in both states that was wider than the domestic law meaning of the term, the disadvantage would be that if the treaty provided that a particular type of income was taxable in given circumstances, there would not necessarily be any taxation as this would depend on domestic law applying to what in domestic law was a different type of income. Consequently, applying a common meaning does not result in the same tax treatment in both states. It is less problematic if the treaty requires exemption of the type of income in given circumstances, because both states will exempt the income within the common meaning, even

4. [OECD Multilateral Convention to Implement Tax Treaty Related Measures to Prevent Base Erosion and Profit Shifting](#) (7 June 2017), Treaties IBFD.

though this is wider than the domestic law meaning. However, if that meaning were narrower than the domestic law meaning, it would leave some income taxable under domestic law that is exempted by the tax treaty. Initially, many states were reluctant to accept this if the result were that different domestic law meanings in the two states affected the relief article and looked for possible reasons why the context would require that domestic law should not be used. However, since the Commentary on Article 23 of the OECD Model provides that in such a case the residence state, in giving relief,<sup>[5]</sup> should generally<sup>[6]</sup> accept the source state's application of its domestic law in taxing the income, this is not a problem for states accepting this interpretation. Unless the competent authorities agree to a common interpretation, article 3(2) of the OECD Model means that common interpretation in the sense of a term having an autonomous meaning can arise only if the context otherwise requires the domestic law meaning not to be applied, which, because of the need to keep the treaty relieving provisions in line with the domestic law tax charge, is likely to be infrequent. Judging from the US experience, where the power to make mutual agreements on interpretation that override the rest of article 3(2) is contained in about 38 of their treaties since 1982, this power is also likely to be used infrequently.

The other aspect of a common interpretation is the use of foreign court decisions. Apart from the difference caused by article 3(2) of the OECD Model and more specific treaty provisions that produce a similar result,<sup>[7]</sup> there is scope for a common interpretation particularly of treaty issues not depending on the meaning of terms, for example, the issue of whether two domestic subsidiaries of a treaty partner holding company can group their profits and losses under whatever method domestic law prescribes.<sup>[8]</sup> A common interpretation does not imply that a court should automatically follow any foreign court decision. It is suggested that the following is a reasonable approach:

As respects decisions of foreign courts, the persuasive value of a particular court's decision must depend on its reputation and its status, the extent to which its decisions are binding on courts of co-ordinate and inferior jurisdiction in its own country and the coverage of the national law reporting system. For instance your Lordships would not be fostering uniformity of interpretation of the convention if you were to depart from the *prima facie* view which you had yourselves formed as to its meaning in order to avoid conflict with a decision of a French court of appeal that would not be binding on other courts in France, that might be inconsistent with an unreported decision of some other French court of appeal and that would be liable to be superseded by a subsequent decision of the Court of Cassation that would have binding effect on lower courts in France.<sup>[9]</sup>

The courts in some states are clearly reluctant to refer to foreign court decisions because of their legal background in relation to domestic law. In international law, however, such a reference is merely one type of supplementary means of interpretation authorized by article 32 of the [Vienna Convention \(1969\)](#), so there is no reason to ignore them because they conflict with the approach in domestic law, and every

5. Paras. 32.1 to 32.7 *OECD Model: Commentary on Article 23*.

6. While art. 3(2) *OECD Model* usually points to the source state, that is not invariably the case, for example where art. 19(1) precludes taxation by the residence state.

7. See arts. 6(2) and 10(3) *OECD Model*, third limb, which, however, are different in specifying that the definition in the source state (location of immovable property, residence of the company paying a dividend) is to be applied.

8. See NL: HR, 23 Dec. 1992, [Case 27.843](#), BNB 1993/71c, Tax Treaty Case Law IBFD; FI: KHO, Decision 10.05.2000/864; SE: RA, 1996 ref. 69 and 1998 ref. 49; FI: KHO: 1992-B-509 and 1992-B-510; and UK: FTT, 1 Apr. 2010, *FCE Bank plc v. HMRC*, [2010] UKFTT 136 (TC), which referred to all of the above decisions as confirmation of the decision it had reached, i.e. as supplementary means of interpretation (the foreign decisions aspect was not dealt with on appeal).

9. UK: HL, 10 July 1980, *Fothergill v. Monarch Airlines* [1981] AC 251, 284, per Lord Diplock.

reason to consider them. Care is required in considering foreign decisions that may be based on later versions of the OECD Commentaries than the treaty being interpreted.

There is now a lot of similarity between methods of interpretation in different countries. The Commentaries on the OECD Model are now used widely by the courts, and there is starting to be a tendency, which should be encouraged, to consider treaty interpretation decisions by courts in other jurisdictions.

## 1.2. History

### 1.2.1. League of Nations

Early model tax treaties did not contain any definitions of types of income, with the exception that “income from movable capital” was defined in the League of Nations Mexico Draft (1943). Article 3(2) was first used in the United Kingdom-United States Income Tax Treaty (1945).<sup>[10]</sup> Unfortunately, there does not seem to be any archive material in either country about its origins. However, there had been two earlier indications of the same approach: (i) the Canada-United States Income Tax Treaty (1942)<sup>[11]</sup> (which was used as a basis for the initial draft of the United Kingdom-United States treaty (1945)) provided that “person”, “individual” and “corporation” had the same meaning as “under the revenue laws of the taxing state”; and (ii) a similar but unilateral approach was contained in the US Regulations<sup>[12]</sup> made under the Sweden-United States Income and Capital Tax Treaty (1939),<sup>[13]</sup> which provided that

[a]ny word or term used in these Regulations which is not defined in the Convention but is defined in the Internal Revenue Code shall be given the definition defined therein.

### 1.2.2. The OEEC/OECD to 1963

Article 3(2) of the OECD Model seems to be a natural progression from these. The qualification “unless the context otherwise requires” is a familiar one in UK statutes and agreements. See section 1.2.3. and section 4.3.1. for the current version of article 3(2).

The [OECD 1963 Draft](#) version read as follows:

As regards the application of the Convention by a Contracting State any term not otherwise defined shall, unless the context otherwise requires, have the meaning which it has under the laws of that Contracting State relating to the taxes which are the subject of the Convention.

### 1.2.3. The OEEC/OECD to 1977

The [OECD Model \(1977\)](#) contained minor drafting changes and read as follows:

10. [The UK-US. Income Tax Treaty](#) art. II(3) (1945), Treaties IBFD.

11. [The Can.-US Income Tax Treaty](#) Protocol 3(a) (1942), Treaties IBFD.

12. US Regs. TD4975, 1940-2 Cum. Bull. 43.

13. [The Swed.-US Income and Capital Tax Treaty](#) (1939), Treaties IBFD.

As regards the application of the Convention by a Contracting State any term not defined shall, unless the context otherwise requires, have the meaning which it has under the law of that Contracting State relating to the taxes which are the subject of the Convention.

From 1995 to 2017, it read as follows:

As regards the application of the Convention at any time by a Contracting State, any term not defined therein shall, unless the context otherwise requires, have the meaning that it has at that time under the law of that State for the purposes of the taxes to which the Convention applies, any meaning under the applicable tax laws of that State prevailing over a meaning given to the term under other laws of that State.

The change was made to clarify that its effect was ambulatory, following a decision to the contrary in the Canadian case of *Melford* (1961),<sup>[14]</sup> but there are many other decisions to the effect that the earlier version was already ambulatory (see section 4.8.2.).

A further change was made in 2017, so that it now reads as follows:

As regards the application of the Convention at any time by a Contracting State, any term not defined therein shall, unless the context otherwise requires *or the competent authorities agree to a different meaning pursuant to the provisions of Article 25*, have the meaning that it has at that time under the law of that State for the purposes of the taxes to which the Convention applies, any meaning under the applicable tax laws of that State prevailing over a meaning given to the term under other laws of that State.

The words in italics were added to enable the competent authorities to agree on a common interpretation pursuant to the mutual agreement procedure article that is different from domestic law in the state applying the tax treaty even though the context did not require that domestic law should not be used (see section 4.3.1.).

## 1.2.4. Other historical sources

### 1.2.4.1. Treatment of treaties like statutes

Earlier, many states did not make any distinction between the interpretation of domestic statutes and treaties,<sup>[15]</sup> but now there is general acceptance of applying the interpretative provisions of the [Vienna Convention \(1969\)](#) where they differ from those applying to the interpretation of domestic law. Some differences that can be found are that sometimes in domestic law a hierarchy of methods of interpretation are applied, or that greater use is made of supplementary materials, or a different emphasis is given to purpose compared to the wording. An early article in 1977 entitled “Principles to be Applied in Interpreting Tax Treaties”<sup>[16]</sup> drew attention to the potentially different methods of interpretation

14. CA: SC, 28 Sept. 1982, *Melford v. Her Majesty the Queen*, 2 SCR 504, Tax Treaty Case Law IBFD.

15. For instance, see AU: HC, 5 June 1969, *The English, Scottish and Australian Bank Limited v. Federal Commissioner of Taxation*, 118 CLR 651, Tax Treaty Case Law IBFD; and AU: SCNSW, 9 Feb. 1984, *Max Factor and Co v. Federal Commissioner of Taxation*, 84 ATC 4070.

16. David A. Ward, *Principles To Be Applied in Interpreting Tax Treaties*, 25 Canadian Tax Journal 3, pp. 263-270 (1977).

of treaties compared to domestic law. This was followed by an article in 1984<sup>[17]</sup> after the entry into force of the Vienna Convention (1969) in 1980 that raised the profile of the topic. Today most judgments about tax treaties refer to the Vienna Convention (1969).

#### 1.2.4.2. Vienna Convention (1969) interpretation provisions

During the preparations for the [Vienna Convention \(1969\)](#), it was decided that treaty interpretation had to be elaborated on without trying to be comprehensive. In doing so, the International Law Commission (ILC) “confined itself to trying to isolate and codify the comparatively few general principles which appear to constitute general rules for the interpretation of treaties”.<sup>[18]</sup> Sir Humphrey Waldock, as Special Rapporteur to the ILC, prepared a first draft in the Third Report, which, after a number of drafting changes, became articles 31 to 33 (see sections [3.4.](#) and [3.5.](#)).<sup>[19]</sup>

Guidance was mainly needed to deal with the difference between those favouring the “intentions of the parties” approach, who would use supplementary means of interpretation freely, and those favouring the “textual” approach, who would limit the use of supplementary materials to resolving ambiguities or preventing absurd or unreasonable results. It will be seen that the ILC decided it was desirable to “take a clear position in regard to the role of the text in treaty interpretation”,<sup>[20]</sup> which was that the interpretation provisions are

based on the view that the text must be presumed to be the authentic expression of the intentions of the parties, and that, in consequence, the starting point of interpretation is the elucidation of the meaning of the text, not an investigation ab initio into the intentions of the parties.<sup>[21]</sup>

This was a continuation of the major principles of interpretation set out by Sir Gerald Fitzmaurice in 1956. The approach is demonstrated by the existence of a primary rule in article 31 of the Vienna Convention (1969) referring to the ordinary meaning of language in its context, and the limited use allowed for supplementary means of interpretation in article 32 – to confirm the article 31 interpretation, or to determine the meaning where article 31 leaves it ambiguous or obscure, or leads to a result that is manifestly absurd or unreasonable.

These interpretation provisions are generally considered to be statements of existing rules and are therefore applied even to treaties made before the Vienna Convention entered into force and by states that have not signed or ratified it. Gardiner states: “That the [International Court of Justice] views the Vienna rules [of interpretation] as general, or customary international law seems incontrovertible.”<sup>[22]</sup> There are examples where the court has applied them to a state that is not a party to the Vienna Convention. Gardiner traces the development of the court’s recognition of this over a period of more than 20 years.<sup>[23]</sup>

### 1.3. Relationship to basic principles of international taxation

Not applicable at present.

## 2. Interpretation versus Operation in Domestic Law

### 2.1. The difference between interpretation and operation in domestic law: In general

An initial distinction should be made between interpretation of a treaty, which is the meaning that an international court applying the correct principles of treaty interpretation would give it (assuming that an international court with jurisdiction existed) and the operation that the treaty has in domestic law. Normally, these will be the same, but a number of factors can mean that they are different. Principally, the difference will arise because of a feature of domestic law that means that the treaty does not have the effect that it should have. These include the issues set out in section 2.2.

### 2.2. The difference between interpretation and operation in domestic law: Specific issues

#### 2.2.1. Override of the treaty by domestic law

See also: [K. Vogel et al., Tax Treaties and Domestic Law ch. 4 \(G. Maisto ed., IBFD 2006\), Online Books IBFD](#)

See also: [Tax treaties and tax avoidance: application of anti-avoidance provisions \(IFA Cahiers, vol. 95A 2010\), Online Books IBFD](#)

See also: [T. Kulcsár & J. Rogers-Glabush, Treaty Override: Reviving a Long-Forgotten Debate in the Name of Anti-Avoidance, 53 Eur. Taxn. 9/Special Issue, Journals IBFD](#)

#### 2.2.1.1. Basic principles: Dualist and monist states

While a treaty is binding on a state in international law and must be performed in good faith, what matters to taxpayers is the effect of the treaty in domestic law. There are circumstances in which in some states domestic law can override a treaty, depending on how treaties are given effect in domestic law. In monist states, international and domestic law are part of the same system in which international obligations have a higher status, while, in dualist states, where international and domestic law are separate systems, a treaty has to be given effect in domestic law. The possibility of treaty override in general follows this distinction. Later domestic law can override a treaty in dualist states, as the treaty was given effect by an earlier domestic law, and so later domestic law can take away some of that effect. This is possible in Australia, Austria, Canada,<sup>[24]</sup> Denmark, Italy,<sup>[25]</sup> Finland, Sweden and the

<sup>24.</sup> But the legislation giving effect to the tax treaty provides that the tax treaty cannot override the Income Tax Conventions Interpretation Act.

<sup>25.</sup> But the constitution provides that legislative power must be exercised in compliance with international obligations (including the obligations stemming from treaties) and so any later domestic law overriding a tax treaty may be challenged before the *Corte Costituzionale* (Constitutional Court) as being in violation of article 117 of the Italian Constitution.

United Kingdom. There are conflicting decisions on this issue in the courts in South Africa.<sup>[26]</sup> As treaties in Singapore are given effect by regulations and regulations cannot be inconsistent with statutes, it is possible for a statute to override a treaty though there has not been any case law on the issue. There are exceptions in dualist states: in Argentina, having incorporated the treaty into domestic law, it is given a higher status than domestic law generally. In monist states, it is generally not possible for domestic law to override a treaty as the treaty has a higher status to domestic law, although it might be still possible for a change in the constitution to override a treaty. This is the case in Belgium, China, France, Germany,<sup>[27]</sup> Italy, Japan, Mexico and the Netherlands. Nevertheless, in some monist states, it is possible for domestic law to override a treaty; this is the case in Spain and Switzerland (but this has never been applied to a tax treaty). Even where domestic law and treaty law have the same hierarchical status, as in the United States, and so there is nothing, in principle, to prevent later domestic law from overriding a treaty, there is another possibility of preventing override. The Brazilian *Supremo Tribunal Federal* (Supreme Federal Court, STF) has given priority to treaty law over later domestic law on the basis that the treaty is special law (*lex specialis*) which prevailed over general laws (*lex generalis*), thus preventing treaty override.<sup>[28]</sup> In Brazil, although treaties and domestic law have the same status and in general treaties can be overridden by later law, a tax law provision prevents this outcome.

### 2.2.1.2. Domestic law overrides

The fact that domestic law can override a treaty does not necessarily mean that later law will override a treaty. In general, the law will try to give effect to the treaty, but there will be a point at which this is no longer possible. As was said in *Maxwell on the Interpretation of Statutes* (quoted with approval by the UK House of Lords (HL) in *Colco Dealings* (1961)),<sup>[29]</sup>

[u]nder the same general presumption that the legislature does not intend to exceed its jurisdiction, every statute is to be so interpreted and applied, as far as its language admits, as not to be inconsistent with the comity of nations, or with the established rules of international law ... But if the statute is unambiguous, its provisions must be followed, even if they are contrary to international law.<sup>[30]</sup>

Similar statements are found in the US courts.<sup>[31]</sup> The same approach can also be found in the Swedish *Högsta förvaltningsdomstolen* (Supreme Administrative Court, HF) in *Skatteverket v. A*,<sup>[32]</sup> in which the HF said that, while there was no formal or constitutional rule that prevented override, the general

26. As decided by the Constitutional Court (CC) in ZA: CC, 17 Mar. 2011, *Glenister v. President of the Republic of South Africa* 2011 3 SA 347 (CC) (a non-tax case) to the effect that the treaty has priority and the Western Cape High Court (WCC) in ZA: WCC, 22 Nov. 2011, *South African Revenue Service v. Werner van Kets* 2012 3 SA 399 (WCC), Tax Treaty Case Law IBFD, (a tax treaty case) to the effect that the two should be “reconciled and read as one coherent whole”.

27. Where the German *Bundesfinanzhof* (Federal Tax Court, BFH) has held that treaty overrides, in that case, DE: *Einkommensteuergesetz* [Income Tax Law, EStG], sec. 50d(8), comply with German constitutional law only in exceptional cases. A case was decided on this issue by the *Bundesverfassungsgericht* (Federal Constitutional Court) on 15 December 2015, thereby confirming the validity of treaty override without its being limited to exceptional cases (see Press Release No. 9/2016 of 12 February 2016).

28. BR: STF, 17 May 2012, *National Treasury v. COPESUL – CIA/Petroquímica do Sul*, Special Appeal No. 1.161.467 – RS (2009/0198051 – 2, Tax Treaty Case Law IBFD.

29. UK: HL, 2 Mar. 1961, *Commissioners of Inland Revenue v. Colco Dealings Ltd.*, (1961) 39 TC 509, Tax Treaty Case Law IBFD.

30. The current edition (with minor changes to the quoted passage) is P. St. J. Langan, *Maxwell on the Interpretation of Statutes* 12th edn, p. 183 (Sweet & Maxwell 1969).

31. See the decisions of the US Supreme Court (SC) in US: SC, 10 June 1957, *Reid v. Covert*, 354 U.S. 1 (1957) and US: SC, 9 Jan. 1888, *Whitney v. Robertson*, 124 U.S. 190, 194 (1888).

32. SE: HF, 14 Dec. 2010, *Skatteverket v. A*, 283-10, Tax Treaty Case Law IBFD.

approach was that later legislation did not override a treaty, unless the legislature clearly expressed the intention that it overrode treaties.

If there is an override, the other state may be able to terminate the treaty for material breach caused by a serious override (see section 3.8.3.), but this is unusual. Termination of the treaty will leave the objectionable domestic law in place and so termination will not benefit the other state or its taxpayers, and, indeed, will deny all the other treaty benefits to them. Not all override is bad for taxpayers; there are cases of states widening the effect of the tax treaty for the benefit of the taxpayer by override. One example is that, when the United Kingdom changed its death duties from estate duty to capital transfer tax (now called inheritance tax) in 1974, tax treaties concluded when estate duty applied (which applied only to that duty) were applied in the United Kingdom to the new tax.

### 2.2.1.3. The OECD and treaty override

The OECD has published a Report on Tax Treaty Override<sup>[33]</sup> containing some hypothetical examples and setting out the strong opposition to it by the Committee on Fiscal Affairs, while recognizing that there are circumstances in which a state may legitimately need to override a treaty, particularly to counteract treaty abuse. Preventing treaty abuse is part of the minimum standard under Action 6 of the OECD/G20 Base Erosion and Profit Shifting (BEPS) Project, and, as a result, it is possible that treaty override may become more common.

It should be noted that, while article 3(2) of the OECD Model (under which undefined terms in the tax treaty may have the meaning which they have in domestic law; see section 4.3.) states that this means domestic law as it is when the tax treaty is being applied (an ambulatory interpretation), and the same is implied in earlier versions of article 3(2), a change in domestic law is not an override, as the tax treaty contemplates that domestic law may change. It may, however, be possible to argue that the context requires that the later domestic law does not apply, for example, because the change in domestic law was not made in good faith (see section 4.6.).

### 2.2.2. Incomplete incorporation of the treaty in dualist states

The opposite of override (which might be called “underride”) is when the treaty is never given full effect in domestic law. This usually occurs when domestic law in a dualist country uses secondary legislation that limits the effect that a treaty can have. An example is that, in the United Kingdom, tax treaties are given effect for income tax, corporation tax and capital gains tax and so a provision in the tax treaty that states that it applies to all taxes, such as articles 24(6) and 27(1) of the OECD Model, cannot have effect in domestic law in the United Kingdom (but may do so in the other state). Nor can a provision applying the tax treaty to substantially similar taxes<sup>[34]</sup> have any effect without domestic legislation. Another example in the United Kingdom is provided by *Sun Life of Canada* (1984),<sup>[35]</sup> in which the High Court (HC) decided that a credit for foreign tax was not available to a permanent establishment (PE) by virtue of the non-discrimination article, as the legislation<sup>[36]</sup> gave relief “subject to the provisions of this Part [of the Taxes Act 1988]”, one of which provided that only residents qualified for relief.<sup>[37]</sup>

33. OECD, *Report on Tax Treaty Override* (OECD 1989).

34. Art. 2(4) OECD Model (2017).

35. UK: HC, 17 Apr. 1984, *Sun Life of Canada v. Pearson* [1984] STC 461, 516b. The decision was appealed, but not on this point.

36. UK: *Income and Corporation Taxes Act 1988*, sec. 788(3), National Legislation IBFD, now UK: *Taxation (International and Other Provisions) Act 2010*, sec. 18(4).

37. The law has since been changed to give relief.

The problem does not arise in dualist states where the treaty is incorporated into domestic law by primary legislation, as in Australia (except that in the past tax treaties were given effect for the purposes of Australian tax, which may have meant that there was incomplete implementation, for example, in relation to exchange of information; with regard to exchange of information, any problem in this respect was removed by section 23 of the International Tax Agreements Act 1953, which also applies to tax information exchange agreements (TIEAs)), Brazil, Canada, Denmark, Finland, Germany (where both the lower and upper legislative bodies (*Bundestag* (Federal Diet) and *Bundesrat* (Federal Council)), respectively must declare their formal consent to a treaty by passing a formal act (*Zustimmungsgesetz*)) and Sweden, as incorporation must be complete. The problem cannot arise in monist countries, where the treaty does not need to be incorporated into domestic law. There are the following two types of monist countries: (i) those where the treaty has effect without any further requirement, such as China and Switzerland; and (ii) those where some Parliamentary approval or publication in an official journal is also required, as in Belgium, France, Italy, Japan (under the Constitution the treaty must be approved by the Diet), the Netherlands (although a court cannot take account of a failure to do this), Spain and the United States (where the “advice and consent” of the Senate is necessary for ratification).

### 2.2.3. Cherry picking between treaty and domestic law

Another issue is whether or not a taxpayer can use the tax treaty in relation to one item of income and domestic law in relation to another. For instance, if, in domestic law, business profits are taxable in the absence of a PE, so that the treaty PE concept cuts down domestic law, can the taxpayer apply the tax treaty to avoid paying tax on business profits where there is no PE, but use domestic law to claim to use losses? Or can the taxpayer use the tax treaty in relation to an item of income for one tax year but not another? There does not seem to be any consensus regarding this issue and domestic law is relevant.

In some countries, the benefit of the tax treaty has to be claimed before it can be applied. This is the case in Mexico, the United Kingdom and the United States (where the taxpayer must disclose the use of the tax treaty in the return or attached statement). In countries where the benefit of the tax treaty must be claimed, cherry picking is possible over different years by claiming or not claiming the benefit of the tax treaty. There is no possibility in these countries of a court itself giving effect to the tax treaty without such a claim having been made by the taxpayer. Where the benefit of the tax treaty does have to be claimed by the taxpayer, civil law courts, in France, for example, can give effect to the tax treaty *ex officio*; in general, common law courts will not deal with a point that has not been argued by the parties.

The US Technical Explanation (2003)<sup>[38]</sup> to the United Kingdom-United States Income Tax Treaty (2001)<sup>[39]</sup> contains the following statement on cherry picking:

It follows that, under the principle of paragraph 2 [i.e. that the treaty cannot hurt a taxpayer], a taxpayer’s U.S. tax liability need not be determined under the Convention if the Code would produce a more favorable result. A taxpayer may not, however, choose among the provisions of the Code and the Convention in an inconsistent manner in order to minimize tax. For example, assume that a resident of the United Kingdom has three separate businesses in the United

38. Department of the Treasury Technical Explanation of the Convention between the Government of the United States of America and the Government of the United Kingdom of Great Britain and Northern Ireland for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with respect to Taxes on Income and on Capital Gains art. 1(2) (5 Mar. 2003), Treaties IBFD, also available at [www.treasury.gov/resource-center/tax-policy/treaties/Documents/teus-uk.pdf](http://www.treasury.gov/resource-center/tax-policy/treaties/Documents/teus-uk.pdf).

39. The UK-US Income Tax Treaty (2001), Treaties IBFD.

States. One is a profitable PE and the other two are trades or businesses that would earn taxable income under the Code but that do not meet the permanent establishment threshold tests of the Convention. One is profitable and the other incurs a loss. Under the Convention, the income of the permanent establishment is taxable in the United States, and both the profit and loss of the other two businesses are ignored. Under the Code, all three would be subject to tax, but the loss would offset the profits of the two profitable ventures. The taxpayer may not invoke the Convention to exclude the profit of the profitable trade or business and invoke the Code to claim the loss of the losing trade or business against the profit of the permanent establishment. See Rev. Rul. 84-17, 1984-1 C.B. 308. If, however, the taxpayer invokes the Code for the taxation of all three ventures, the taxpayer would not be precluded from invoking the Convention, for example, with respect to any dividend income the taxpayer may receive from the United States that is not effectively connected with any of the taxpayer's business activities in the United States.

#### 2.2.4. Can the treaty extend taxing rights?

Normally, it is understood that the tax treaty relieves from tax, although there are a few countries, such as France<sup>[40]</sup> and Japan, where, if the tax treaty provides for something to be taxable that domestic law does not otherwise tax, taxation has effect for domestic law purposes. A more limited example of the same point is that, in Australia and Japan, treaty source rules also have effect for domestic law, which can have the result that tax is payable under domestic law as a result of the tax treaty that would not have been under domestic law on its own. This cannot arise in other countries, where, in general, tax treaties only relieve from tax, but there can be borderline cases where a taxpayer can be worse off as a result of the tax treaty than it would have been in domestic law. For instance, if a loss is made when carrying on business in a state without a PE that could be used under domestic law, the effect of the tax treaty not taxing the business because there is no PE may be that the loss cannot be used. China's position is unclear. As a result of the enlarged preamble to tax treaties effected by article 6 of the MLI, which states that relieving from tax must be accomplished "without creating opportunities for non-taxation or reduced taxation through tax evasion or avoidance", it is possible that states may in future be more willing to consider changing domestic law to enable tax treaties to impose tax.

#### 2.2.5. Mutual agreement on interpretation: Binding in international law, but not necessarily in domestic law

As a matter of international law, an agreement between states on the interpretation of the treaty is binding (see section 3.4.5.). The treaty is a contract, and if both parties agreed that it means something, that is the meaning. However, that may not be the effect in domestic law in respect of tax treaties for the reasons given in section 3.14.

#### 2.2.6. Subsequent practice: relevant to interpretation in international law but may not be so in domestic law

Subsequent practice of the treaty parties is part of the context according to [article 31\(3\)\(b\) of the Vienna Convention \(1969\)](#) on the basis that it establishes the understanding of the parties as to the

40. In *min c/ Sté Interhome AG* (FR: CE, 20 June 2003, Case No. 224407), the CE applied this principle in a case involving article 209 of the *Code Général des Impôts* (General Tax Code, CGI), which provides that only profits deriving from an enterprise operated in France are subject to French corporate income tax (principle of territoriality). However, as the very end of this provision indicates that corporate income tax also concerns profits "taxation of which is attributed to France by an international convention", the CE authorized the French tax authorities to tax a non-resident company on the combined grounds of article 209 of the CGI and the provisions of the *Fr.-Switz. Income and Capital Tax Treaty* (1966), Treaties IBFD. See FR: CE 31 July 2009, Case No. 296471, *Overseas Thoroughbred Racing Stud Farms Ltd*, Tax Treaty Case Law IBFD, for another example.

interpretation of the treaty. As with mutual agreements, this may not be the effect in domestic law for tax treaties for the reasons given in section 3.14.

### 2.2.7. Domestic law use of material not permitted in international law

In section 2.1., it was assumed that a domestic court applied the same principles of interpretation of the treaty which an international court would do if it had jurisdiction. In some countries, a domestic court may use materials that would not be proper for international law treaty interpretation, such as unilateral material, or give additional weight to the interpretation of the tax authorities, both of which occur in the United States (see section 5.2.2.2.).

## 3. Vienna Convention (1969) and the OECD Models

See also: [F. Engelen, Interpretation of Tax Treaties under International Law \(IBFD 2004\), Online Books IBFD](#)

See also: [J.A. Becerra, Interpretation and Application of Tax Treaties in North America – Second revised edition ch. 4 \(IBFD 2013\), Online Books IBFD](#)

See also: [S. Douma et al., The Legal Status of the OECD Commentaries \(S. Douma et al. eds., IBFD 2008\), Online Books IBFD](#)

### 3.1. In general

The [Vienna Convention \(1969\)](#) has far wider application than simply interpretation, including such matters as the relationship with domestic law, the non-retroactivity of treaties and termination of treaties (see section 3.8.).

In particular, the [Vienna Convention \(1969\)](#) has its own preparatory work: the Commentary on the Vienna Convention (1969), which is useful in its interpretation. The Commentary on the Vienna Convention (1969) was drafted by the International Law Commission before the finalization of the text of the Vienna Convention (1969) and the article numbers changed in the final version. References to article numbers have, therefore, been updated in the quotations in section 3.

It should be noted that, while the Vienna Convention (1969) applies only to treaties concluded after 27 January 1980, the interpretation provisions are generally regarded, including by the International Court of Justice (ICJ), as reflecting existing international law and are, therefore, applicable whenever the particular treaty was entered into. Statements by courts or tax authorities to that effect can be found in Australia, Belgium, Brazil (in relation to a different provision of the Vienna Convention (1969)), Canada,

France (which has not signed the Convention), Germany, India (which has not signed the Convention), Italy, the Netherlands, Norway, South Africa (which has not signed the Convention), Spain, Switzerland, the United Kingdom and the United States (which has signed, but not ratified the Convention). The Vienna Convention (1969) has not been signed or ratified by Singapore and the position of the tax authorities on this point has not been published.

### 3.2. Limited purpose of the interpretation provisions of the Vienna Convention (1969)

It should be emphasized that the [Vienna Convention \(1969\)](#) set out with a limited purpose in including the interpretation provisions of articles 31 to 33. The Commentary on the [Vienna Convention \(1969\)](#) states that

[a]ccordingly the [International Law] Commission confined itself to trying to isolate and codify the comparatively few general principles which appear to constitute general rules for the interpretation of treaties.<sup>[41]</sup>

It should not be surprising that the effect of the Commentaries on the OECD Model, which are peculiar to the OECD Model and not found generally in other treaties, should not be covered (see sections 3.10. to 3.12. for consideration of the OECD Commentaries as an aid to interpretation of tax treaties). The reason why the International Law Commission wanted to set out a few general principles was that there were diverging opinions concerning interpretation, with some placing the main emphasis on the subjective intentions of the parties (for which they would apply *travaux préparatoires* liberally), some on the teleological (or object and purpose) approach, and others (the majority) emphasizing the primacy of the text, while giving some place to extrinsic evidence about the intentions of the parties and the object and purpose of the treaty. The conclusion of the International Law Commission on this debate was that the interpretation provisions are

based on the view that the text must be presumed to be the authentic expression of the intentions of the parties, and that, in consequence, the starting point of interpretation is the elucidation of the meaning of the text, not an investigation *ab initio* into the intentions of the parties.<sup>[42]</sup>

### 3.3. The distinction between primary and secondary interpretative material

The interpretation provisions of the [Vienna Convention \(1969\)](#) make a fundamental distinction between the general rule (“rule” in the singular is important) in article 31 (see section 3.4.) and supplementary means of interpretation in article 32 (see section 3.5.). The purpose of defining context, which is the largest element dealt with in [article 31 of the Vienna Convention \(1969\)](#), is, first, to limit the materials that are considered when applying that article. In practice, parties will refer the court to supplementary means as part of the argument, so that the court will be aware of their content. However, when coming to its decision it is always necessary for the court to find an interpretation according to article 31 of the [Vienna Convention \(1969\)](#) without using supplementary means of interpretation and then apply article 32 either “to confirm the meaning resulting from the application of Article 31”, and so, if it does not

41. Para. 5 [Vienna Convention: Commentary](#) (1969).

42. *Id.*, at para. 11.

confirm the meaning (and the second part of article 32 is inapplicable), the article 31 interpretation must stand and cannot be contradicted by supplementary means (but see section 3.5.1.2.). Second, [article 32 of the Vienna Convention \(1969\)](#) can be used to determine the meaning where the interpretation according to article 31: (i) leaves the meaning ambiguous or obscure; or (ii) leads to a result that is manifestly absurd or unreasonable. Both of these alternatives refer to a meaning already ascertained from article 31 of the Vienna Convention (1969) before article 32 can be used for those limited purposes.

In summary, these interpretative provisions are more about what can be considered to be part of the main rule of interpretation<sup>[43]</sup> and what can be used only in limited circumstances,<sup>[44]</sup> than about how the process of interpretation operates, thus confirming the statement of the Commentary on the Vienna Convention (1969) regarding the limited purpose of the interpretation provisions in the Vienna Convention (1969) (see section 3.1.). Essentially, therefore, these provisions, while limiting the material that may be used in coming to the primary interpretation under [article 31 of the Vienna Convention \(1969\)](#), do not tell the interpreter how to use them, apart from saying that the treaty is to be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context (as so defined), and in the light of its object and purpose (necessarily also determined by its terms). A great deal of leeway is, therefore, left to the interpreter.

### 3.4. Article 31 of the Vienna Convention (1969): General rule of interpretation

#### 3.4.1. The provision

[Article 31 of the Vienna Convention \(1969\)](#) reads:

1. A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose.

As noted in section 3.3., the heading of article 31 of the [Vienna Convention \(1969\)](#) is the “general rule” [in the singular] “of interpretation”, emphasizing that it is a single whole and not a hierarchy. As paragraph 8 of the Commentary on the Vienna Convention (1969) states, this is

intended to indicate that the application of the means of interpretation in the article would be a single combined operation. All the various elements, as they were present in any given case, would be thrown into the crucible, and their interaction would give the legally relevant interpretation. Thus, is entitled “General *rule* of interpretation” in the singular, not “General *rules*” in the plural, because the Commission desired to emphasize that the process of interpretation is a unity and that the provisions of the article form a single, closely integrated rule.<sup>[45]</sup>

#### 3.4.2. Article 31 of the Vienna Convention (1969): The elements

The elements in the single combined operation of interpretation in [article 31 of the Vienna Convention \(1969\)](#) are: (i) good faith (see section 3.4.3.); (ii) ordinary meaning (see section 3.4.4.); (iii) context

43. Art. 31 [Vienna Convention \(1969\)](#).

44. Id., at art. 32.

45. Para. 8 [Vienna Convention: Commentary](#) (1969).

(see sections 3.4.5. to 3.4.9.); and (iv) object and purpose (see section 3.4.10.). In this regard, the Commentary on the [Vienna Convention \(1969\)](#) states,

the first – interpretation in good faith – flows directly from the rule *pacta sunt servanda*. The second principle is the very essence of the textual approach: the parties are to be presumed to have that intention which appears from the ordinary meaning of the terms used by them. The third principle is one both of common sense and good faith; the ordinary meaning of a term is not to be determined in the abstract but in the context of the treaty and in the light of its object and purpose.<sup>[46]</sup>

### 3.4.3. Good faith

The treaty must be performed in good faith: the rule *pacta sunt servanda*. It follows logically that no interpretation of the treaty can fail to be made in good faith, as otherwise the performance of the treaty based on its interpretation would not be in good faith. The Commentary on the [Vienna Convention \(1969\)](#) explains that

[w]here a treaty is open to two interpretations one of which does and the other does not enable the treaty to have appropriate effects, good faith and the objects and purposes of the treaty demand that the former interpretation should be adopted. Properly limited and applied, the maxim does not call for an “extensive” or “liberal” interpretation in the sense of an interpretation going beyond what is expressed or necessarily to be implied in the terms of the treaty.<sup>[47]</sup>

It should be noted that statements, such as “liberal” interpretation, will impliedly be making a comparison with domestic law interpretation. Such statements are not helpful, as they are comparisons with each state’s domestic law. The application of good faith “is determined at any particular time by the compelling standards of honesty, fairness and reasonableness prevailing in the international community at that time”.<sup>[48]</sup> Good faith, therefore, requires that technicalities of interpretation do not apply. One apparent oddity is that [article 32 of the Vienna Convention \(1969\)](#) deals with the situation where the interpretation according to article 31 is absurd or unreasonable, which would not be expected to be the result of an interpretation made in good faith. Perhaps, the explanation is that other elements may be given greater weight so that, even where good faith has been tried and has failed to find a reasonable interpretation, the supplementary means are available to assist.

An important aspect of good faith is the extent to which article 3(2) of the OECD Model applies changes in domestic law occurring after the tax treaty is signed (see section 4.6.).

In the Netherlands, the *Hoge Raad* (Supreme Court, [HR](#)) in various cases based its decision on the good faith principle. For instance, in its decisions of 19 June 2009, the HR held that the exit tax on private pension claims with pension funds established in the Netherlands was incompatible with the good faith principle to be observed in the interpretation and application of the tax treaties.<sup>[49]</sup> The HR decided that this exit charge imposed by way of a preserving assessment to be enforced at a later time

46. Id., at para. 12.

47. Id., at para. 6.

48. J. F. O'Connor, *Good Faith in International Law* p. 109 (Dartmouth 1991).

49. NL: HR, 19 June 2009, [Cases 43.978, 07/13267, 08/02288](#), Tax Treaty Case Law IBFD.

in the event of realization other than through periodic payments was incompatible with that principle if it implied that, in fact, income, which was allocated for taxation, or potential taxation, to the states where the taxpayers emigrated to were to be taxed in the Netherlands. The assessment was computed on the basis of the fair market value of the pension claims at the time of emigration, deemed to be derived as taxable income at the time immediately preceding emigration. Finally, the HR took the view that this deeming provision could not have the effect that the taxable income would become excluded from the scope of the provisions of tax treaties regarding pensions. Another example is that the HR, in a decision of 18 November 2016,<sup>[50]</sup> relied on good faith to decide that the Netherlands-Portugal Income and Capital Tax Treaty (1999)<sup>[51]</sup> prevented the fictitious wages charged on a 5% shareholder of a Dutch company working for the company from applying to a resident of the treaty partner state, Portugal, which did not have any similar concept in its domestic law (see section 5.1.1.).

#### 3.4.4. Ordinary meaning

The ordinary meaning of words always depends on their context. Ordinary meaning is not a dictionary definition of a word divorced from the context. As was said by the Canadian Federal Court (FC) in *Gladden* (1985)<sup>[52]</sup> (cited with approval by the Supreme Court of Canada (SC) in *Crown Forest* (1995)),<sup>[53]</sup>

[a] literal or legalistic interpretation must be avoided when the basic object of the treaty might be defeated or frustrated in so far as the particular item under consideration is concerned.

While there can be several ordinary meanings, the applicable one must be chosen from the context of the treaty.<sup>[54]</sup> Words used in the treaty may be used in a different sense than domestic law and the treaty meaning should not be coloured by such domestic law meanings. See section 3.4.11. for the possibility of a special meaning applying.

#### 3.4.5. Context

##### 3.4.5.1. Article 31(2) of the Vienna Convention (1969): Definition of context

Article 31 of the Vienna Convention (1969) contains a wide, though not unlimited, definition of context to specify how far material other than the treaty itself (including the preamble and annexes) comprises material that may be used in the article 31 interpretative process, rather than supplementary means of interpretation (effectively, including all other relevant material, except for context that may be used for only limited purposes (see section 3.5.)). Context should, therefore, be regarded as meaning primary interpretative material. The first part of the definition of context is as follows:

2. The context for the purpose of the interpretation of a treaty shall comprise, in addition to the text, including its preamble and annexes:
  - (a) any agreement relating to the treaty which was made between all the parties in connection with the conclusion of the treaty;

50. NL: HR, 18 Nov. 2016, BNB 2017/34.

51. *Neth.-Port. Income and Capital Tax Treaty* (1999), Treaties IBFD.

52. CA: FC, 22 Jan. 1995, *Gladden v. Her Majesty the Queen*, [1985] 1 CTC 163 at 166-7, Tax Treaty Case Law IBFD.

54. Gardiner, *supra* n. 22, at pp. 183-184.

- (b) any instrument which was made by one or more parties in connection with the conclusion of the treaty and accepted by the other parties as an instrument related to the treaty.

### 3.4.5.2. Article 31(2) of the Vienna Convention (1969): Interpretation

The opening sentence relates to the treaty itself, including all parts of it. The material in [article 31\(2\) \(a\) and \(b\) of the Vienna Convention \(1969\)](#) is “in addition to the text” and, therefore, impliedly not part of the treaty, but is, nevertheless, effectively treated as if it were for interpretation purposes. All this material (and the material in article 31(3) of the [Vienna Convention \(1969\)](#) (see section 3.4.5.4.)) is context and is, therefore, given greater weight than supplementary means of interpretation within article 32 (see section 3.5.). It will be noted that all of these items have a bilateral element. The reason why these two items are limited to documents “in connexion with the conclusion of the treaty” is that it may not be clear whether or not statements made during negotiations represent the final agreement made by the parties; however, such material can still be considered, but only as supplementary means of interpretation within [article 32 of the Vienna Convention \(1969\)](#). Unilateral material is never part of the context, unless it has been accepted by the other parties as falling within article 31(2)(b) of the Vienna Convention (1969) (an example is that Canada has specifically agreed to the US Technical Explanations<sup>[55]</sup> to the Canada-United States Income and Capital Tax Treaty (1980)<sup>[56]</sup> and its subsequent Protocols) or is included as part of the text of the tax treaty, such as the reference to domestic law in article 3(2) of the OECD Model (see section 4.2.).

This provision merely says that the listed material is part of the context. It does not say what weight is to be given to it, which will depend on its nature. A definition provision in the tax treaty itself, such as resident of a contracting state, immovable property, and (for the purpose only of each of those articles) dividends, interest and royalties, will be used in a binding way to interpret the provision under consideration. An exception should be made where the definition is subject to the context “otherwise requiring”, as is the case with the definitions in article 3(1) of the OECD Model, when the possibility of its not being a binding interpretation for this reason must be considered (see section 5.1.2.). The definition is part of the context in which the terms of the treaty are being interpreted. (It should be noted that, in the OECD Model, context does not have the same meaning as the definition in the Vienna Convention (1969) (see section 4.4.).) As it is a definition, it is intended that it should be binding; in these circumstances, there is no room for the operation of the other elements of good faith, ordinary meaning, and object and purpose (except in relation as to whether or not the context otherwise requires where the definition is subject to this qualification). A definition in an agreement referred to in article 31(2)(a) of the Vienna Convention (1969) (or an instrument that is accepted by all parties within article 31(2)(b)) is in exactly the same category for interpretation purposes. The Commentary on the Vienna Convention (1969) explains that

55. Treasury Department Technical Explanation of the Convention between the United States of America and Canada with respect to Taxes on Income and on Capital Signed at Washington, D.C. on September 26, 1980, as Amended by the Protocol Signed at Ottawa on June 14, 1983 and the Protocol Signed at Washington on March 28, 1984 (1997), [Treaties IBFD](#); Treasury Department Technical Explanation of the Protocol Amending the Convention between the United States of America and Canada with respect to Taxes on Income and on Capital Signed at Washington on September 26, 1980, as Amended by the Protocols Signed on June 14, 1983 and March 28, 1984 (1997), [Treaties IBFD](#); Department of the Treasury Technical Explanation of the Protocol between the United States of America and Canada Signed at Ottawa on July 29, 1997 Amending the Convention between the United States of America and Canada with respect to Taxes on Income and on Capital Signed at Washington on September 26, 1980 as Amended by the Protocols Signed on June 14, 1983, March 28, 1984 and March 17, 1995 (1997), [Treaties IBFD](#); and Department of the Treasury Technical Explanation of the Protocol Done at Chelsea on September 21, 2007 Amending the Convention between the United States of America and Canada with respect to Taxes on Income and on Capital Done at Washington on September 26, 1980, as Amended by the Protocols Done on June 14, 1983, March 28, 1994, March 17, 1995, and July 29, 1997 (2007), [Treaties IBFD](#).

56. The Can.-US Income and Capital Tax Treaty (1980), [Treaties IBFD](#).

it is well settled that when an agreement as to the interpretation of a provision is established as having been reached before or at the time of the conclusion of the treaty, it is to be regarded as forming part of the treaty ... <sup>[57]</sup>

The Commentary on the Vienna Convention (1969) also points to the time of the conclusion of the treaty, which is suggested more strongly by the French version ("*à l'occasion de la conclusion du traité*") than the English version ("in connection with the conclusion of the treaty"). The word "agreement" is wider than the defined term "treaty",<sup>[58]</sup> which is restricted to written agreements governed by international law. It could, therefore, include an oral agreement, although this is unlikely in practice.

In circumstances in which [article 31\(2\)\(a\) and \(b\) of the Vienna Convention \(1969\)](#) is, therefore, not in point and where an undefined term or phrase is being interpreted (and article 3(2) of the OECD Model is inapplicable), the whole of the items comprising the context must be considered, but, as none of it has binding force for this purpose, it will be considered together with all the other elements (good faith, ordinary meaning, and object and purpose) together in reaching the interpretation.

#### 3.4.5.3. Article 31(2) of the Vienna Convention (1969): illustration

By way of illustration, the Explanatory Statement to the [MLI](#) states that it reflects the agreed understanding of the negotiators and that the 99 members of the ad hoc group adopted it at the same time as adopting the text of the convention. It is, therefore, context within the meaning of article 31(2)(a) of the [Vienna Convention \(1969\)](#) in relation to the 99 members of the ad hoc group; in relation to any other state, it would be context within the meaning of article 31(2)(b) only if such state accepted it as an instrument related to the MLI (see section [5.3.3.](#)). The joint Council of Europe and OECD Convention on Mutual Administrative Assistance in Tax Matters (1988),<sup>[59]</sup> which is a multilateral convention, has an Explanatory Report<sup>[60]</sup> commenting on each article in a similar manner to the Commentaries on the OECD Model. The Explanatory Report contains a statement to the effect that "[t]he text of the Explanatory Report prepared by the committee of experts and transmitted to the Committee of Ministers of the Council of Europe and the Council of the OECD and approved by OECD's Committee on Fiscal Affairs ... does not constitute an instrument providing an authoritative interpretation of the text of the Convention although it may facilitate the understanding of the Convention's provisions", which is a normal provision in Council of Europe treaties. It is suggested that it is part of the context, as it would still have been agreed by the contracting states.<sup>[61]</sup> However, in such a case, as a definition in it is expressly not an authoritative interpretation, it would be given less weight than a binding contemporaneous agreement, but appropriate weight should be given to it when considering all the elements together, and certainly more weight than if it had been contained in supplementary means of interpretation. In practice, therefore, such a non-binding definition will normally still prevail. If confirmed by practice, it may also achieve the status of subsequent practice (see section [3.4.7.](#)).<sup>[62]</sup> The European Court of

57. Para. 14 *Vienna Convention: Commentary* (1969).

58. Art. 2 *Vienna Convention* (1969).

59. *Convention between the Member States of the Council of Europe and the Member Countries of the OECD on Mutual Administrative Assistance in Tax Matters* (25 Jan. 1988), Treaties IBFD.

60. *Technical Explanation of the Convention between the Member States of the Council of Europe and the Member Countries of the OECD on Mutual Administrative Assistance in Tax Matters* (1 Sept. 1989), Treaties IBFD.

61. A non-binding Council of Europe Explanatory Report was so regarded in UK: [HL](#), 1989, *R v. Secretary of State for the Home Department ex p. Read*, [1989] AC 1014, 1052, per Lord Bridge. It would alternatively be a supplementary means of interpretation within article 32 of the Vienna Convention (1969); see section 3.5.

62. Gardiner, *supra* n. 22, at p. 273.

Human Rights (ECtHR) has also used non-binding material, such as recommendations and resolutions of the Committee of Ministers and the Parliamentary Assembly, as part of the context for interpretation purposes in *Demir and Baykara v. Turkey* (2008),<sup>[63]</sup> citing earlier authority. There is no reason to consider that this is incorrect in international law.

Treating the material in [article 31\(2\)\(a\) and \(b\) of the Vienna Convention \(1969\)](#) as context, particularly so if the interpretation is a binding one, can lead to problems with tax treaties where the tax treaty itself may go through a Parliamentary procedure, which is not only the process in dualist states, and the contemporaneous agreement may or may not be included in the process, and the subsequent agreement will normally not be included. While the agreement may be binding in international law between the states, it may not be binding in domestic law and, consequently, not binding on the taxpayer where the courts will determine the meaning without reference to the items in article 31(2) of the Vienna Convention (1969) if they have not been through the correct internal procedure. Even when it has, a court may find that there is a limit to what a subsequent agreement can do to change the meaning of a treaty.

#### 3.4.5.4. Article 31(3) of the Vienna Convention (1969): Further category of context

Article 31(3) adds a further category of context:

3. There shall be taken into account, together with the context:
  - (a) any subsequent agreement between the parties regarding the interpretation of the treaty or the application of its provisions;
  - (b) any subsequent practice in the application of the treaty which establishes the agreement of the parties regarding its interpretation;
  - (c) any relevant rules of international law applicable in the relations between the parties.

The opening words of this paragraph (“There shall be taken into account, together with the context”) are different from those of [article 31\(2\) of the Vienna Convention \(1969\)](#) (“The context ... shall comprise”). Any implication that these items are of lesser importance deriving from the difference is wrong, as it is part of the general rule in article 31, and such an interpretation is not supported by the preparatory works.<sup>[64]</sup> The other language versions do not suggest that any difference was intended. The French version says: “*Il sera tenu compte, en même temps que du contexte*”, which suggests that it is something to be taken into account at the same time as the context and so is equivalent to the context. The variation in wording is probably used to differentiate between real context, which is restricted to contemporaneous documents being intrinsic elements, and extrinsic elements, such as subsequent agreements and practice. These are still equivalent to context (or are treated as if they were context) and so are to be used as part of the interpretative process under article 31 of the [Vienna Convention \(1969\)](#), rather than as supplementary means of interpretation. This supports the suggestion that context really means primary interpretative material.

63. TR: ECtHR, 12 Nov. 2008, *Demir and Baykara v. Turkey* (No. 34503/97, at 74).

64. See Gardiner, *supra* n. 22, at p. 230. It was suggested in [CA: FCA](#), 30 Sept. 1996, *Coblentz v. Her Majesty the Queen*, [1997] 1 FC 368, Tax Treaty Case Law IBFD, that a subsequent agreement might be given less weight, but this was not necessary to the decision.

### 3.4.6. Subsequent agreements

The Commentary on the [Vienna Convention \(1969\)](#) describes article 31(3)(a) of the Vienna Convention (1969) as “a further authentic element of interpretation to be taken into account together with the context”. In exactly the same way as it says of the material in [article 31\(2\) of the Vienna Convention \(1969\)](#), it says of article 31(3)(a),

[s]imilarly, an agreement as to the interpretation of a provision reached after the conclusion of the treaty represents an authentic interpretation by the parties which must be read into the treaty for the purposes of its interpretation.<sup>[65]</sup>

A subsequent agreement would have to go through the same Parliamentary procedure as the treaty itself in order to become binding in domestic law in most countries. An example of this is that the following agreement was made in 2012<sup>[66]</sup> in relation to the Switzerland-United Kingdom Income Tax Treaty (1977) (together with the Protocols (1981), (1993), (2007) and (2009)):<sup>[67]</sup>

1. In respect of requests for information under Article 25 (Exchange of information) of the Convention, the following rule shall be applied and observed: while the details to be given when making a request for information are important procedural requirements that are intended to ensure that “fishing expeditions” do not occur, they nevertheless need to be applied in such a way as not to frustrate the effective exchange of information.
2. Accordingly, provided the request is not a fishing expedition, it is agreed that an administrative assistance request shall be complied with if the requesting State
  - a) identifies the person under examination or investigation; such identification may be provided by other means than by indicating the name and address of the person concerned, and
  - b) indicates, to the extent known, the name and address of any person believed to be in possession of the requested information.

In the United Kingdom, the agreement was approved by Parliament as a schedule to a statutory instrument<sup>[68]</sup> using the same procedure as is used for making tax treaties.

Where the tax treaty itself provides for subsequent agreements, as in the mutual agreement article, article 25(3) of the OECD Model stating that: “The competent authorities of the Contracting States shall endeavour to resolve by mutual agreement any difficulties or doubts arising as to the interpretation or application of the Convention”, the question arises in domestic law as to whether or not the Parliamentary approval given to the tax treaty containing this provision is sufficient Parliamentary approval to give effect to the agreement in domestic law. The [OECD Model \(2017\)](#) (like many earlier US tax treaties (see section 4.9.)) is even more explicit, in stating, “in particular the competent authorities

65. Para. 14 *Vienna Convention: Commentary* (1969).

66. Exchange of Letters of 3 and 6 May 2012.

67. The [Switz.-UK Income Tax Treaty](#) (1977), Treaties IBFD.

68. UK: Double Taxation Relief and International Enforcement (Switzerland) Order 2012.

of the Contracting States may agree ... to a common meaning of a term”, which is a clear delegation to them to make a binding subsequent agreement without further Parliamentary approval. In Spain, mutual agreements are published in the Official Gazette, although there may be delays and the agreements may be expressed to apply prior to their signature. For instance, the interpretative mutual agreement regarding limited liability corporations (LLCs) and S Corporations in the Spain-United States Income Tax Treaty (1990)<sup>[69]</sup> was signed in January-February 2006 and published in the Official Gazette on 13 August 2009, but it is stated to be effective from 1 January 1998.

### 3.4.7. Subsequent practice

The Commentary on the [Vienna Convention \(1969\)](#) explains with regard to [article 31\(3\)\(b\) of the Vienna Convention \(1969\)](#) that, in relation to subsequent practice which establishes the understanding of the parties regarding its interpretation,

the importance of such subsequent practice in the application of the treaty, as an element of interpretation, is obvious; for it constitutes objective evidence of the understanding of the parties as to the meaning of the treaty.<sup>[70]</sup>

Thus, where both states operate a treaty in the same way after the treaty has been concluded, the result is the same as if they had agreed that this was its interpretation, they saw no need to agree the interpretation as such. It should be noted that the rule is limited to subsequent practice that establishes the agreement of the parties regarding its interpretation, so that both (or all in a multilateral treaty) states must adopt the same practice, or at least knowingly accept the other state(s) doing so if the practice is inapplicable to one state. An unchallenged Foreign and Colonial Office circular giving guidance on whether a member of a diplomatic mission was permanently resident in the United Kingdom (and hence liable to tax) was accepted as subsequent practice in a UK tax case.<sup>[71]</sup> A borderline example of practice being applicable in only one state arose in the UK [SC](#), which was faced with the interpretation of the European Council Framework Decision (2002/584/JHA), as to whether or not a European Arrest Warrant ([EAW](#)) that had been issued by the Swedish public prosecutor (which has no equivalent in the United Kingdom and, consequently, no practice that could be relevant in the United Kingdom) had been issued by a “judicial authority” in accordance with article 6.<sup>[72]</sup> Subsequent practice was relied on by Sweden in that 11 Member States had designated a prosecutor as the issuing judicial authority. In this respect, Lord Dyson (one of the majority) said,

[t]he fact that it is only in the majority (and not all) of the Member States that the issuing judicial authority is a judge is not inconsistent with the existence of an agreement established by subsequent practice that a public prosecutor may be a judicial authority within the meaning of the Framework Decision. There is nothing to suggest that Member States which do not have public prosecutors as their issuing judicial authorities criticise those that do. More particularly, we have been shown no evidence that, until the present case, any executing state objected to surrendering a person on the grounds that the EAW was issued by a public prosecutor. In my view, this is powerful

69. The [Spain-US Income Tax Treaty](#) (1990), Treaties IBFD.

70. Para. 15 *Vienna Convention: Commentary* (1969).

71. UK: [SpC](#), 23 June 2004, *Jimenez v. IRC*, [2004] STC (SCD) 371, at para. 69.

72. UK: [SC](#), 30 May 2012, *Assange v. The Swedish Prosecution Authority*, [2012] UKSC 22.

evidence that even those Member States whose issuing judicial authorities are judges acquiesce in EAWs being issued in other Member States by public prosecutors. That is a sufficient practice to establish agreement by the Member States.<sup>[73]</sup>

On the other hand, Lady Hale (in the course of a dissenting judgement) did not consider that this was sufficient to establish the agreement of the parties:

While the *practice* need not be that of all the parties to the treaty (as in this case it obviously is not) the practice has to be such as to establish the *agreement* of all the parties as to its interpretation. Given the lack of common or concordant practice between the parties, is the failure to date of those countries which do not authorise prosecutors and other bodies to object to those who do sufficient to establish their agreement? Nobody in this country seems to have addressed their mind to the issue until it arose in this case. Failure to address minds to an issue is not the same as acquiescence in a particular state of affairs.<sup>[74]</sup>

A similar issue could arise with a tax treaty where the tax treaty made no change to the domestic law of one state and so it was only in the other state that subsequent practice was relevant.

#### 3.4.8. Relevant rules of international law

The reference in [article 31\(3\)\(c\) of the Vienna Convention \(1969\)](#) to any relevant rules of international law means that the interpretation of a treaty must be considered in the light of the rules of international law at the time it was entered into. The wording used in the treaty being interpreted would have been chosen taking into account the state of the law at the time, and so both are properly part of the context. In an earlier draft of the [Vienna Convention \(1969\)](#), there was a reference to the relevant rules in force at the time of the conclusion of the treaty. These were deleted, as they failed to deal with the problem of the effect of an evolution of the law on the interpretation of legal terms in a treaty. However, the law at the time of when the treaty was concluded would seem to be of greater importance. As Sir Ian Sinclair explains,

there is scope for the narrow and limited proposition that the evolution and development of the law can be taken into account in interpreting certain terms in a treaty which are by their very nature expressed in such general terms as to lend themselves to an evolutionary interpretation. But this must always be on condition that such an evolutionary interpretation does not conflict with the intentions and expectations of the parties as they may have been expressed during the negotiations preceding the conclusion of the treaty.<sup>[75]</sup>

An example of the use of this provision is contained in a decision of the [ICJ](#):

---

<sup>73.</sup> Id., at 131.

<sup>74.</sup> Id., at 191.

<sup>75.</sup> *The Vienna Convention on the Law of Treaties* 2nd edn, p. 140 (Manchester U. Press 1984).

The Court cannot accept that Article XX, paragraph 1(d), of the 1955 Treaty was intended to operate wholly independently of the relevant rules of international law on the use of force, so as to be capable of being successfully invoked, even in the limited context of a claim for breach of the Treaty, in relation to an unlawful use of force. The application of the relevant rules of international law relating to this question thus forms an integral part of the task of interpretation entrusted to the Court by Article XXI, paragraph 2, of the 1955 Treaty.<sup>[76]</sup>

An earlier tax treaty between the same parties would qualify under this heading, as the later tax treaty being interpreted was made in the light of the earlier tax treaty. For instance, a difference in wording between the tax treaties might indicate an intention that they were not to have the same meaning; or, alternatively, the difference in wording may have been included because of a change in domestic law, without the intention of it having any wider implication.<sup>[77]</sup> It is possible that the Commentaries on the OECD Model should, by analogy, be included in this category as material that is in the minds of both parties when negotiating the tax treaty and the closest material that exists to accepted international tax rules (see section 3.11.1.).

It has been suggested<sup>[78]</sup> that EU law may qualify as a relevant rule of international law for this purpose, thus enabling its use to determine the meaning of terms that are undefined in the treaty but defined in EU law. EU law seems to be accepted as being part of international law, and so this provision is potentially applicable. For the use of EU law in connection with article 3(2), see section 4.5.

### 3.4.9. Material excluded from context

The point has been made in section 3.4.5.1. that the definition of context is wide, but not unlimited. Material that is not context and, therefore, is, at best, supplementary means of interpretation is considered in section 3.5., and will include the following five items: (i) preparatory work (*travaux préparatoires*) of the treaty in question; (ii) the wording of other tax treaties to which one of the states was a party (but an earlier or later tax treaty between the same parties would be context, as would some non-tax treaties, including the [Vienna Convention \(1969\)](#) itself, as containing relevant rules of international law applicable in the relations between the parties within article 31(3)(c)); (iii) decisions of courts in other states on the same treaty wording; (iv) domestic law in the treaty partner states; and (v) writings of experts. Accordingly, this material can be considered for the limited purposes set out in article 32, in respect of which see section 3.5.

### 3.4.10. Object and purpose

The object and purpose of a treaty may be demonstrated by the preamble to the treaty or any other document that is context. Object and purpose are objective concepts, necessarily so, as, if the parties are in dispute regarding the interpretation of a treaty, it is unlikely that they will have the same subjective intentions. This is also necessarily a secondary consideration to the text and context, which are to be interpreted in the light of its (the treaty's) object and purpose. Logically, therefore, it is necessary to start with the words of the text that is being interpreted, which is considered at the same time in its (documentary) context, which, in turn, because of the definition of context, may include material not

<sup>76</sup>. IR/US: ICJ: 6 Nov. 2003, *Iran v. United States*, at 41.

<sup>77</sup>. For an example, see UK: SC, 1 July 2015, *Anson v. HMRC*, [2015] UKSC 44, Tax Treaty Case Law IBFD, at para. 96.

<sup>78</sup>. F. Avella, *Using EU Law To Interpret Undefined Treaty Terms: Article 31(3)(c) of the Vienna Convention on the Law of Treaties and Article 3(2) of the OECD Model Convention*, 4 World Tax J. 2 (2012), Journals IBFD.

forming part of the treaty, such as contemporaneous agreements and subsequent agreements and practice, and then look at this material in the light of the object and purpose of the treaty as a whole as demonstrated by those documents. The OECD Model contained a footnote from 1992 stating that “States wishing to do so may follow the widespread practice of including in the title a reference to either the elimination of double taxation or to both the elimination of double taxation and the prevention of fiscal evasion”. This referred to evasion, but not avoidance, although some tax treaties included both. This was useful in showing the object and purpose of the treaty.<sup>[79]</sup> The MLI has expanded the preamble to include reference to both evasion and avoidance. It now reads as follows:

(State A) and (State B) ... Intending to conclude a Convention for the elimination of double taxation with respect to taxes on income and on capital without creating opportunities for non-taxation or reduced taxation through tax evasion or avoidance (including treaty-shopping arrangements aimed at obtaining reliefs provided in this Convention for the indirect benefit of residents of third States [or, in article 6(1) of the MLI, residents of third jurisdictions]) ...

This is also emphasized in the opening paragraph of the Explanatory Statement, which states as follows:

The Multilateral Convention to Implement Tax Treaty Related Measures to Prevent Base Erosion and Profit Shifting (the Convention) is one of the outcomes of the OECD/G20 Project to tackle Base Erosion and Profit Shifting (the “BEPS Project”) i.e. tax planning strategies that exploit gaps and mismatches in tax rules to artificially shift profits to low or no-tax locations where there is little or no economic activity, resulting in little or no overall corporate tax being paid.

It is obviously intended that the preamble should have more importance in future. Paragraph 23 of the Explanatory Statement to the MLI states that “[t]he inclusion of this reference in the preamble to the Convention is intended to clarify the intent of the Parties to ensure that Covered Tax Agreements be interpreted in line with the preamble language foreseen in Article 6(1)”.

### 3.4.11. Article 31(4) of the Vienna Convention (1969): Special meaning

Article 31(4) of the Vienna Convention (1969) provides as follows:

4. A special meaning shall be given to a term if it is established that the parties so intended.

This paragraph deals with the case that the parties intended a special meaning, rather than the apparent meaning of the term in its context. The official French version refers to “*un sens particulier*”, which means a “particular meaning”, so that the English “special” should not be interpreted as meaning an exceptional meaning. In context, a technical meaning may become the ordinary meaning. This is particularly true in the context of tax treaties, where tax expressions frequently have a meaning that is different from the ordinary meaning of the words (for example, the difference between the phrases “liable to tax” and “subject to tax” (see section 5.2.3.2.) or between “avoidance” and “evasion”, which it seems the MLI intends to continue to apply (see the discussion regarding the French equivalents in paragraph 80 of the Explanatory Statement and section 5.2.3.4.)). It should be noted that a special meaning applies only if it is established that the parties so intended. As article 31(4) is part of article 31 of the

<sup>79</sup>. OECD Model Tax Convention on Income and on Capital (1 Sept. 1992), Models IBFD.

[Vienna Convention \(1969\)](#), supplementary means cannot be used to establish this, although they can confirm it. The Commentary on the Vienna Convention (1969) seems to regard the special meaning as an alternative to the ordinary meaning in the context, in which case its use is still subject to the other elements (good faith, object and purpose). However, as the special meaning applies only if it is established that the parties so intended, it is closer to a contemporaneous agreement on interpretation, which is “to be regarded as forming part of the treaty”<sup>[80]</sup> and is, therefore, determinative, leaving no room for the application of the other elements. This conflict may be more apparent than real, as there seems little scope for the other elements to apply in practice if the parties intend a term to have a special meaning.

It has been suggested that the Commentaries on the OECD Model fit this paragraph well. For the use of the OECD Commentaries as a means of interpretation, see sections 3.10. to 3.12. The same could be said of the Explanatory Statement to the MLI in relation to its provisions that change Covered Tax Agreements (CTAs); in relation to the provisions of the MLI itself, the Explanatory Statement would be context within the meaning of the Vienna Convention (1969) (see section 5.3.3.).

### **3.5. Article 32 of the Vienna Convention (1969): Supplementary means of interpretation**

#### **3.5.1. The provisions**

##### **3.5.1.1. Article 32 of the Vienna Convention (1969): The text**

[Article 32 of the Vienna Convention \(1969\)](#) reads as follows:

Recourse may be had to supplementary means of interpretation, including the preparatory work of the treaty and the circumstances of its conclusion, in order to confirm the meaning resulting from the application of article 31, or to determine the meaning when the interpretation according to article 31:

- (a) leaves the meaning ambiguous or obscure; or
- (b) leads to a result which is manifestly absurd or unreasonable.

##### **3.5.1.2. Article 32 of the Vienna Convention (1969): Interpretation**

The Commentary on the [Vienna Convention \(1969\)](#) emphasizes the supplementary nature of [article 32 of the Vienna Convention \(1969\)](#):

The word “supplementary” emphasizes that article 32 does not provide for alternative, autonomous, means of interpretation but only for means to aid an interpretation governed by the principles contained in article 31.<sup>[81]</sup>

[Article 32 of the Vienna Convention \(1969\)](#) expressly limits the use of supplementary means (i) “to confirm the meaning resulting from the application of article 31”; or (ii) “to determine the meaning when the interpretation according to article 31: (a) leaves the meaning ambiguous or obscure; or (b) leads to a result which is manifestly absurd or unreasonable”. The Commentary of the Vienna Convention

<sup>80.</sup> Para. 14 *Vienna Convention: Commentary* (1969).

<sup>81.</sup> Id., at para. 19.

(1969) explains that “the Commission considered that the exception must be strictly limited, if it is not to weaken unduly the authority of the ordinary meaning of the terms”.<sup>[82]</sup>

Nonetheless, the Commentary on the Vienna Convention (1969)<sup>[83]</sup> earlier recognizes that, in practice in court proceedings, the court of its own motion or the parties will refer the court to supplementary means as part of the argument, so that the court will be aware of their content. However, before basing its decision on supplementary means, it is necessary to determine a meaning by the use of [article 31 of the Vienna Convention \(1969\)](#) alone as required by the wording of both limbs. Accordingly, in interpreting a tax treaty, a separation should be made between article 31 of the Vienna Convention (1969) and the use of any supplementary means by article 32. It also follows that, in the last resort, if the supplementary means do not confirm the meaning resulting from article 31 of the Vienna Convention (1969), it cannot override it. However, in practice, if the supplementary means do not confirm the meaning resulting from article 31 of the Vienna Convention (1969), this may demonstrate the existence of another possible meaning under article 31, which can be confirmed by the supplementary means; or it may disclose an ambiguity that had not previously been seen, which can be resolved by the supplementary means.<sup>[84]</sup> The supplementary means and the circumstances of the conclusion of the treaty may shed light on the object and purpose of the treaty provision, but strictly it is the object and purpose of the treaty as a whole that is relevant to article 31 of the Vienna Convention (1969). The preparatory works of the Vienna Convention (1969) itself indicate that the process of treaty interpretation is intended to be a unity even though consisting of various elements, that there is no “rigid line” between articles 31 and 32 and that the elements set out in the Convention were not intended to be exhaustive of the principles and maxims used in practice in the interpretation of treaties.<sup>[85]</sup> The main purpose of articles 31 and 32 of the Vienna Convention (1969) is to establish the primacy of the treaty text in interpretation.

### 3.5.1.3. *Travaux préparatoires*

The usual supplementary means of interpretation for treaties generally is the preparatory work (*travaux préparatoires*), but these are normally of little importance for tax treaties, which are negotiated in secret with no *travaux préparatoires* being published (though, see section [3.13](#) for the possibility of accessing this material in national archives). However, a taxpayer before the Canadian Tax Court (TC) succeeded in obtaining an order for discovery of the *travaux préparatoires* of one article of the relevant tax treaty.<sup>[86]</sup> Whether or not this is possible in other countries depends on domestic law. Because of the words “including the preparatory work”, supplementary means are not limited to *travaux préparatoires*, which are not defined: “the Commission did not think that anything would be gained by trying to define *travaux préparatoires*; indeed, to do so might only lead to the possible exclusion of relevant evidence”.<sup>[87]</sup> [Article 32 of the Vienna Convention \(1969\)](#) also refers to “the circumstances of its [the treaty’s] conclusion”, which in normal cases will relate to the historical setting in which the treaty was entered into. This is unlikely to have much relevance to tax treaties, which are not usually entered into because of a particular historical imperative.

<sup>82.</sup> Id.

<sup>83.</sup> Id., at para. 18.

<sup>87.</sup> Para. 20 *Vienna Convention: Commentary* (1969).

### 3.5.1.4. Foreign court decisions

More relevant as possible supplementary means of interpretation are foreign court decisions<sup>[88]</sup> on the same treaty wording (normally that of the OECD Model) that seem to be impossible to fit within the material of [article 31 of the Vienna Convention \(1969\)](#) (see section 3.4.), the writings of experts (the work of Vogel (1997)<sup>[89]</sup> has been widely cited by courts (see section 3.5.2.)), and (if it is not part of the context by analogy, or containing a special meaning) the Commentaries on the OECD Model. Unilateral material may be used as supplementary means of interpretation, but with care, as there is no certainty that the other state agrees with it. If the other state does not agree, it has no value as an aid to interpretation. Comparisons are sometimes made with the wording of other treaties. Since each treaty is negotiated separately and any difference in wording may be explained by the requirements of the other country in the second treaty rather than that the different wording was intended to have a different meaning, this has limited value as an aid to interpretation.

### 3.5.2. The use of decisions on treaty interpretation in other countries

It is obviously desirable that courts faced with a treaty interpretation issue, particularly one on the widely used wording of the OECD Model, should be aware of how courts in other countries have decided the same issue. Such decisions on the same treaty wording must qualify as supplementary means of interpretation (see section 3.5.) and may be used for the limited purposes permitted for supplementary means. Being aware of such decisions is not the same as being bound to follow them, although it should help to ensure a common interpretation of widely used provisions. As was said in a UK [HL](#) case in relation to a non-tax treaty (the CMR Convention on the Contract for the International Carriage of Goods by Road),

[i]f a corpus of law had grown up overseas which laid down the meaning of [a particular treaty provision], our courts would no doubt follow it for the sake of the uniformity which it is the object of the convention to establish.<sup>[90]</sup>

However, in another decision on the same treaty, the UK Court of Appeal ([CA](#)) referred to 30 decisions of continental European courts leading to 12 different interpretations of the treaty.<sup>[91]</sup>

The status of the foreign court is important, as is the respect that courts in the same country would give to the decision. As Lord Diplock said in the UK HL case of *Fothergill v. Monarch Airlines* (1980)<sup>[92]</sup> in relation to the Warsaw Convention (1929) on carriage of goods by air,

[a]s respects decision of foreign courts, the persuasive value of a particular court's decision must depend on its reputation and its status, the extent to which its decisions are binding on courts of co-ordinate and inferior jurisdiction in its own country and the coverage of the national law reporting system. For instance your Lordships would not be fostering uniformity of interpretation of the convention if you were to depart from the prima facie view which you had yourselves formed as

88. In this respect, see W. Wijnen, [Some Thoughts on Convergence and Tax Treaty Interpretation](#), 67 Bull. Intl. Taxn. 11 (2013), Journals IBFD.

89. K. Vogel: *Klaus Vogel on Double Taxation Conventions* 3rd edn (Kluwer L. Intl 1997).

90. Viscount Dilhorne in UK: HL, 9 Nov. 1977, [James Buchanan & Co Ltd v. Babco Forwarding and Shipping Ltd](#), [1977] 3 All ER 1048, 1060.

91. UK: CA, 13 Jan. 1977, *Ulster-Swift Ltd. v. Taunton Meat Haulage Ltd.*, [1997] 1 WLR 625.

92. UK: HL, 10 July 1980, *Fothergill v. Monarch Airlines*, [1980] 2 All ER 696.

to its meaning in order to avoid conflict with a decision of a French court of appeal that would not be binding on other courts in France, that might be inconsistent with an unreported decision of some other French court of appeal and that would be liable to be superseded by a subsequent decision of the Court of Cassation that would have binding effect on lower courts in France.<sup>[93]</sup>

Another important matter is that care needs to be taken that, if the other country's court was influenced by the Commentaries on the OECD Model (which can be the case even though the court does not expressly refer to them), these were the same at the time of the conclusion of the tax treaty being considered by the court. Given the small amount of litigation on tax treaties in most countries with the result that judges have limited experience of interpreting tax treaties (or, in some countries, treaties generally), the benefit of looking at decisions of the courts of other countries to giving treaty terms a common meaning is significant. In practice, the decisions of the courts of other countries have been used little in interpreting tax treaties, but there are signs that this is changing. Given the wider availability of material, particularly material in English, this change is desirable.

Examples of decisions of courts in other countries being considered can be found mainly between common law countries, where looking at decisions in other common law countries is quite normal, but reference to decisions on treaty interpretation (country of the decision in brackets) can be found in common law countries in Australia (many decisions from both common law and civil law countries), Canada (Australia, Belgium, Finland, France, India, Norway, the United Kingdom and the United States), India (Australia, Canada, Germany, Switzerland, the United Kingdom and the United States), New Zealand (Germany), South Africa (Canada and the United Kingdom), the United Kingdom (Canada, Finland, Germany, the Netherlands, New Zealand, South Africa, Sweden and the United States) and the United States (Canada and Germany). Referring to foreign court decisions is much less common in civil law countries, but has been done by the courts in Argentina (Canada, France, Spain, the United Kingdom and the United States), Brazil (Finland, France, Japan, Mexico, the Netherlands and Sweden), Germany (Austria, Luxembourg, Switzerland, the United Kingdom and the United States), Italy (France, Germany and the United States), the Netherlands (Germany), Japan (France), Spain (Norway and France), and Switzerland (Germany). In France, although the courts have not relied on foreign decisions, several *rapporteurs publics* (formerly *commissaires du gouvernement*) before the *Conseil d'Etat* (Supreme Administrative Court, [CE](#)) have referred to such decisions in the opinion they have delivered. Italian and Mexican courts have never referred to decisions by courts in other countries.

It has sometimes been suggested<sup>[94]</sup> that use of court decisions should be limited to decisions on the same treaty, but there is no reason in principle why this should be so. Any decisions on the same treaty wording could be relevant as an aid to interpretation.

The same is true of the willingness of courts to refer to writers, who may also cite other countries' court decisions. As mentioned in section 3.5.1.4., the work of Vogel (1997 and subsequent editions) has been widely used. Courts vary considerably in the amount of writings that they are willing to quote, with the United Kingdom at the end of the scale where quotation is least usual, although there is now a greater willingness to do so than before, and Austria and Germany at the other end where it is extremely common. As Lord Diplock said in *Fothergill v. Monarch Airlines* in relation to the Warsaw Convention

<sup>93.</sup> Id., at 708.

<sup>94.</sup> For instance, before the Federal Court of Australia ([FCA](#)) in AU: [FC](#), 1977, *Lamesa Holdings BV v. Commissioner of Taxation*, [1997] FCA 785, Tax Treaty Case Law IBFD, the FCA would have accepted decisions on the treaty partner on other tax treaties).

(1929) on carriage by air: “[t]he persuasive effect of learned commentaries ... will depend upon the cogency of their reasoning”.<sup>[95]</sup>

### 3.6. Summary of the rules of the Vienna Convention (1969)

As stated in section 3.3., an important distinction is made between the primary method of interpretation in [article 31 of the Vienna Convention \(1969\)](#), which has to be carried out in all cases, and the use of supplementary means of interpretation that can be used only to confirm interpretation under article 31 or to determine the meaning that is ambiguous or obscure or leads to a manifestly absurd or unreasonable result. The primary purpose of defining context is to limit the materials that can be used to obtain the meaning of article 31 of the [Vienna Convention \(1969\)](#) and, therefore, the context represents the primary interpretative material. If a definition is found in the context, that definition is to be used (unless the definition is itself subject to the context “otherwise requiring”) (see section 3.4.5.). Beyond that, the Vienna Convention (1969) says very little as to what the interpreter should do with the materials, other than using good faith, ordinary meaning, and the object and purpose of the treaty. Interpretation is, therefore, essentially an exercise of the interpreter’s judgement.

After establishing a meaning under article 31, the interpreter can turn to supplementary means of interpretation within article 32 for the purposes set out in [article 32 of the Vienna Convention \(1969\)](#). It is, nonetheless, intended that the interpretation process be a unity rather than a hierarchy.

### 3.7. Different language versions of a treaty and country practice in tax treaties in using a third language

#### 3.7.1. Divergence of meaning in different official language versions

##### 3.7.1.1. Article 33 of the Vienna Convention (1969): The text

[Article 33 of the Vienna Convention \(1969\)](#) deals with treaties authenticated in two or more languages. This reads as follows:

1. When a treaty has been authenticated in two or more languages, the text is equally authoritative in each language, unless the treaty provides or the parties agree that, in case of divergence, a particular text shall prevail.
2. A version of the treaty in a language other than one of those in which the text was authenticated shall be considered an authentic text only if the treaty so provides or the parties so agree.
3. The terms of the treaty are presumed to have the same meaning in each authentic text.
4. Except where a particular text prevails in accordance with paragraph 1, when a comparison of the authentic texts discloses a difference of meaning which the application of articles 31 and 32 does not remove, the meaning which best reconciles the texts, having regard to the object and purpose of the treaty, shall be adopted.

---

<sup>95.</sup> *Fothergill* (1980), *supra* n. 92.

### 3.7.1.2. Article 33 of the Vienna Convention (1969): Interpretation

Normally, a tax treaty will have official versions in the languages of each of the states (and sometimes one of the states will use more than one language in its treaties, such as Belgium and Canada) that are equally authoritative. In some cases, tax treaties provide that a third language version will prevail in case of divergence of meanings of the first two language versions (see section 3.7.2.). The [Vienna Convention \(1969\)](#) distinguishes between authenticated and merely official texts, but this distinction will not arise with tax treaties. As each language version is equally authentic, there is nothing wrong with the natural tendency for courts to rely only on their own language version of a tax treaty and only deal with differences where these are pointed out. In other disputes between states in international law, it is more common for different language versions to be in issue, as each state will rely on its language version to support its position. With tax, the dispute is normally confined to one state and so other language versions are less likely to be in issue.

### 3.7.1.3. Commentary on the Vienna Convention (1969)

The Commentary on [Article 33 of the Vienna Convention \(1969\)](#) makes the following important point:

But it needs to be stressed that in law there is only one treaty – one set of terms accepted by the parties and one common intention with respect to those terms – even when two authentic texts appear to diverge.<sup>[96]</sup>

Naturally, the normal methods of interpretation are applied to each language version to see if there is a difference in meaning. Differences in language versions potentially create an ambiguity that is not evident in either of the different language texts considered separately, as the treaty might equally well mean what each language says. Such an ambiguity has to be resolved using the same methods as if it arose in one language: try to find a single meaning by applying [article 31 of the Vienna Convention \(1969\)](#) and, if that is not possible, use supplementary means in accordance with article 32 to resolve the ambiguity. [Article 33\(4\) of the Vienna Convention \(1969\)](#) adds a further method if none of the previous ones resolves the ambiguity. The Commentary on Article 33 of the [Vienna Convention \(1969\)](#) expressly rejects any other methods, such as favouring the text with a clear meaning or the language version in which the treaty was drafted.<sup>[97]</sup> While these are rejected as a general rule, the effect of applying articles 31 and 32 of the Vienna Convention (1969) may be to give preference to either of these in a particular case.

### 3.7.1.4. One language version to explain another version

Sometimes one language version may help to explain the other. For instance, in relation to the [Canada-United States Income and Capital Tax Treaty \(1980\)](#), which is in English and French, the Canadian Federal Court of Appeal ([FCA](#)) referred to the French text of the tie-breaker for individuals to explain the English text:

<sup>96.</sup> Para. 6 [Vienna Convention: Commentary on Article 33 \(1969\)](#).

<sup>97.</sup> Id., at para. 9.

The concept of “habitual abode”, as evidenced by the clearer French version of the text (*séjourne de façon habituelle*) involves notions of frequency, duration and regularity of stays of a quality which are more than transient.<sup>[98]</sup>

### 3.7.1.5. Differences result from the use of technical terms

Commonly, the difference in languages will be the result of tax technical terms not translating exactly. An example from a French case before the CE <sup>[99]</sup> concerned the refund of the *avoir fiscal* under the former France-United Kingdom Income Tax Treaty (1968)<sup>[100]</sup> when the taxpayer was a UK resident taxed on the remittance basis (i.e. the amount brought into the United Kingdom) when the dividends were not remitted. The tax treaty had the usual “liable to tax” test for residence, but also contained a provision that stated in the English version that the refund “shall not apply if the recipient of the dividends ... is not *subject to United Kingdom tax* in respect of those dividends” (emphasis added). If the dividends were not remitted to the United Kingdom, they would not be subject to tax and so the refund would not apply according to the English version. The French version said: “*n’est pas assujetti à l’impôt au Royaume-Uni à raison de ces dividendes*” (emphasis added), which is the same French expression used in relation to the “liable to tax” test in article 4(1) of the tax treaty, under which he would qualify for the refund because he would be liable to tax if the dividends were remitted. The CE applied the English version having regard to the purpose of the provision which was to avoid double taxation. Using the French version would result in no taxation. The ambiguity could be resolved in accordance using [article 31 of the Vienna Convention \(1969\)](#) having regard to object and purpose. The difference between liable to tax and subject to tax in English and French is dealt with in section [5.2.3.2. Article 79 of the Vienna Convention \(1969\)](#) contains a procedure for the retrospective correction of errors in a treaty (see section [3.8.5.](#)), which could include errors caused by differences in language versions, although this may not be appropriate for use in relation to a tax treaty because of the retrospective element.

### 3.7.1.6. Other sources of divergence

On other occasions, the divergence may be due to the fact that the underlying legal concepts do not translate exactly because the same concept does not exist in the other system. This arises particularly between common law and civil law. For instance, one state may make a distinction between income and capital gains and the other state may consider that capital gains are included in income. A reference to “income” in the tax treaty may mean something different to each. In the OECD Model, where there is a capital gains article and the title refers to taxes on income and on capital, capital gains are regarded as a type of income. The relief articles, referring to “derives income” would provide for relief from tax where the other state taxes capital gains. In actual tax treaties, the result may be different because of the context. In UK tax treaties, although both income and capital gains can be taxed on the remittance basis, the treaty provision dealing with unremitted income is usually drafted in terms of income only and the question arises as to whether or not this drafting should be read as including capital gains. The Swedish *Regeringsrätten* (Supreme Administrative Court, [RÅ](#)),<sup>[101]</sup> in interpreting a provision in the Sweden-United Kingdom Income Tax Treaty (1960) added in the Protocol (1968),<sup>[102]</sup> which referred to “income from a source”, by a majority decided that it did not. “Income from a source” has a meaning

98. CA: FCA, 10 June 2010, [Lingle v. Her Majesty the Queen](#), (2010) 12 ITLR 996.

99. FR: CE, 27 July 2012, Case Nos. 337656 and 337810, [Ministre du Budget c Regazzacci](#).

100. The [Fr.-UK Income Tax Treaty](#) (1968), Treaties IBFD.

101. SE: RÅ, 23 Dec. 1987, [Case 1169-1987, RÅ 1987, ref. 162](#), Tax Treaty Case Law IBFD.

102. The [Swed.-UK Income Tax Treaty](#) (1960), Treaties IBFD.

in UK tax law that is not applicable to capital gains, as they do not have a source but depend on the *situs* of the asset. Nor do capital gains have a source in Sweden. The context pointed to the provision applying to income and not capital gains, although the object and purpose of the provision would have been better served if capital gains had been included, as otherwise Sweden would have to relieve a capital gain from tax that was not taxed in the United Kingdom because it was not remitted.<sup>[103]</sup>

### 3.7.1.7. Article 33(4) of the Vienna Convention (1969): The last resort rule

Article 33(4) of the Vienna Convention (1969) is a rule of last resort, rather than the one that will normally be used. Examples of cases in international law generally show that it is generally possible to resolve the dispute without recourse to article 33(4) of the Vienna Convention (1969). In the last resort, the meaning that best reconciles the texts, having regard to the object and purpose of the treaty, should be applied. While the object and purpose of a treaty is one of the components of interpretation under article 31 of the Vienna Convention (1969) that will already have been considered along with other elements and will not necessarily have been conclusive, here it is given decisive force. Normally, this will mean preferring one language version over another. In a tax treaty, the result is likely to be the one that avoids double taxation and results in single taxation rather than double taxation or double non-taxation, or, particularly if the revised preamble substituted by the MLI applies (see section 3.4.10.), the one that prevents tax avoidance.

### 3.7.1.8. Dualist countries

An issue in dualist countries is that only the local language version (or versions) is incorporated into legislation and, therefore, given effect in law. In such circumstances, is it possible to refer to the other authentic language version? It is suggested that it should be, as the home language version contains a statement that both language versions are equally authentic and so it is a part of the local language version that the other version is equally authentic and, therefore, should be consulted in case there is a divergence in meaning. Support for this approach is provided by a UK case on the CMR Convention on the Contract for the International Carriage of Goods by Road where the English and French texts were equally authentic, but only the English text had been incorporated into the statute giving effect to the treaty in UK law, which would be the same in relation to a tax treaty (see section 3.5.2.). The UK HL has also stated that it was perfectly legitimate to look for assistance to the French text.<sup>[104]</sup> In some cases, the Dutch *Hoge Raad* (Supreme Court, HR) has taken another language version into account. One case concerned the deduction of alimony and support payments under the Belgium-Netherlands Income and Capital Tax Treaty (1970).<sup>[105]</sup> In answering the question as to whether or not those payments were covered by the phrase “personal allowances, reliefs and deductions on account of civil status or family responsibilities” in article 25(3) of the tax treaty, the HR took the French version into consideration.<sup>[106]</sup> A second example concerned the interpretation of the term “temporarily” regarding the application of the 183-day rule in article 10(2) of the Germany-Netherlands Income and Capital Tax Treaty (1959),<sup>[107]</sup> in respect of which the HR looked at both the Dutch and German language versions.<sup>[108]</sup> Germany has also accepted that, although the legislation giving effect to the treaty (*Zustimmungsgesetz*) is in German, this does not prevent it from considering the other official language.

103. For a note on this case from the UK perspective, see J.F. Avery Jones & J.D.B. Oliver, *How Others See Us*, Brit. Tax Rev., p. 437 (1988) and, from the Swedish point of view, see P. Sundgren, *Interpretation of Tax Treaties – A Case Study*, Brit. Tax Rev., p. 286 (1990).

107. The Ger.-Neth. Income and Capital Tax Treaty (1959), Treaties IBFD.

108. NL: HR 29 Sept. 1999, Cases 33.267 and 34.482, Tax Treaty Case Law IBFD.

### 3.7.2. Country practice in using a third language prevailing text or single third language text

It is not uncommon with tax treaties for the tax treaty to provide that, in addition to the authentic texts in each of the treaty partners' languages, a third language text, often English, prevails in case of divergence of meanings. This is commonly used where the treaty partners are not familiar with the other state's language and do not want to be at risk that the other language version might prevail in the case of a difference. It is safer to use a third language with which both treaty parties are familiar, particularly one where there is an official OECD version. In such cases, it is necessary first to establish that there is a divergence of meaning between the languages, without attempting to resolve it, and then apply the third language text that is to prevail. In practice, states might try to resolve the difference between the original two languages first before accepting that there is a divergence of meaning. The matter is probably one of degree.<sup>[109]</sup>

In order to give an indication of the extent of the use of a prevailing third language version in tax treaties, in a survey of European countries in 2005,<sup>[110]</sup> it was found that 22 Austrian, 20 Belgian, 29 German, 42 Italian, 39 Netherlands and 37 Swiss tax treaties had adopted this approach in their tax treaties. Although this count has not been updated, there is no reason to suppose that the picture will be different now, and the practice is not confined to European countries. France and Canada never use this approach. It is also uncommon for English-speaking countries, but the India-United Kingdom Income Tax Treaty (1993)<sup>[111]</sup> has equally authoritative versions in English and Hindi, but with English having priority in the case of divergence in meaning. Alternatively, some states may not use their own language at all, but just have a third language version; for example, the Albania-Belgium Income Tax Treaty (2002)<sup>[112]</sup> is only in English and the same was true of 25 other Belgian tax treaties in the 2005 survey.<sup>[113]</sup> There are 23 Japanese treaties in English only and the same is true of a substantial number of Dutch and Swedish treaties.

## 3.8. Other relevant articles of the Vienna Convention (1969)

### 3.8.1. Article 27 of the Vienna Convention (1969): Internal law and observance of treaties

Article 27 of the Vienna Convention (1969) provides that

[a] party may not invoke the provisions of its internal law as justification for its failure to perform a treaty. This rule is without prejudice to Article 46. [Article 46 deals with the formation of treaties and says that a state may not invoke that its consent to be bound by a treaty was expressed in violation of a provision of its internal law regarding competence to concluding treaties.]

While tax treaties necessarily prevail over domestic law and so the situation envisaged in this article should not apply, it can be relevant to tax treaties that have not been properly implemented into domestic law or when later internal law overrides the tax treaty. These situations are dealt with in section 2.2. This aspect is one where there can be a conflict between international law dealt with in this article, under which a state cannot use domestic law as a justification for its failure to perform a treaty and domestic

<sup>109.</sup> Para. 4 [Vienna Convention: Commentary on Article 33](#) (1969).

<sup>110.</sup> See [Multilingual Texts and Interpretation of Tax Treaties and EC Tax Law](#) secs. 8.4., 9.7., 11.7., 12.6.1., 13.5. and 14.8. (G. Maisto ed., IBFD 2005), Online Books IBFD.

<sup>111.</sup> The [India-UK Income Tax Treaty](#) (1993), Treaties IBFD.

<sup>112.</sup> The [Alb.-Belg. Income and Capital Tax Treaty](#) (2002), Treaties IBFD.

<sup>113.</sup> Maisto ed., *supra* n. 110, at sec. 9.7.

law that will necessarily be applied in domestic courts in cases where the treaty does not apply from the domestic law point of view. Accordingly, this rule effectively has no operation on tax treaties, but a breach would entitle the other state to terminate the tax treaty (see section 3.8.3.).

### 3.8.2. Article 28 of the Vienna Convention (1969): Non-retroactivity of treaties

Article 28 of the Vienna Convention (1969) provides that

[u]nless a different intention appears from the treaty or is otherwise established, its provisions do not bind a party in relation to any act or fact which took place or any situation which ceased to exist before the date of the entry into force of the treaty with respect to that party.

A tax treaty will always state the period from which it starts to apply, the normal formula being that the treaty enters into force after instruments of ratification are exchanged (either immediately or after a set period) and will then have effect with respect to taxes levied for fiscal years beginning on or after a particular date. Issues of retroactivity will not, therefore, normally apply, but they can arise in relation to exchange of information and assistance in collection particularly when these are added to an existing tax treaty. The issue is whether or not they are subject to the same starting period as the treaty itself. A UK case related to a protocol that added an assistance-in-collection article and substituted a new exchange-of-information article, both relating to all taxes, stating that they applied to requests made on or after the date of the protocol. Specifically, the UK CA held that they were not also subject to the starting provision of the tax treaty itself (which was expressed to apply only to taxes covered by the tax treaty), and so had retrospective effect subject only to any general law limits that were cut down by an unpublished Memorandum of Understanding.<sup>[114]</sup>

### 3.8.3. Article 60 of the Vienna Convention (1969): Termination for breach

Article 60 of the Vienna Convention (1969) provides as follows:

1. A material breach of a bilateral treaty by one of the parties entitles the other to invoke the breach as a ground for terminating the treaty or suspending its operation in whole or in part.
2. [relates to multilateral treaties]
3. A material breach of a treaty, for the purposes of this article, consists in:
  - (a) a repudiation of the treaty not sanctioned by the present Convention; or
  - (b) the violation of a provision essential to the accomplishment of the object or purpose of the treaty.
4. The foregoing paragraphs are without prejudice to any provision in the treaty applicable in the event of a breach.

114. UK: CA, 23 May 2013, (1) *Ben Nevis (Holdings) Ltd* (2) *Metlika Trading Limited v. Commissioners for HM Revenue & Customs*, [2013] EWCA Civ 578, Tax Treaty Case Law IBFD. See also J. Schwarz, *Tax Treaty Interpretation after Ben Nevis (Holdings) Ltd v. Her Majesty's Revenue and Customs* (2013), 68 Bull. Intl. Taxn. 1 (2014), Journals IBFD.

5. Paragraphs 1 to 3 do not apply to provisions relating to the protection of the human person contained in treaties of a humanitarian character, in particular to provisions prohibiting any form of reprisals against persons protected by such treaties.

It would be under this provision that a state could terminate a tax treaty for material breach by the other party. Tax treaties typically provide for termination by notice after a relatively short specified period of operation, commonly 6 months, so that a party that wishes to terminate can do so without the need to rely on breach. In the past, tax treaties were rarely terminated even under this notice provision. More recently, termination on notice has become more common.

#### **3.8.4. Article 70 of the Vienna Convention (1969): Consequences of the termination of a treaty**

[Article 70](#) states that termination of a treaty in accordance with its provisions or in accordance with the [Vienna Convention \(1969\)](#): (i) releases the parties from any obligation further to perform the treaty; and (ii) does not affect any right, obligation or legal situation of the parties created through the execution of the treaty prior to its termination. In relation to tax treaties, where a tax treaty replaces an earlier one, the new tax treaty sometimes contains a provision to the effect that the earlier tax treaty continues to apply for a limited period if it is more favourable. Where income has accrued during the earlier tax treaty and is paid after the new tax treaty comes into force, domestic law would normally provide that the relevant time for application of the tax treaty is when the income is recognized for tax purposes.

#### **3.8.5. Article 79 of the Vienna Convention (1969): Correction of errors**

[Article 79 of the Vienna Convention \(1969\)](#) contains provisions for correcting errors with retrospective effect where the parties are agreed on the error. So far as the author is aware, this has not been used in relation to tax treaties, as the retrospective effect may not be appropriate in the tax area and because of the need for the amendment to go through the appropriate domestic Parliamentary procedure to be effective. Normally, therefore, correction of errors will be done via a protocol.

### **3.9. State succession**

Although not dealt with in the [Vienna Convention \(1969\)](#), it is convenient to deal here with the problems that have arisen with tax treaties over changes in the status of states, including: (i) formerly dependent territories becoming independent; (ii) states reunifying as with Germany; and (iii) states splitting as in respect of Czechoslovakia, the Union of Soviet Socialist Republics (USSR) and Yugoslavia. There is a Vienna Convention on Succession of States in respect of Treaties (1978), which few states have signed and which only came into force in 1996 when 15 states (all newly independent states) had signed. This treaty does not reflect modern state practice, much of which arose after it was negotiated in 1978. Customary rules of international law, therefore, mostly continued to apply to other states. If a new state does not want to be bound by existing treaties, the treaty partner will, in practice, have to accept this. In any event, as tax treaties can normally be terminated on short notice, commonly 6 months, the problem can be resolved in this way if a state does not wish to be bound by a tax treaty.

State succession is addressed in [section 5.1.1. of the GTTC Chapter on Article 3](#).

### **3.10. The Commentaries on the OECD Models**

In discussing the relevance of the Commentaries on the OECD Models to treaty interpretation, a firm distinction must be made between: (i) the OECD Commentaries current when the particular tax treaty was concluded, which is dealt with in [section 3.11.](#); and (ii) later OECD Commentaries, which by

definition cannot have been in the minds of the treaty negotiators, which is dealt with in section 3.12. The time the tax treaty was concluded probably means when it was signed as the tax treaty will not change after this and subsequently changes to the OECD Commentaries are unlikely to be considered when the tax treaty is going through a ratification process. However, there may be exceptions where the countries concerned are OECD member countries who will know about changes in the OECD Commentaries in advance and, on the other hand, where signing is held up (as in the case of the Austria-Italy Income Tax Treaty (1981)),<sup>[115]</sup> which is known to have been negotiated in 1974 and not changed before signing in 1981). The courts in most countries have referred to the OECD Commentaries, although there are no examples of such reference in Brazil or Singapore.

One qualification regarding the version of the Commentaries on the OECD Model existing at the time of the conclusion of a tax treaty that should be mentioned is that in 1974, the OECD issued revised texts of 20 articles (not articles 5, 14, 15, 17, 20, 23 or 28 to 30) and Commentary of the OECD Draft (1963),<sup>[116]</sup> which were substantially in the form of the OECD Model (1977).<sup>[117]</sup> Some tax treaties after this time and before the OECD Model (1977) would have been negotiated on the basis of those texts. It may, therefore, be permissible to refer to the Commentaries on the OECD Model (1977)<sup>[118]</sup> to the extent that this is the same. For instance, the Spain-United Kingdom Income and Capital Tax Treaty (1975)<sup>[119]</sup> contains a number, but by no means all, of the changes from the [OECD Draft \(1963\)](#) contained in the 1974 document and was presumably negotiated on the basis of it, with the departures from it being the deliberate result of negotiations. In addition, as the OECD has adopted the practice in recent years of releasing drafts of revisions to the OECD Commentaries, in many cases some years before final inclusion in the OECD Commentaries, the same approach may be appropriate for such changes.

Naturally, if a state has made an observation disagreeing with the interpretation in the Commentaries on the OECD Model, such an interpretation cannot be used against that state. A distinction may also need to be made between the relevance of the OECD Commentaries in a tax treaty between two OECD member countries and between other states, although, if the non-OECD member country is one of the 31 states whose positions are included in the OECD Model, there seems no reason to treat them differently if they have not made any observation disagreeing with the OECD Commentaries. As far as other states are concerned, if they adopt wording from the OECD Model in their tax treaties, whether or not concluded with an OECD member country, it is reasonable to assume that they were aware of the content of the OECD Commentaries when doing so. There are examples of states accepting the use of the OECD Commentaries in relation to a tax treaty involving a non-OECD member country, both in courts in an OECD member country, such as in the Norwegian *Høyesterett* (Supreme Court, [HS](#))<sup>[120]</sup> regarding the Ivory Coast-Norway Income Tax Treaty (1978)<sup>[121]</sup> and also, more significantly, in a non-OECD member country, before the Indian Income Tax Appellate Tribunal ([ITAT](#))<sup>[122]</sup> regarding the Canada-India Income Tax Treaty (1985).<sup>[123]</sup> Accordingly, no distinction in this respect is made in discussing this issue.

### 3.11. Current Commentaries on the OECD Model

#### 3.11.1. The provisions

##### 3.11.1.1. The Commentaries on the OECD Models and the Vienna Convention (1969)

Not surprisingly, there is no reference to the Commentaries on the OECD Models in the [Vienna Convention \(1969\)](#), as commentaries on a model treaty are unusual. It is, however, not unusual to find an explanatory report to a multilateral treaty, such as the Explanatory Statement to the [MLI](#) (see section 5.3.3.). The joint [Council of Europe and OECD Convention on Mutual Administrative Assistance in Tax Matters \(1988\)](#) has been mentioned above (see section 3.4.5.3.). It was suggested there that, although it is stated that the Explanatory Report does not constitute an instrument providing an authoritative interpretation of the text of the Convention, it would still be context within the meaning of the Vienna Convention (1969), as it would have been “an agreement relating to the treaty which was made between all the parties in connexion with the conclusion of the treaty”.<sup>[124]</sup> The OECD Commentaries are of a similar status, also being non-binding, but different in that the tax treaty to be interpreted is a bilateral one, based on the OECD Model, rather than a multilateral one, to which the Explanatory Report relates (although, at the time of the [OECD Draft \(1963\)](#), a multilateral treaty based on it was still under consideration). The point has already been made (see section 3.1.) that the interpretative provisions of the Vienna Convention (1969) have a limited function:

[T]he [International Law] Commission confined itself to trying to isolate and codify the comparatively few general principles which appear to constitute general rules for the interpretation of treaties.

The Commentaries on the OECD Model do not fit well into the definition of context, not being an agreement (assuming that they can be said to represent an agreement of OECD member countries) relating to the particular treaty and made in connection with its conclusion (and similarly for [article 31\(2\)\(b\) of the Vienna Convention \(1969\)](#), although this deals with multilateral treaties and so is not directly relevant to bilateral tax treaties). It is suggested in section 3.11.2.2. that they might be treated as context by analogy.

##### 3.11.1.2. The non-binding nature of the Commentaries on the OECD Model

The Commentaries on the OECD Models themselves make the point that they are not intended to be binding:

Although the Commentaries are not designed to be annexed in any manner to the conventions signed by member countries, which unlike the Model are legally binding international instruments, they can nevertheless be of great assistance in the application and interpretation of the conventions and, in particular, in the settlement of any disputes.<sup>[125]</sup>

If the Commentaries on the OECD Model say that something must be (or must not be) included within the meaning of a term, then, if the OECD Commentaries were binding, it would mean that a court could not decide that it is not (or is) so, even when such a decision would be within the ordinary meaning of the

<sup>124.</sup> Art. 31(2)(a) *Vienna Convention* (1969).

<sup>125.</sup> Para. 29 [OECD Model: Commentaries: Introduction](#) (2017).

term. In practice, this situation is unlikely and normally this is a grey area where the ordinary meaning of a term might or might not include (or exclude) something. An example is the meaning of the phrase “being present” in a state “for a period or periods not exceeding in the aggregate 183 days in any twelve months” in article 15 of the OECD Model. The Commentary on Article 15 of the OECD Model says that parts of a day are included and that days spent in transit in the course of a trip between two points outside the state of activity are excluded.<sup>[126]</sup> It is possible for a court to decide on the ordinary meaning of the term “present” in its context that only whole days count (at the time of the [OECD Report \(1992\)](#) on the 183-day rule two countries (or three in relation to days of departure if not related to the activity) did say this, and in one of them, the Irish [HC](#) subsequently confirmed in relation to counting days for the purpose of the residence article, which in the tax treaty concerned had a reference to the number of days of presence, that parts of a day did not count (*Kinsella* (2007)<sup>[127]</sup>), which is discussed in section 5.1.2.4.2.4.), or to decide that (assuming parts of a day are included) a part of a day in transit is a day of presence. If the OECD Commentaries are legally binding, such decisions would be wrong. On the other hand, it is equally possible for a court to decide that parts of a day counted, or that a person was not present in a real sense while in transit (there was one state that took this view in the [OECD Report \(1992\)](#)), and so in such a case it would not matter whether or not the OECD Commentaries are binding.

The fact that the Commentaries on the OECD Model are not binding does not mean that they cannot fall within [article 31 of the Vienna Convention \(1969\)](#). It has already been suggested that an Explanatory Report that was not binding as to interpretation would still be within the definition of “context”. To continue with the example of the 183-day rule, if a court were faced with the two issues mentioned in the previous paragraph in this section and it were permissible to read the Commentaries on the OECD Model as part of the interpretative process under article 31 of the [Vienna Convention \(1969\)](#), the court would be likely to consider that the interpretation in the OECD Commentaries is a possible one within the ordinary meaning of the term, perhaps backed up by the object and purpose, and decide in favour of that interpretation. It can always be said that the ordinary meaning, or even an agreed meaning (being context but not part of the treaty), is not as such binding because the other elements (good faith, object and purpose) might trump it in any particular circumstances, although in practice, this would be unlikely. It seems, therefore, that whether or not the OECD Commentaries are binding has relatively little significance.

### 3.11.1.3. Other possibilities

One other possibility that has already been mentioned (see section 3.4.11.) is that the Commentaries on the OECD Model may indicate a special meaning of a term, in which case it has to be established that the parties intended this, i.e. with [article 31\(4\) of the Vienna Convention \(1969\)](#) (see section 3.11.2.).

It has also been suggested that the Commentaries on the OECD Model, while not binding as such, are effectively binding on the basis of acquiescence (by not protesting against a proposal by one party the other party can be taken as agreeing to it tacitly) or estoppel (one party representing that a fact exists that the other party relies on so that the other party is led to believe that the first party agrees), which are concepts recognized in international law. The relevance of these concepts is that, if OECD member countries (and some non-OECD member countries) disagree with the OECD Commentaries, they have the opportunity of making an observation (see section 3.11.3. for the meaning of this) or stating this during negotiations in respect of the tax treaty in question. It is argued by proponents of

<sup>126.</sup> Para. 5 [OECD Model: Commentary on Article 15](#) (2017).

<sup>127.</sup> IE: HC, 31 July 2007, [Kinsella v. Revenue Commissioners](#) [2007] IEHC 250; (2007) 10 ITLR 63.

this suggestion that if states do not do so, they must be taken as having agreed to the interpretation in them (see section 3.11.3.).

In addition, a suggestion has been made that the Commentaries on the OECD Model have become customary international law (see section 3.11.4.).

Finally, as a last resort, the Commentaries on the OECD Model may be supplementary means of interpretation within [article 32 of the Vienna Convention \(1969\)](#) (see section 3.11.5.). All these possibilities will be considered in turn.

### **3.11.2. The Commentaries on the OECD Model and article 31 of the Vienna Convention (1969)**

#### **3.11.2.1. An issue of principle?**

The principal issue is whether the Commentaries on the OECD Models should be used as part of the process under [article 31 of the Vienna Convention \(1969\)](#) or whether they should be limited to use as supplementary means, in which case they can be used only to confirm a meaning already established, or to resolve the meaning where the meaning established without their use is ambiguous or obscure, or gives a manifestly absurd or unreasonable result. Looking at the matter as one of principle, the former seems desirable and in accordance with the presumed intention of the parties. While the OECD Commentaries are by no means limited to matters of interpretation, given their central relevance to the OECD Model on which the wording of the particular tax treaty being interpreted is likely to be based, why should their use be deliberately confined to the limited permissible purposes under [article 32 of the Vienna Convention \(1969\)](#)? There seems no point in the interpreter deliberately closing his eyes to the OECD Commentaries when coming to the primary decision on the interpretation under article 31. In nature, they are closer to the more normal Explanatory Report to a multilateral treaty like the [MLI](#) (see section 5.3.3.), which is clearly part of the context. It has been suggested that it would still be context if the Explanatory Report stated that it was non-binding, as is the case with the joint [Council of Europe and OECD Convention on Mutual Administrative Assistance in Tax Matters \(1988\)](#), because it would have been agreed by the contracting parties. Historically, at the time of the [OECD Draft \(1963\)](#), it was possible that the Draft would be the basis for a multilateral tax treaty, either between groups of countries, particularly European countries, or, as an ultimate objective, between all of the OECD member countries.<sup>[128]</sup> Accordingly, the OECD Commentaries were originally designed to serve the same purpose as the Explanatory Report. If the OECD Commentaries would have been context had the OECD Draft (1963) developed into a multilateral convention, it seems illogical not to give them the same weight in relation to bilateral tax treaties. The main difference is that when entering into a multilateral agreement states will no doubt take the Explanatory Report more seriously because they are becoming bound by the treaty and the Explanatory Report (even though an explanatory report may state that it does not contain an authoritative interpretation of the treaty) and will have to make a reservation if they want to avoid this. Both of these are clearly within the meaning of context in the [Vienna Convention \(1969\)](#). But they might take the OECD Commentaries less seriously when they are not entering into a particular tax treaty or in agreeing to something that is within the definition of context (and, at least in theory, may never enter into a bilateral tax treaty containing a particular wording). While they should still make a reservation or observation, there is less impetus to do so. The difference seems to be one of slight degree rather than a major one. The conclusion is that one should consider the OECD Commentaries to be context by analogy even though they do not fit the wording of the Vienna Convention (1969).

<sup>128.</sup> OECD, [Introduction to the Draft, Possibilities Concerning the Implementation of the Draft Convention III.B](#) paras. 57-61 (OECD 1963).

### 3.11.2.2. Interpretation of the OECD Model by analogy to article 31(3)(c) of the Vienna Convention (1969)

The Commentaries on the OECD Model are perhaps more analogous to [article 31\(3\)\(c\) of the Vienna Convention \(1969\)](#), although they almost certainly do not fit the words of “relevant rules of international law applicable in the relations between the parties” not being binding rules, on the basis that they are material that both parties (and that is true whether or not they are both OECD member countries) have in their minds as background material when they are negotiating and are, therefore, the closest material that exists to accepted international tax rules. In this respect, the US Court of Federal Claims (CFC) in *National Westminster Bank* (1999)<sup>[129]</sup> said of the OECD Commentaries that they “are presumed to have been in the minds of the negotiators when they drafted the treaty”.

### 3.11.2.3. Article 31 of the Vienna Convention (1969) generally

It should be said that, even if the Commentaries on the OECD Model are used as part of the process under [article 31 of the Vienna Convention \(1969\)](#), all that this means is that they may be considered as part of the primary interpretation process. Their meaning will not necessarily be followed, as other elements (good faith, ordinary meaning, and object and purpose) may be given greater weight, although if the OECD Commentaries establish a clear meaning this is perhaps unlikely.

While there is no support in the definition of “context” for this approach, the use of the Commentaries on the OECD Model would not be prevented on the basis that the [Vienna Convention \(1969\)](#) merely sets out to “codify the comparatively few general principles which appear to constitute general rules for the interpretation of treaties”. On that basis, the use of other interpretative material is possible and the meaning given by the OECD Commentaries could be a factor, probably a very strong factor, to be taken into account as part of the interpretation process either as indicating the ordinary meaning of the terms in the tax context in which they appear or as additional context that the Vienna Convention (1969) might have mentioned had it been drawn to their attention (if it is necessary to find a peg in the Convention to hang them on, which it is suggested it is not).

### 3.11.2.4. The contrary argument

The contrary argument to that advanced in section [3.11.2.3](#) is that ordinary meaning should be the meaning that it would convey to a reader (in the context of a tax treaty), rather than some technical meaning explained by the Commentaries on the OECD Model. For instance, “permanent home” and “the state with which his personal and economic relations are closer” are ordinary language that would be understood by anyone. The Commentary on Article 4 of the OECD Model gives some explanations that may, or may not, be within the ordinary meaning, such as, in relation to permanent home, a rented furnished room qualifying and accommodation for attending a course at a school not qualifying, and that the dwelling must be available at all times continuously.<sup>[130]</sup> Whether this is confirming the ordinary meaning or expanding on it may depend on the facts, for example, how long is the school course? In relation to closer personal and economic relations, the OECD Commentary on Article 4 says “it is nevertheless obvious that considerations based on the personal acts of the individual must receive special attention”.<sup>[131]</sup> The author of the latter statement (and, hence, the OECD) considered it obvious that personal relations were more important than economic relations, in which case he (and the OECD) would say that this is the ordinary meaning of the term. Others, including perhaps a reader from France

<sup>129</sup>. US: CFC, 27 July 1999, *National Westminster Bank v. United States*, (1999) 1 ITLR 725, 737, Tax Treaty Case Law IBFD.

<sup>130</sup>. Para. 13 *OECD Model: Commentary on Article 4* (2017).

<sup>131</sup>. *Id.*, at para. 15.

where centre of economic interests is a criterion for domestic law residence,<sup>[132]</sup> might say that it was not so obvious, in which case the OECD Commentaries are giving it a special meaning. The conclusion is that there will be some cases where the OECD Commentaries confirm the ordinary meaning, in which case it does no harm to apply them as part of the interpretation process. However, in others, where the OECD Commentaries are not explaining the ordinary meaning, but expanding on it, or changing it, that will not be sufficient and it will be necessary to rely on [article 31\(4\) of the Vienna Convention \(1969\)](#) as considered in section 3.4.11.

### 3.11.2.5. Relevant tax cases

The US Court of Appeals (CA) has referred to the Commentaries on the OECD Model as part of the “entire context” (an expression used in earlier cases to indicate part of the interpretation process, rather than something specifically related to the [Vienna Convention \(1969\)](#), which the United States has not ratified) of the tax treaty in *National Westminster Bank* (2008).<sup>[133]</sup> In the Australian HC, in *Thiel* (1990),<sup>[134]</sup> Dawson J said,

[f]or my part, I do not see why the OECD Model Convention and Commentaries should not be regarded as having been made in connection with and accepted by the parties to a bilateral treaty subsequently concluded in accordance with the framework of the Model.

However, he referred to doubts that had been expressed about this and turned to [article 32 of the Vienna Convention \(1969\)](#), and McHugh J relied on article 32. The SC of Canada in *Crown Forest* (1995)<sup>[135]</sup> regarded the OECD Commentaries as part of the “legal context” to be used “without the need to first find an ambiguity before turning to such materials”, thus suggesting that legal context equated to context in article 31 of the Vienna Convention (1969) and not to the supplementary means of article 32. This statement was made in agreeing with the US government’s submission (as intervener in the case), which had stated that a court may refer to extrinsic materials that form part of the legal context (using the term “context” in a different sense to the Vienna Convention (1969) that would regard article 31(2) as intrinsic, and article 31(3) as extrinsic material). This is similar to common law statutory interpretation, which regards material similar to [article 31\(2\) of the Vienna Convention \(1969\)](#) as legal context, rather than extrinsic material.<sup>[136]</sup> Using that distinction between legal context and extrinsic material would put the OECD Commentaries into part of the context of article 31(2) of the Vienna Convention (1969). In Spain, the *Tribunal Supremo* (Supreme Court, TS) has referred to the OECD Commentaries as “context”, against which tax treaties should be interpreted.<sup>[137]</sup> In the Netherlands, in some cases of the HR, the OECD Commentaries have been treated as context.<sup>[138]</sup> In Mexico, the OECD Commentaries are regarded as a privileged source of interpretation of tax treaties based on article 31(2)(a) of the Vienna Convention (1969).<sup>[139]</sup>

### 3.11.2.6. Article 31(4) of the Vienna Convention (1969) and the OECD Model

Article 31(4) of the [Vienna Convention \(1969\)](#) seems to be a strong candidate for supporting the use of the Commentaries on the OECD Model as part of the article 31 process. Normally, the significance of a special meaning is to put the burden of proof on the person contending for it. But in the context of the OECD Model, it would not be difficult to say that the parties intended that a meaning clearly set out in the OECD Commentaries, even though non-binding, should be used for interpretation. The OECD Model and the OECD Commentaries are a combined work that is familiar to those who negotiate tax treaties, whether or not their state is an OECD member country. The examples given regarding the tie-breaker in respect of individuals may be cases of giving ordinary words a special meaning in the particular context, as is the distinction between the phrases “liable to tax” and “subject to tax” (see section [5.2.3.2.](#)).

Article 31(4) of the [Vienna Convention \(1969\)](#) gives the meaning of a term in the Commentaries on the OECD Model a higher status than if the Commentaries are taken into account with other elements as part of the general article 31 process. Article 31(4) of the Vienna Convention (1969) is strongly worded, leaving little or no room for the use of the other elements in article 31(1): “[a] special meaning *shall* be given to a term if it is established that the parties so intended” (emphasis added). It is analogous to a contemporaneous agreement on interpretation that is to be “regarded as forming part of the treaty”<sup>[140]</sup>. There is an apparent conflict between the OECD Commentaries stating that they are not binding and the contracting states intending that the meaning of a term in the Commentaries shall apply, in which case the meaning in the Commentaries is binding. This conflict may be more apparent than real, as it is not the nature of the OECD Commentaries that makes the meaning binding, but the agreement between the parties intending that an otherwise non-binding meaning should be binding (or even that it should be binding subject to the other elements to be taken into account). As a practical matter, the meaning of a term given by the OECD Commentaries is likely to have been intended by the parties. The fact that both states intend the meaning of a term given by the OECD Commentaries does not mean that there will be no disputes about the interpretation, as it is the taxpayer who may be disputing the correctness of the meaning. Even if article 31(4) of the Vienna Convention (1969) effectively makes the meaning in the OECD Commentaries binding on the states, there is still the issue of whether or not it is binding on the taxpayer who wishes to argue for a different meaning. In such circumstances, it may also be the case that the practice of both parties subsequent to the entering into of the tax treaty establishes their agreement regarding its interpretation, but that may not be admissible in domestic law (see section [3.14.](#)).

### 3.11.3. The Commentaries on the OECD Model binding by acquiescence or estoppel

#### 3.11.3.1. The matter in question

It has been suggested by Douma and Engelen (2008)<sup>[141]</sup> that a meaning of a term set out in the Commentaries on the OECD Model is effectively binding by acquiescence or estoppel (the meanings of which are explained in section [3.11.1.3.](#)). The argument for its application is if a state fails to indicate, whether by making an observation that they do not agree with the OECD Commentaries on a particular point or by not stating its disagreement during negotiations for the particular tax treaty, it is presumed to have acquiesced in the interpretation in the OECD Commentaries. Therefore (it is argued), when entering into a particular tax treaty, a tacit agreement is made based on the failure to

<sup>140.</sup> Para. 14 *Vienna Convention: Commentary* (1969).

<sup>141.</sup> [The Legal Status of the OECD Commentaries](#) (S. Douma & F. Engelen eds., IBFD 2006), Online Books IBFD.

make an observation when the OECD Commentaries were made or to say that it disagreed with the Commentaries when the actual tax treaty was concluded.

In only one case has the ICJ based its decision on acquiescence and estoppel, although in a number of other cases parties have been unsuccessful in arguing it.<sup>[142]</sup> Both concepts require that the party which remained silent was under an obligation to say that it disagreed with some proposition. In practice, states do not seem to regard themselves as being under this obligation in relation to the Commentaries on the OECD Model, and there are situations where states have not made an observation but are known to disagree with the OECD Commentaries.<sup>[143]</sup> The fact that the OECD Commentaries are expressly not binding makes it more difficult to argue that there was an obligation on a state: (i) to make an observation; and (ii) to tell the other state during negotiations for an actual tax treaty that it disagreed with an interpretation in the Commentaries.<sup>[144]</sup> The point should be made that many statements in the OECD Commentaries are not strictly interpretative but descriptive, as when they say that most OECD member countries do something. Those OECD member countries who do not, see no need to make an observation, saying that this because the OECD Commentaries are not setting out an interpretation, but are, rather, stating a fact about what states do in practice.

### 3.11.3.2. Observations by States on the Commentaries on the OECD Model

The Introduction to the OECD Model states as follows:

30. Observations on the Commentaries have sometimes been inserted at the request of Member countries that are unable to concur in the interpretation given in the Commentary on the Article concerned. These observations thus do not express any disagreement with the text of the Convention, but usefully indicate the way in which those countries will apply the provisions of the Article in question. Since the observations are related to the interpretations of the Articles given in the Commentaries, no observation is needed to indicate a country's wish to modify the wording of an alternative or additional provision that the Commentaries allow countries to include in their bilateral conventions.

(On the last point, if an alternative or additional provision that the Commentaries on the OECD Model allow is adopted, the Commentaries may also say something about the interpretation of such other provision so that the same point can arise.) The quotation is interesting in showing that the observation is a warning to other states that, if they conclude a tax treaty, the interpretation given in the observation will be applied by the state making it when the wording of the OECD Model is used. It does not go as far as saying that the state will be correct in applying the tax treaty in this way. Nor does the quotation suggest that states are under an obligation to make an observation. Indeed, the first sentence suggests that observations are made only if the state requests it. The tax treaty can have only one meaning and if one state says in advance that it will apply it in a particular way (in accordance with its observation) and the other state applies it in a different way (in accordance with the OECD Commentaries), it still needs to be decided which interpretation is the correct one. That quotation also comes shortly after the statement in the OECD Commentaries that they are not intended to be legally binding. Reading these

<sup>142</sup>. H. Thirlway, *The Role of the International Law Concepts of Acquiescence and Estoppel*, in Douma & Engelen, *supra* n. 141. See also KH/TH: ICJ, 11 Nov. 2013, *Temple of Preah Vihear*.

<sup>143</sup>. D.A. Ward, *Is There an Obligation in International Law of OECD Member Countries To Follow the Commentaries on the Model?*, in Douma & Engelen, *supra* n. 141, at sec. 12.

<sup>144</sup>. Thirlway, *supra* n. 142.

two together seems to show, in the author's view, that, if the OECD Commentaries are not binding, it is unlikely that a tacit agreement caused by not making an observation disagreeing with the interpretation in the Commentaries should be any more binding, and nor should a state be made to adhere to an interpretation because it has not made an observation.

### **3.11.3.3. The author's opinion**

Regardless of whether or not these doctrines can apply in relation to the Commentaries on the OECD Model, the author's view is that points of interpretation arise on particular facts, rather than in the abstract and depend on deciding between two possible meanings both of which are within the ordinary meaning of the term in its context. It is unlikely that any statement in the OECD Commentaries goes as far as fixing an interpretation applying to all possible facts and so, even if acquiescence or estoppel can apply, it is unlikely to resolve the particular interpretation issue being considered.

### **3.11.3.4. The taxpayer's position**

The position of the taxpayer in this process should also be recognized. The taxpayer did not take part in the making of the Commentaries on the OECD Model or the making (or failing to make) an observation and is entitled to have the tax treaty interpreted using the correct approach, whether one of the states is tacitly bound by or estopped from advancing a different interpretation. In a situation where a state makes an observation, the fact of doing so shows that there is not unanimity regarding the correctness of the interpretation shown by the OECD Commentaries, which is something that a court may wish to take into account in deciding what weight to give to the Commentaries as one of the factors that lead to the court's interpretation.

### **3.11.3.5. Final comments**

The author is not aware of any decision of a court in relation to a tax treaty that applies the Commentaries on the OECD Model on the ground of acquiescence or estoppel.

## **3.11.4. The Commentaries on the OECD Model as customary international law**

The widespread use of the Commentaries on the OECD Model might suggest that they had achieved the status of customary international law, which would be binding. For this to be the case, the OECD Commentaries would have to be customarily recognized as binding. The difficulty with such an argument is that: (i) the OECD Commentaries expressly state that they are not binding (see section 3.11.3.); and (ii) there is very little support among courts or academic writing that they are binding. It seems to be clear that at present the OECD Commentaries cannot qualify as customary international law. The author is not aware of any decision of a court in relation to a tax treaty that has decided in favour of this approach. However, this would not prevent the use of the OECD Commentaries on this basis by analogy on the ground that they are undoubtedly material in the minds of the parties when negotiating the treaty (see section 3.11.2.).

## **3.11.5. The Commentaries on the OECD Model as supplementary means of interpretation within article 32 of the Vienna Convention (1969)**

If all the arguments above for using the Commentaries on the OECD Model as part of the interpretation process under [article 31 of the Vienna Convention \(1969\)](#) fail, there is the issue of whether or not the Commentaries qualify as supplementary means of interpretation and, accordingly, they can be used for the limited purposes set out in article 32 (see section 3.4.5.). The OECD Commentaries are not *travaux préparatoires* as normally understood because they do not relate to the preparatory work of any

particular treaty. On the other hand, [article 32 of the Vienna Convention \(1969\)](#) deliberately does not define preparatory work expressly so as not to exclude relevant material (see section 3.5.). Therefore, there seems no basis to exclude the OECD Commentaries from the limited effect permitted under article 32 of the [Vienna Convention \(1969\)](#). As a matter of principle, this seems to give the OECD Commentaries too little weight. It seems unlikely that states would intend the OECD Commentaries to have this limited purpose, given their extent and the work that goes into the continuous process of updating.

Even if the Commentaries on the OECD Model could be used only as supplementary means of interpretation the point might still not be significant. The court might decide, by using article 31 of the Vienna Convention (1969), that either of two possible meanings, say that parts of a day did or did not count, was equally possible, in which case the OECD Commentaries, as supplementary means, could be used to resolve the ambiguity. If the OECD Commentaries could not be used under article 31 of the Vienna Convention (1969) that would matter only if the court had decided contrary to the meaning in the Commentaries, but within the scope of the ordinary meaning of the term in its context because the Commentaries, as supplementary means, could not be used to contradict that decision, unless the decision were absurd or unreasonable, which is unlikely. As a practical matter, a court faced with a problem of interpretation is more likely to find an ambiguity that the OECD Commentaries resolve than to say that the ordinary meaning is clear and the meaning in the Commentaries is wrong.

Courts in some countries have regarded the OECD Commentaries as falling within article 32 of the Vienna Convention (1969): in Australia ([HC](#));<sup>[145]</sup> France ([CE](#));<sup>[146]</sup> Japan ([SC](#));<sup>[147]</sup> Spain ([TS](#));<sup>[148]</sup> and, in some cases in the Netherlands ([HR](#)),<sup>[149]</sup> as an alternative to the Commentaries being context.

### 3.12. Later Commentaries on the OECD Model

#### 3.12.1. What the Commentaries on the OECD Model say

This section considers the status of Commentaries on the OECD Model issued after that the tax treaty concerned was concluded and so the contents cannot have been in the contemplation of the parties when the tax treaty was concluded. On this, the OECD Commentaries themselves state as follows:

33. When drafting the 1977 Model Convention, the Committee on Fiscal Affairs examined the problems of conflicts of interpretation that might arise as a result of changes in the Articles and Commentaries of the 1963 Draft Convention. At that time, the Committee considered that existing conventions should, as far as possible, be interpreted in the spirit of the revised Commentaries, even though the provisions of these conventions did not yet include the more precise wording of the 1977 Model Convention. It was also indicated that Member countries wishing to clarify their positions in this respect could do so by means of an exchange of letters between competent authorities in accordance with the mutual agreement procedure and that, even in the absence of such an exchange of letters, these authorities could use mutual agreement procedures to confirm this interpretation in particular cases.

<sup>145.</sup> *Thiel* (1990), *supra* n. 134, McHugh J at 16 and Dawson J at 10 (who also would have used the Commentaries on the OECD Model under article 31 of the Vienna Convention (1969)).

<sup>146.</sup> FR: CE, 27 July 2001, Case No. 215124, *SA Golay Buchel France*, Tax Treaty Case Law IBFD; and *Interhome* (2003), *supra* n. 40.

<sup>147.</sup> JP: SC, 29 Oct. 2009, *Glaxo Kabush ki Kaisha*, Minshu Vol. 63, No. 8, 1881, Tax Treaty Case Law IBFD.

<sup>148.</sup> ES: TS, 20 Oct. 2011, Rec. No. 1903/2009.

<sup>149.</sup> See Case 10/05268 (2012), *supra* n. 138; and Case 30.245 (1996), *supra* n. 106.

34. The Committee believes that the changes to the Articles of the Model Convention and the Commentaries that have been made since 1977 should be similarly interpreted.
35. Needless to say, amendments to the Articles of the Model Convention and changes to the Commentaries that are a direct result of these amendments are not relevant to the interpretation or application of previously concluded conventions where the provisions of those conventions are different in substance from the amended Articles. However, other changes or additions to the Commentaries are normally applicable to the interpretation and application of conventions concluded before their adoption, because they reflect the consensus of the OECD Member countries as to the proper interpretation of existing provisions and their application to specific situations.
36. Whilst the Committee considers that changes to the Commentaries should be relevant in interpreting and applying conventions concluded before the adoption of these changes, it disagrees with any form of a contrario interpretation that would necessarily infer from a change to an Article of the Model Convention or to the Commentaries that the previous wording resulted in consequences different from those of the modified wording. Many amendments are intended to simply clarify, not change, the meaning of the Articles or the Commentaries, and such a contrario interpretations would clearly be wrong in those cases.
- 36.1 Tax authorities in Member countries follow the general principles enunciated in the preceding four paragraphs. Accordingly, the Committee on Fiscal Affairs considers that taxpayers may also find it useful to consult later versions of the Commentaries in interpreting earlier treaties.<sup>[150]</sup>

This encourages the use of later Commentaries on the OECD Model by tax authorities and suggests that taxpayers might find it useful to do the same. Such an approach is beneficial to taxpayers, as they can expect the tax authorities to apply later OECD Commentaries (and may be able to force the tax authorities to do so on the basis of legitimate expectation), but are free to argue against them in court. In one case, the decision of the Danish *Østre Landsret* (Eastern Division of the High Court, ØL) was based on the tax authorities not applying later OECD Commentaries dealing with the meaning of the term “employer” in article 15 to the detriment of the taxpayer.<sup>[151]</sup>

### 3.12.2. The opinions of the courts

As far as courts are concerned, later Commentaries on the OECD Model are clearly not part of the tax treaty for the purposes of the [Vienna Convention \(1969\)](#). The only way in which the OECD Commentaries could be context is in relation to “any subsequent agreement between the parties regarding the interpretation of the treaty” in [article 31\(3\)\(a\) of the Vienna Convention \(1969\)](#), which, like agreements in article 31(2)(a), does not fit the OECD Commentaries well. However, just as it is suggested in section [3.11.2.2](#) that the existing OECD Commentaries should be treated as context by analogy, the same approach is suggested to be taken to subsequent Commentaries. This would mean no more than that the OECD Commentaries could be considered to be primary interpretative material and not that any particular weight should be given to them. In principle, there seem to be cases where an interpreter of a tax treaty would have to use them as primary material (see section [3.12.4](#) and the software example considered there). Alternatively, while the OECD Commentaries cannot strictly be

<sup>150</sup>. OECD Model (2017): Introduction.

<sup>151</sup>. DK: ØL, 3 Feb. 2000, [Casino Copenhagen K/S v. Ministry of Taxes](#), 3 ITLR 447, Tax Treaty Case Law IBFD.

*travaux préparatoires* either, as they are subsequent to the tax treaty, there is nothing to prevent them from being another type of supplementary means of interpretation.

### 3.12.3. Context and observations regarding later Commentaries on the OECD Model

The real issue is less as to whether or not later Commentaries on the OECD Model are context, but, rather, that they should be recognized as being later and consideration given to what weight, if any, should be given to them. If a state does not agree with later OECD Commentaries, it has the option of making an observation, in which case it will be known that later Commentaries cannot be treated as being a subsequent agreement by that state, even by analogy. Not all later OECD Commentaries are equivalent. For instance, such OECD Commentaries may fill a gap in existing Commentaries, amplify existing Commentaries, record what states have been doing in practice or contradict existing Commentaries. The answer will be different according to their type.

### 3.12.4. Use of later Commentaries on the OECD Model: Examples

An example of the first of these is the discussion of software in relation to the royalties article. Software was not an issue at the time of the [OECD Model \(1977\)](#) and, subsequently, the question arose how it should be treated in relation to the existing definition of royalties. There was no intention to change the meaning of the definition; it was a matter of how something new fitted into it. If the new Commentaries on the OECD Model represent a consensus on how this should be done, there is no reason, in principle, to ignore them and do the same exercise without the assistance of the later material. The Finnish *Korkein hallinto-oikeus* (Supreme Administrative Court, KHO)<sup>[152]</sup> dealt with receipts for the use of software that had been licensed for use by the licensee in its own business without the licensee having the right to make copies and license others under old tax treaties that made no reference to software. If the receipt was a royalty, it had to be for the use of, or the right to use, copyright. The only right to copy the software was for making back-ups which the later OECD Commentaries ignored as being an integral part of the use of the program. The KHO, relying on the later OECD Commentaries, held that the income was business income and not a copyright royalty, and no credit was given for withholding taxes imposed in the source states. The interpretation follows the treaty wording and merely confirms that copying occurring as an integral part of using the software is not considered to be using copyright. It is suggested that this is an entirely appropriate use of later OECD Commentaries. There would be no point in saying that a court was bound to come to an initial decision in relation to software without using the later OECD Commentaries and only then turn to them for confirmation of their decision or the resolution of ambiguities or unreasonable results.

An example of the opposite extreme where later Commentaries on the OECD Model contradict the earlier ones is that in the [Commentary on Article 17 of the OECD Model \(1977\)](#), which said that

[t]he purpose of paragraph 2 is to counteract certain tax avoidance devices in cases where remuneration for the performance of an entertainer or athlete is not paid to the entertainer or athlete himself but to another person, e.g. a so-called artiste-company ...<sup>[153]</sup>

<sup>152.</sup> FI: KHO, 12 Dec. 2011, [Re Company X \(Software Payments\)](#), (2012) 14 ITLR 990, Tax Treaty Case Law IBFD.

<sup>153.</sup> Para. 4 [OECD Model: Commentary on Article 17](#) (1977).

The Commentary on Article 17 of the OECD Model (1992) onwards includes that, as a reference to a situation in which it was applicable, the income of a team, troupe, orchestra, etc., which is constituted as a legal entity, is being paid to the entity.<sup>[154]</sup> The latter is far wider than the original statement, which dealt with tax avoidance. It would, therefore, not be appropriate to give any weight to the later addition in interpreting an earlier tax treaty, as the Swedish HF has now decided in relation to the Ireland-Sweden Income Tax Treaty (1986),<sup>[155]</sup> when the former wording applied.<sup>[156]</sup>

### 3.12.5. Amplification of existing Commentaries on the OECD Model

Examples of amplification of the existing Commentaries on the OECD Model can be found in relation to the meaning of a PE, such as those in the [Commentary on Article 5 of the OECD Model \(2003\)](#) as to whether premises are at a person's disposal and the tests to be applied in determining whether an agent is independent.<sup>[157]</sup>

### 3.12.6. Commentaries on the OECD Model and state practice

An example of the Commentaries on the OECD Model recording what states have been doing in practice is that the [Commentary on Article 5 of the OECD Model \(2003\)](#) records that, normally, states have not regarded an activity carried on in a country through a fixed place of business one that was maintained for less than 6 months.<sup>[158]</sup> This was applied to the [Ivory Coast-Norway Income Tax Treaty \(1978\)](#) by the Norwegian *Høyesterett* (Supreme Court) in *PGS Geophysical* <sup>[159]</sup> to decide that seismic exploration on the continental shelf off the Ivory Coast for 25 days by one vessel and 41 days by another vessel did not constitute a PE in the Ivory Coast, with the result that the Norwegian resident taxpayer could not claim exemption for the profits attributed to it.

### 3.12.7. A relevant tax case

Courts in many countries have referred to later Commentaries on the OECD Model, often without noting that they are subsequent and so the court may not have addressed the issue. Where courts have addressed the issue, subsequent OECD Commentaries have been described as “somewhat suspect” (Canada, [FCA](#)),<sup>[160]</sup> but were used by the Swiss *Bundesgericht/Tribunal fédéral* (Federal Supreme Court, [BDG/TF](#)) in circumstances where there had been no substantial change.<sup>[161]</sup> An example of a valid use of subsequent OECD Commentaries is the US [TC](#) case of *Taisei Fire & Marine Insurance* (1995),<sup>[162]</sup> where the [OECD Draft \(1963\)](#) stated that

[a]gents who may be deemed to be permanent establishment must be strictly limited to those who are dependent, both from the legal and economic points of view, upon the enterprise.

<sup>154.</sup> [OECD Model Tax Convention on Income and on Capital: Commentary on Article 17](#), para. 8 (1 Sept. 1992), Models IBFD.

<sup>155.</sup> [Ire.-Swed. Income Tax Treaty \(1986\)](#), Treaties IBFD.

<sup>156.</sup> SE: HF, 20 June 2016, Case No. 3960-14.

<sup>157.</sup> [OECD Model Tax Convention on Income and on Capital: Commentary on Article 5](#) (2003), paras. 4.1-4.6 and 38-38.8 (28 Jan. 2003), Models IBFD (now expanded as paras. 10-20 and 104-110 of the [OECD Model: Commentary on Article 5](#) (2017)).

<sup>158.</sup> *Id.*, at para. 6.

<sup>159.</sup> *PGS Geophysical* (2004), *supra* n. 120.

<sup>160.</sup> CA: FCA, 19 Oct. 1998, *Cudd Pressure Control Inc. v. Her Majesty the Queen*, A-369-95, Tax Treaty Case Law IBFD.

<sup>161.</sup> CH: BDG/TF, 28 Nov. 2005, *2A.239/2005*, = RDAF II (2006), 239 = StR 2006, 217, cons. 3.4.5, Tax Treaty Case Law IBFD.

<sup>162.</sup> US: TC, 2 May 1995, *Taisei Fire and Marine Insurance Co., Ltd., et al. v. Commissioner of Internal Revenue*, 14296-92, 14297-92, 14298-92 and 14299-92, Tax Treaty Case Law IBFD.

The League of Nations Draft (1928) on which this was stated to be based said of independent agents “absolute independence, both from the legal and economic point of view”, which if translated to a statement about dependent agents should logically have been “legal *or* economic”. The [OECD Model \(1977\)](#) had corrected this, which the TC used in relation to a pre-1977 tax treaty to confirm their view that the “and” should have been “or”. The US [CFC](#) (the lower court), in *National Westminster Bank* (2003),<sup>[163]</sup> declined to refer to the OECD Discussion Draft relating to the redrafting of article 7, as

[g]iven the above-noted statements in the 2001 Discussion Draft [that is, it was acknowledged that the new Draft may not reflect the original intent or historical practice and interpretation of article 7], the 2001 Discussion Draft is of no assistance to the court in interpreting the proper scope of the 1975 Treaty. It simply offers no insights into the “genuine shared expectations of the contracting parties” ...<sup>[164]</sup>

The Spanish [TS](#) has explicitly stated that interpretation of tax treaties “should preferably be dynamic” and has applied later Commentaries on the OECD Model on this basis.<sup>[165]</sup> German courts (*Bundesfinanzhof* (Federal Tax Court, [BFH](#))) do not refer to later OECD Commentaries, as these cannot reflect the intention of the parties at the time of signing the tax treaty.<sup>[166]</sup> Italian courts generally make reference to the last available version of the OECD Commentaries, without giving reasons for why such Commentaries, and not that available at the date of the conclusion of the relevant tax treaty, should be taken as a relevant source of interpretation. French and South African courts have not referred to later OECD Commentaries.

### 3.12.8. Treaty content specifically on the status of the Commentaries on the OECD Model

Material in tax treaties specifically dealing with the status of the Commentaries on the OECD Model is unusual, but the following, from the Protocol (2000) to the Austria-Germany Income and Capital Tax Treaty (2000),<sup>[167]</sup> which was concluded at the same time as the tax treaty, is an exception:

#### 16. Interpretation of the Convention

It is understood that provisions of the Convention which are drafted according to the corresponding provisions of the OECD Model Convention on Income and on Capital shall generally be expected to have the same meaning as expressed in the OECD Commentary thereon. The understanding in the preceding sentence will not apply with respect to the following:

- (a) all observations made by both Contracting States to the OECD Commentary;
- (b) all contrary interpretations contained in this protocol;

<sup>163.</sup> US: CFC, 14 Nov. 2003, [National Westminster Bank, PLC v. United States \(Internal Revenue Service\)](#), 58 Fed. Cl. 491 (2003), Tax Treaty Case Law IBFD.

<sup>164.</sup> Id., at 568.

<sup>165.</sup> ES: TS, 18 May 2005, Rec. No. 754/2000.

<sup>166.</sup> DE: BFH, 25 May 2011, I R 95/10, *Deutsches Steuerrecht* 2011, 1553, 1555 with further references.

<sup>167.</sup> The *Austria-Ger. Income and Capital Tax Treaty* (2000), Treaties IBFD.

- (c) all contrary interpretations made by one of the Contracting States in a published statement, transmitted to the competent authority of the other Contracting State before the entry into force of the Convention;
- (d) all contrary interpretations agreed by the competent authorities following the entry into force of the Convention.

The OECD Commentary – as it may be revised from time to time – constitutes a means of interpretation in the sense of the Vienna Convention of 23 May 1969 on the Law of Treaties.

This gives effect to the meanings in the existing Commentaries on the OECD Model as a primary means of interpretation, subject to the qualification expressed, which are all cases where the parties would want other material to take precedence. The last paragraph dealing with later OECD Commentaries puts them into the category of [article 32 of the Vienna Convention \(1969\)](#), based on the assumption that “a means of interpretation” is intended to refer to supplementary means. This corresponds to the result that it is suggested above would be the case without any special provision in the tax treaty.

A similar example can be found in the Protocol (2008) to the Bosnia and Herzegovina-Spain Income and Capital Tax Treaty (2008),<sup>[168]</sup> which was again concluded at the same time as the tax treaty and adds two provisions. The first refers to interpretation of the treaty according to the OECD Commentaries and the second makes it clear that the Commentaries (as they may be revised from time to time) constitute “a means of interpretation in the sense of the Vienna Convention of 23 May 1969 on the Law of Treaties”.

### 3.13. Effect of other materials produced by international organizations

What is said in sections 3.10. to 3.12. regarding the Commentaries on the OECD Models is equally applicable to the OECD Reports that have been adopted by the OECD Council. The normal method of working is that a report is produced and the report contains changes to the OECD Commentaries, which are later incorporated into the next update. There can be an advantage in referring to the report, because it may contain the reasoning behind the changes. Other current materials produced by the UN and the Andean Community (see, for example, Decision no. 578, on avoiding double taxation and preventing tax evasion) may, where applicable, also be relevant.

Other historical material may be relevant as supplementary means of interpretation. In this respect, the archives of the Organisation for European Economic Co-operation (OECC) and the OECD up to 1977 are available.<sup>[169]</sup> These can be useful in explaining why provisions were originally adopted. Earlier League of Nations material is also available<sup>[170]</sup> and can still be relevant.

Archive material on older tax treaties may be available in some countries. In the United Kingdom, for example, access to material on tax treaties is restricted for 75 years, but, in practice, minutes regarding the negotiation of tax treaties are derestricted earlier. Some insights into treaty negotiations can be

<sup>168.</sup> The [Bosn. & Herz.-Spain Income and Capital Tax Treaty](#) Protocol II (2008), Treaties IBFD.

<sup>169.</sup> Available at [www.taxtreatieshistory.org](http://www.taxtreatieshistory.org).

<sup>170.</sup> Available at <http://setis.library.usyd.edu.au/oztexts/parsons.html> (see under Legislative History of US Tax Conventions, vol. 4, pt. 1 (League of Nations) and pt. 2 (OECC)).

obtained by comparing the available material in both treaty parties. This was done very effectively in relation to the Australia-United Kingdom Income Tax Treaty (1946)<sup>[171]</sup> by Taylor (2010).<sup>[172]</sup>

### 3.14. Mutual agreements and subsequent practice

In article 25(3) of the OECD Model, the states delegate to the competent authorities power to resolve difficulties or doubts arising as to the interpretation or application of the tax treaty. Such an agreement may not bind the states, because: (i) the agreement does not resolve difficulties or doubts, but, rather, changes the tax treaty and, therefore, goes beyond the delegation; or (ii) constitutionally such an agreement would require the same Parliamentary approval as the tax treaty itself before it can take effect in domestic law.

An example of (i) is a decision of the *Hof van Beroep/Cour d'Appel* (Court of Appeals, [HB/CA](#))<sup>[173]</sup> of Gent involving the [Belgium-Netherlands Income and Capital Tax Treaty \(1970\)](#). The mutual agreement determined that the income of an active partner of a Belgian *Société privée à responsabilité limitée* ([SPRL](#))/*Besloten vennootschap met beperkte aansprakelijkheid* ([BVBA](#)) (limited liability company) was categorized as directors' fees under the tax treaty. Originally, under Belgian law such income was classed as business profits, but the law was changed in 1976 to create a separate category of remuneration of active partners in companies of persons. The effect was that the income fell under the other income article of tax treaties. The mutual agreement with the Netherlands, treating the income as directors' fees, was entered into in order to preserve Belgium's right to tax in circumstances in which the Netherlands exempted it in the hands of a Netherlands resident. On that basis, the effect of the mutual agreement was to impose tax on the taxpayer. The [HB/CA](#) found that it was clear from the tax treaty that a Netherlands resident receiving such income was taxable under the other income article and, therefore, exempt from tax in Belgium. While the competent authorities had power to resolve difficulties or doubts as to the interpretation of the tax treaty, here there were no doubts or difficulties and the other income article clearly applied. The mutual agreement was, therefore, not valid under the terms of the treaty.

Another example is a recent decision of the Dutch [HR](#), which held that, as that court had previously decided on the meaning of a provision in the Germany-Netherlands Income and Capital Tax Treaty (1959) relating to termination payments of an employment, there were no difficulties or doubts, so a mutual agreement with Germany on the topic, which would have disadvantaged the taxpayer compared to the earlier decision, was invalid, in spite of the fact that the German [BFH](#) had interpreted the treaty differently.<sup>[174]</sup> The contrary view, which appeals to the author, is that the conflict between the highest courts of the treaty partners proved that there were difficulties or doubts to be resolved by a mutual agreement (and if the Netherlands could not increase the tax beyond what it would have been in accordance with the previous decision of the [HR](#), that is invoking its internal law as justification for its failure to perform a treaty, contrary to article 27 of the [Vienna Convention \(1969\)](#) (see section [3.8.1.](#)), rather than a reason for the mutual agreement to be invalid).

For the same reason as for mutual agreements, domestic law may not give effect to subsequent practice in domestic law, as Parliamentary approval is required for it to do so.

## 4. Article 3(2) of the OECD Model

### 4.1. Application

The [Vienna Convention \(1969\)](#) is of general application. The interpretation provisions that apply specifically to tax treaties are the following: (i) terms that are defined in the tax treaty without the qualification “unless the context otherwise requires”, for example, resident of a contracting state, PE, immovable property, and (for the purpose only of each of those articles) dividends, interest and royalties; (ii) terms that are defined in article 3(1) of the OECD Model, subject to the context “otherwise requiring”; and (iii) article 3(2), which provides that undefined terms have their domestic law meaning, unless the context otherwise requires. Article 3(2) of the OECD Model serves exactly the same function as the definitions in article 3(1), which are also subject to the context otherwise applying. This article is different only in that it incorporates by reference to the meaning that the undefined treaty term has under domestic law of the state applying the tax treaty for the purpose of the taxes subject to the treaty. Apart from these, the Vienna Convention (1969) operates in full. The Vienna Convention (1969) can, and should, therefore, also be used to interpret article 3(2) of the OECD Model itself.

### 4.2. The different meaning of context in the Vienna Convention (1969) and article 3 of the OECD Model

A possible source of confusion is that both article 3(2) of the OECD Model and the [Vienna Convention \(1969\)](#) use the expression “context”, but they do so in a different way. The Vienna Convention (1969) uses the term “context” to differentiate primary interpretative material to be used under article 31 from secondary material to be used under article 32. Article 3(2) of the OECD Model has a different purpose, i.e. to decide whether or not the domestic law meaning should not apply for which any relevant interpretative material can be used. As explained in more detail in section 5., article 3(2) of the OECD Model does not refer to domestic law and context as different concepts; where article 3(2) applies, domestic law will always be included as part of the context. If it is decided that the domestic law meaning should not apply, the meaning derived from the Vienna Convention (1969) will apply. This is necessarily the case where there is no domestic law meaning of the term. The context can otherwise require not fully but partly by giving a term a domestic law meaning up to a point where the context requires that it should not be used, for example, because the Commentaries on the OECD Model provide for this (the meaning of employer is an example; see section 4.4.). The difference in meaning of “context” in the Vienna Convention (1969) and article 3 of the OECD Model is dealt with more fully in section 5.

Article 3(2) of the OECD Model will be considered next in section 4.3. Whether the context otherwise requires in relation to the definitions in article 3(1) of the OECD Model or domestic law in article 3(2) will be dealt with in section 5.

### 4.3. The scope of Article 3(2) of the OECD Model

#### 4.3.1. In general

Article 3(2) of the OECD Model is an important additional element to the [Vienna Convention \(1969\)](#) regarding the interpretation of tax treaties. It provides as follows:

As regards the application of the Convention at any time by a Contracting State, any term not defined therein shall, unless the context otherwise requires *or the competent authorities agree to*

*a different meaning pursuant to the provisions of Article 25*, have the meaning that it has at that time under the law of that State for the purposes of the taxes to which the Convention applies, any meaning under the applicable tax laws of that State prevailing over a meaning given to the term under other laws of that State.

As can be seen, undefined terms have their meaning under domestic law for taxes covered by the tax treaty, unless the context otherwise requires. The words in italics were added in the 2017 update. A similar point had previously been made in the Commentary, and paragraph 13.2 of the [Commentary on Article 3 of the OECD Model \(2017\)](#) now says that the Model was amended to remove any doubt (see section 4.3.3.). The same paragraph states the option of changing the phrase “pursuant to the provisions of Article 25” to read “pursuant to the provisions of paragraph 3 of Article 25” so as to limit the effect to mutual agreements made under that article; alternatively, it gives the option of omitting the added words for states which consider that that competent authorities cannot be given power to agree to a meaning that would prevent recourse to domestic law. Previously, the added words had been used in treaties by the United States (see section 4.9.).

The European Court of Justice (ECJ), in its capacity as arbitrator under the Austria-Germany Income and Capital Tax Treaty (2000), has considered article 3(2) in a way that the author regards as unsatisfactory.<sup>[175]</sup> It said of article 3(2), “such a rule of interpretation by a single State at a given point in time is not to be regarded as a rule intended to arbitrate between divergencies of interpretation between the two States Parties” and that “[a] construction to the contrary would, furthermore, deprive of all practical effect the provisions of Article 25(5) of that convention [the arbitration provision], whose mutual agreement procedure and clause conferring jurisdiction on the Court would have scarcely any meaning if the States Parties had intended that convention to be interpreted only by reference to national laws alone ...”.<sup>[176]</sup> As to the first point, the opposite is the case: if the tax treaty exempts particular income from tax, the effect is that domestic law exempts everything that is taxed under domestic law, which is the desired result, in spite of divergencies between the domestic laws of the two states. As to the second point, the opposite is also the case because of the exception for the context otherwise requiring, so whether or not domestic law applies would be the precise issue in the arbitration, which certainly does not deprive the arbitration provision of all practical effect. It should be emphasized that the court’s quoted remarks were obiter, since there was no finding about domestic law in Germany and, it may be added, there is no domestic law meaning of the term in issue in Germany.<sup>[177]</sup> Article 3(2) was therefore irrelevant, and it is submitted that the court’s decision based on the context of the treaty was correct.

Early model treaties did not contain any definitions of types of income, with the exception that “income from movable capital” was defined in the League of Nations Mexico Draft (1943). Article 3(2) was first used in the United Kingdom-United States Income Tax Treaty (1945).<sup>[178]</sup> There are the following two earlier indications of the same approach: (i) the Canada-United States Income Tax Treaty (1942)<sup>[179]</sup> provided that the definitions of “person,” “individual” and “corporation” had the same meaning as “under the revenue laws of the taxing state”; and (ii) a similar but unilateral approach was contained in the

<sup>175</sup>. AT: ECJ, 12 Sept. 2017, [Case C-648/15, Austria v. Germany](#), Tax Treaty Case Law IBFD.

<sup>176</sup>. Id., at paras. 36 and 37.

<sup>177</sup>. DE: BFH, 26 Aug. 2010, [I R 53/09](#), Tax Treaty Case Law IBFD, was a decision on the interpretation of the same treaty based on the context of the treaty, and not a decision in which domestic law was even in issue; it is not relevant to the meaning of the term in question in German domestic law. The author and Prof. Jürgen Lüdicke have expanded on this criticism of the case in their commentary in 20 ITLR 385.

<sup>178</sup>. The [UK-US Income Tax Treaty](#) art. II(3) (1945), Treaties IBFD.

<sup>179</sup>. The [Can.-US Income Tax Treaty](#) Protocol 3(a) (1942), Treaties IBFD.

US Regulations<sup>[180]</sup> made under the Sweden-United States Income and Capital Tax Treaty (1939),<sup>[181]</sup> which provided that

[a]ny word or term used in these Regulations which is not defined in the Convention but is defined in the Internal Revenue Code shall be given the definition defined therein.

The qualification “unless the context otherwise requires” is a familiar one in UK statutes and agreements.

It is at first sight strange that the treaty partners would wish for a treaty term, particularly one categorizing a type of income, to have different meanings in each state, which is the likely consequence of each state applying its domestic law. The reason is that normally domestic law taxes and the tax treaty relieves from taxation. It is more important to giving effect to the purpose of the tax treaty that when it exempts a particular type of income from tax in the source state that state should exempt the whole of what it taxes as that type of income, rather than that both states should exempt exactly the same scope of income. The same approach applies in the fewer cases where it is the residence state that exempts income under the distributive rules of the tax treaty. In the OECD Model, this applies to government service (article 19), students (article 20) and an alternative in the Commentary on Article 18 of the OECD Model relating to pensions.<sup>[182]</sup> The residence state exempts everything that its domestic law would have taxed under those headings. Whether or not the residence state applies article 3(2) of the OECD Model in other circumstances is considered in section 4.7.

An interesting issue before the courts in the United Kingdom is the effect on treaties of tax law deeming one category of income to be another. Where a diver is working in the sea on the UK Continental Shelf as an employee, tax law provides that “the performance of the duties of employment is instead treated for income tax purposes as the carrying on of a trade in the UK”.<sup>[183]</sup> The First-Tier Tribunal (FTT) found that the business profits article applied, because that was what it was deemed to be, with the result that the income was exempt, as there was no PE. However, the Upper Tribunal found that the employment income article applied, because there was an employment as understood in tax law, with the result that the income was taxable (but the withholding provisions did not apply, as it was taxed as trading income).<sup>[184]</sup> The author’s view is that the FTT’s decision is to be preferred, because it keeps the taxing and treaty exempting provisions in line. It is understood that an appeal will be heard in May 2018. The Dutch HR has taken a strict view of deeming provisions, refusing to apply the domestic law on fictitious wages (see section 5.1.1.).

Sections 4.3.2. to 4.9. deal with some points on the interpretation of article 3(2) of the OECD Model. Whether or not the context otherwise requires that domestic law should not be used will be dealt with in section 5.

### 4.3.2. Meaning of “term” and “not otherwise defined”

#### 4.3.2.1. Terms and application

The OECD Model uses the expression “term” throughout the defined expressions in article 3(1) and (2) in English. In French, “*terme*” is used in article 3(1) of the OECD Model for the definition of a single word, such as “*personne*” and “*société*”, while “*expression*” is used for definitions of more than one word, such as “*entreprise d’un État contractant*” and “*autorité compétente*”. Both “*terme ou expression*” is used in article 3(2) of the OECD Model. In both languages, therefore, the same words are used in article 3(2) of the OECD Model as are used to cover all the definitions in article 3(1). This raises the issue of whether the meaning of “term” in English and “*terme ou expression*” in French in article 3(2) of the OECD Model covers only definitions or is wider in including concepts. It is relevant that domestic law may not use the precise expression used in the OECD Model. For instance, UK tax law refers to “land” rather than “immovable property”, does not use “profits of an enterprise”, uses “disposal” rather than “alienation” in relation to capital gains, and “earnings” rather than “salaries, wages and other similar remuneration” in relation to employment income. It would be contrary to the purpose of the OECD Model (and a tax treaty based on it) not to apply the equivalent domestic law in such cases. This suggests that “term” in article 3(2) of the OECD Model should be given a wide meaning, not restricted to identical words, but, rather, to the equivalent domestic law concept. Regardless of the normal meaning of “*terme*” the French CE has applied article 3(2) of the OECD Model to a phrase in *Golay Buchel* (2001).<sup>[185]</sup> The CE interpreted the phrase “income from debt claims of every kind” in the equivalent of article 11(3) of the OECD Model, noting that, under French domestic law, interest on commercial credits was not categorized for tax purposes as interest, but, rather, as being of the same nature as the purchase price of the goods or services to which it related. For treaty purposes this domestic law classification was applied pursuant to article 3(2) of the OECD Model, with the result that the payment fell within article 7 and in the absence of a PE could be taxed in France. The width of the meaning of “term” can be even more extreme where a tax treaty provides that, in cases of different meanings of two language texts, a third language version is to prevail or where the only official version of a tax treaty is in a third language (see section 3.5.2.). As domestic law will not be written in the third (or sole other) language, there will never be an identical word in domestic law and so it is essential to give a meaning to “term” that conveys the equivalent concept.

#### 4.3.2.2. Interpretation in practice

The word “term” has in practice been interpreted widely to include, in the United States, what expenses are “incurred for the purposes of the permanent establishment” in the former version of article 7(3) of the OECD Model<sup>[186]</sup> and what expenses are deductible for tax purposes.<sup>[187]</sup> On the other hand, as the word “exempt” was not defined in domestic law, it was given a general meaning to include release from the economic burden of taxation by the US CA.<sup>[188]</sup>

Although article 3(2) of the OECD Model covers undefined terms, often an undefined term occurs in the course of a definition of a defined term. Article 3(2) of the OECD Model is, of course, applicable to such undefined terms, as the undefined term in question is the one used in the course of the definition

<sup>185.</sup> *Golay Buchel* (2001), *supra* n. 146.

<sup>186.</sup> I.R.S. Rev. Rul. 89-115, Administrative Documentation IBFD.

<sup>187.</sup> I.R.S. Rev. Rul. 80-243, Administrative Documentation IBFD.

<sup>188.</sup> US: CA, 8 July 1957, *American Trust Company v. James G. Smyth, Collector of Internal Revenue and United States*, 247 F.2d 149 (1957), Docket No. 15339, Tax Treaty Case Law IBFD.

not the one in the definition itself. For instance, “the term ‘company’ means any body corporate ...”<sup>[189]</sup> What is a body corporate will be determined pursuant to article 3(2) of the OECD Model under domestic law, probably non-tax domestic law, subject to the context “otherwise requiring”. And what is covered by copyright within the definition of royalty in article 12(2) of the OECD Model will also be determined by domestic non-tax law, again subject to the context “otherwise requiring”.

The wording of article 3(2) of the OECD Model (“any term not defined therein”) suggests that when there is a partial definition, for example, that “the term ‘person’ *includes* an individual, a company and any other body of persons” (emphasis added),<sup>[190]</sup> there is no scope for the use of domestic law in relation to items not covered by the definition on the basis that the term is defined. It is suggested, however, that this is too literal a reading, as it leaves a lacuna as to how the definition applies to items that are not specified. If there had been no definition, it is clear that domestic law would apply (subject to the context “otherwise requiring”) to supply the whole content of the meaning of the term. There is no purposive reason why the result should be different if the term is defined but only inclusively. It is suggested that the result should be that (subject to the context “otherwise requiring”) domestic law still applies, but the words of inclusion apply in addition even though they would not be included in domestic law. Thus, in the example of the inclusive definition of “person”, if domestic law regarded trustees (or trusts) as persons, although not a body of persons, they would be included.

[Article 3\(2\) of the OECD Draft \(1963\)](#) was clearer in this respect in referring to a term not “otherwise” defined, thus recognizing the possibility of a term being partially defined. The Canadian Income Tax Conventions Interpretation Act also makes the same distinction between a term not defined in the tax treaty and a term not fully defined in the tax treaty, which deals with this point specifically.

There is a more extreme situation of article 3(2) of the OECD Model applying where a term is fully defined, which makes it necessary to depart from a literal reading of the words. Where the context requires that a defined term in article 3(1) of the OECD Model should not apply, effectively the term becomes undefined with the result that article 3(2) can apply. An example is given in section [5.1.2.3](#).

#### **4.3.3. The 2017 addition on the relationship with mutual agreement**

The exception “or the competent authorities agree to a different meaning pursuant to the provisions of Article 25” was added in the 2017 update and is explained in paragraph 13.2 of the [Commentary on Article 3 of the OECD Model \(2017\)](#). The same point had previously been made in the Commentary, and paragraph 13.2 now explains that the article was amended to remove any doubt that a mutual agreement on interpretation had priority over domestic law. US treaties have commonly contained such an exception, which is also contained in the [US Model \(2016\)](#). It is suggested that the change is one of substance, going further than removing doubts. Before the addition of the new words, if the application of article 3(2) of the OECD Model was clear there would be no “difficulties or doubts” to which article 25(3) could apply. However, there can be cases in which there are difficulties or doubts (the words used in article 25(3)) about the application of article 3(2), for example where there is more than one domestic tax law meaning (see section [4.4.](#)). Paragraph 13.2 of the Commentary on Article 3 of the OECD Model (2017) goes on to say that some states consider that the new exception should be limited to agreements pursuant to article 25(3), in which case the wording could be changed to “pursuant to the provisions of paragraph 3 of Article 25”. Since this paragraph contains the only reference to interpretation in article 25, it is difficult to see that any other part of the article could be relevant. The same paragraph also

<sup>189.</sup> [Art. 3\(1\)\(b\) OECD Model \(2017\)](#).

<sup>190.</sup> [Id.](#) at art. 3(1)(a).

notes that other states that do not consider that a state should have the power to agree to the meaning of a term in priority to domestic law are free to omit the new exception.

#### **4.4. Tax law containing more than one definition or incorporating a meaning from non-tax domestic law**

##### **4.4.1. Application**

Article 3(2) of the OECD Model applies the meaning of a term in the domestic law for the purpose of the taxes covered by the tax treaty to the interpretation of the same term in the tax treaty. As the relevant meaning is that applying for the “purposes of” the taxes covered by the tax treaty, there is no need for the definition to be found in the law imposing the taxes covered by the tax treaty. In some cases, the meaning used for the purposes of tax law may be found in non-tax law. In the example already given of the definition in article 3(1) of the OECD Model (see sections 4.3.2.1. and 4.3.2.2.) that “the term ‘company’ means any body corporate ...”, what is a body corporate will be determined under domestic law using article 3(2), and it is likely that the corporate law meaning will be used for the purpose of tax law. The meaning found elsewhere must, however, be used for the purpose of the law of a tax covered by the tax treaty. If a term used in the tax treaty is not found in the law of the taxes covered by the tax treaty, it is not possible to use a meaning found in any other (tax or non-tax) law. This restriction to the meaning “for the purposes of the taxes to which the Convention applies” causes a difficulty in the interpretation of treaty provisions that apply to all taxes, such as articles 24, 26 and 27 of the OECD Model. The reference to “taxes to which the Convention applies” mirrors the wording of article 2 of the OECD Model and so applies to the treaty in general. Strictly, therefore, it seems that when applying, say, the non-discrimination article to a tax not covered by the tax treaty, it is necessary to use not the meaning of an undefined term in such a tax, but, rather, the meaning in a tax covered by the tax treaty. It is likely that, in such a case, the context would prevent use of the latter. However, this leaves open what meaning should be applied instead. Possibly, it could be argued that the tax treaty applies in this respect to the other tax and so the meaning in that tax can be used.

In determining the meaning of the term for the purpose of the taxes covered by the tax treaty, the final phrase of article 3(2) of the OECD Model states that any meaning under the applicable tax laws of the state prevails over a meaning given to the term under other laws of the state. In this respect, the Commentary on Article 3(2) of the OECD Model (2017) states that

where a term is defined differently for the purposes of different laws of a Contracting State, the meaning given to that term for purposes of the laws imposing the taxes to which the Convention applies shall prevail over all others, including those given for the purposes of other tax laws.<sup>[191]</sup>

It is difficult to see how this could not be the case, as the meaning has to be that for the purposes of the taxes covered by the tax treaty. However, the point must have been considered doubtful in France which made a reservation having the same effect in the [OECD Model \(1992\)](#) which was deleted when the addition to the text was made in the OECD Model (1995).<sup>[192]</sup> The reservation was later shown to have been justified when, in the 1999 French decision in *Banque Française de l’Orient* (1999),<sup>[193]</sup> which

<sup>191.</sup> Para. 13.1 [OECD Model: Commentary on Article 3](#) (2017).

<sup>192.</sup> [OECD Model Tax Convention on Income and on Capital](#) (1995), Models IBFD.

<sup>193.</sup> FR: CE 13 Oct. 1999, Case No. 190083, [Banque française de l’Orient](#).

dealt with the application of article 10 to money transferred to a parent as a result of a non-arm's length price, the [CE](#) decided that the word "dividends" had to be interpreted according to its meaning in French corporate law, even though the French *Code Général des Impôts* (General Tax Code, [CGI](#)) provided that such an advantage resulting from a non-arm's length transfer price was deemed to be a distribution (the CGI did not refer expressly to "dividends" but to "distributed income").<sup>[194]</sup>

#### 4.4.2. Where a term has more than one meaning

A term may have more than one meaning in a particular tax law of a tax covered by the tax treaty or different meanings in different tax laws that are taxes covered by the tax treaty. In both cases, it would be expected that the relevant meaning is the one applicable to the issue in question in the tax in question. The [Technical Explanation to the US Model \(2006\)](#) adopts this approach: "Finally, there also may be cases where the tax laws of a State contain multiple definitions of the same term. In such a case, the definition used for purposes of the particular provision at issue, if any, should be used".<sup>[195]</sup> The article does not say this expressly, but it is possible to reach the result by considering for each possible meaning whether or not the context otherwise requires that it should not be used, which is likely to remove all except the most relevant one. Alternatively, it could be possible to reach the same result through the application of good faith.

An example of two different meanings in two different taxes which are covered by the treaty resulting in different treaty categorization in each is found in a Dutch [HR](#) case in 2003 on the repurchase of shares by a company under the [Belgium-Netherlands Income and Capital Tax Treaty \(1970\)](#).<sup>[196]</sup> This was categorized in the facts of the case both as a capital gain for income taxes and as a dividend for dividend withholding tax. The issue in the case was income tax and the HR applied the categorization applicable to that tax. Another example is that there are various definitions of director for different purposes in UK income tax law, including sections 18 (time of receipt of remuneration), 67 (benefits in kind) and 548 (share options) of the Income Tax (Earnings and Pensions) Act (2003), all including, in addition to a member of a board of directors, a single director, the members of a company who manage the company and also a shadow director (a person in accordance with whose directions or instructions the directors are accustomed to act), and another definition in section 452 (close company) of the Corporation Tax Act (2010),<sup>[197]</sup> which includes a shadow director and a manager owning or able to control (with his associates) 20% of the ordinary share capital. The question arises as to which of these definitions would be relevant in interpreting the equivalent of the directors' fees article in the OECD Model. Because of the context referring to a member of the "board" of directors, it would presumably exclude cases where the company did not have a board, such as the single director in a case where there had to be a single director only as opposed to a case where there happens to be only one member of the board of directors at the time in question, or the members of a company managed by its members. It would probably include a shadow director, as this is included in the definition for remuneration purposes. It is unlikely to include a manager owning or controlling 20% of the ordinary share capital because this is part of the definition of a close company and not relevant to directors' remuneration.

<sup>194.</sup> This is the opposite result from that in FR: CE, 27 May 2002, Case No. 125959, [Sté Superseal Corporation](#), Tax Treaty Case Law IBFD, in which the CE applied the definition of immovable property in French tax law, but the [Can.-Fr. Income and Capital Tax Treaty \(1975\)](#), Treaties IBFD, provided in the immovable property article that "[i]n the case of France, the term 'law of the Contracting State' shall mean French taxation laws".

<sup>195.</sup> [US Model Tax Convention on Income: Technical Explanation on Article 3\(2\)](#) (15 Nov. 2006), Models IBFD.

<sup>196.</sup> NL: HR, 12 Dec. 2003, [Case 38.461](#), V-N 2004/2.9; BNB 2004/123c\*, Tax Treaty Case Law IBFD.

<sup>197.</sup> UK: [Corporation Tax Act\(2010\)](#), National Legislation IBFD.

In the [OECD Draft \(1963\)](#), what is now the reference to “the law (*‘droit’*) of that State concerning the taxes to which the Convention applies” was to then “the laws (*‘législation’*) of that Contracting State relating to the taxes which are the subject of the Convention”. This suggested a narrower interpretation referring only to tax law. But, if tax law incorporates general law concepts, it is obviously necessary that these should be included. Nor was there any reference in the pre-1995 version of article 3(2) of the OECD Model (see section [4.8.](#)) to the meaning in applicable tax laws prevailing over the meaning under other laws, but for most countries this seems to state the obvious.

## 4.5. Tax law including other treaties

### 4.5.1. Reference to the tax law of a state

The issue arises as to whether or not the reference to the tax law of a state includes other tax treaties. For instance, if a person is the loser under the dual residence tie-breaker of one tax treaty, does the person remain resident in that state for the application of another tax treaty? The Commentary on Article 4(1) of the OECD Model states, without giving any reasons, that

[i]t [the second sentence of article 4(1)] also excludes companies and other persons who are not subject to comprehensive liability to tax in a Contracting State because these persons, whilst being residents of that State under that State’s tax law, are considered to be residents of another State pursuant to a treaty between these two States.<sup>[198]</sup>

The argument is presumably that, by virtue of the dual residence provision of the first tax treaty coupled with the distributive rules of the same tax treaty, the person is now “liable to tax in that State in respect only of income from sources in that State”<sup>[199]</sup> and so is not a resident of that state for the purpose of a second tax treaty. It is implicit in this argument that the source of PE income of a resident of another state is the PE itself and not the income of the PE that could include third state income (such as interest received by the PE from a resident of another state). This argument was advanced by the Dutch Ministry of Finance and is also supported by a decision of the Dutch HR.<sup>[200]</sup> However, the tax treaty in question containing the dual residence provision was the [Belgium-Netherlands Income and Capital Tax Treaty \(1970\)](#), which also stated in the Protocol (1970) that “[t]he expression ‘under the law of that State’ used in article 4, paragraph 1, means the law of that State as amended or supplemented by international agreements”.<sup>[201]</sup> The HR relied in part on this. Whether the decision has effect for other tax treaties depends on whether the dual residence article amends or supplements domestic law or whether the Protocol (1970) refers only to other treaties, such as the North Atlantic Treaty (1949) of the North Atlantic Treaty Organization ([NATO](#)), which may change residence for internal law purposes.

### 4.5.2. Winner and loser states

Although the result in the Commentaries on the OECD Model is consistent with the purpose of the tax treaty between the loser state under the dual residence provision and the third (source) state, as the person is not taxable in the loser state on the third state income because it is excluded by the tax treaty containing the dual residence provision, there are difficulties with this argument. The first is that the

198. Para. 8.2 [OECD Model: Commentary on Article 4\(1\)](#) (2017).

199. Art. 4(1), second sentence [OECD Model](#) (2017).

200. NL: HR, 28 Feb. 2001, [Case 35.557](#), Tax Treaty Case Law IBFD.

201. Protocol II [Belg.-Neth. Income and Capital Tax Treaty](#) (1970), Treaties IBFD.

definition of resident is determined according to “the laws of that State”. These clearly do not include the tax treaty by which the person’s dual residence is resolved, otherwise it would be impossible to get to the tie-breaker. So why should that expression include the first tax treaty when looking at another tax treaty? The point can be made that, in the second sentence, there is no reference to the liability to tax being under the laws of that state, but as the second sentence cuts down the effect of the first it would not be difficult to imply them.

#### 4.5.3. Involvement of three states

The same issue can arise with three residence states. For instance,<sup>[202]</sup> suppose the taxpayer is a domestic law resident of States A, B and C, has a permanent home available to him in States A and B, but not State C, and as between States A and B the centre of his vital interests is in State A. The tie-breaker in the State A-State B Tax Treaty resolves the dual residence in favour of State A. Similarly, the tie-breaker in the State A-State C Tax Treaty resolves the dual residence in favour of State A (on account of permanent home in State A). In the State B-State C Tax Treaty, if the State A-State B Tax Treaty is ignored, the tie-breaker resolves the dual residence in favour of State B (on account of permanent home in State B) with the result that State C reduces its source tax, even though the taxpayer is not taxable in State B on State C income because of the effect of the State A-State B Tax Treaty, as it is income taxable only in State A. The result is that State C has to reduce its source tax in respect of the same taxpayer both under the State A-State C and the State B-State C Tax Treaties, which may have different results. If, on the other hand, in applying the State B-State C Tax Treaty, the State A-State B and State A-State C Tax Treaties are taken into account, the taxpayer is not a resident of State B (as he is not liable to tax on State C income, as this is income taxable only in State A under the State A-State B Tax Treaty) or State C (as he is not liable to tax on State B income as this is income taxable only in State A under the State A-State C Tax Treaty) and so the State B-State C Tax Treaty is inapplicable (article 1 is not satisfied on the basis that residence in that article is after applying the tie-breaker and the reference to residence in one or both of the states should be ignored). The problems are avoided, which is in accordance with the purpose of the State B-State C Tax Treaty, as there is no double taxation between those states. However, it is difficult to reach the result on the ordinary meaning of the words of the tax treaty. Whether or not the position in the Commentaries on the OECD Models prevails may depend on the weight that a court gives to the Commentaries.

If, however, the tax treaties among the countries have different tie-breaker rules in article 4(2) of the OECD Model, for example, by omitting one or more of the tests, it may be the case that not all tax treaties will point in the same direction in resolving the dual residence issues with the result that it will not be possible to arrive at a solution by reading each tax treaty in the light of the others.

#### 4.5.4. EU law and Member States

A related argument is whether for Member States, EU law is included as tax law of the Member State. In principle, it is difficult to see why it should not be, as EU law becomes domestic law and the argument based on the context against applying other tax treaties would not apply. If that is right, it is possible that a definition in EU law might be applied to the interpretation of a tax treaty. It has been suggested<sup>[203]</sup> that EU law may be used for the definition of beneficial owner (defined in the [Interest and Royalties Directive](#)

<sup>202.</sup> Based on J. Sasseville, *A Tax Treaty Perspective: Special Issues*, in *Tax Treaties and Domestic Law* sec. 3.3. (G. Maisto ed., IBFD 2006).

<sup>203.</sup> See Avella, *supra* n. 78.

(2003/49)),<sup>[204]</sup> centre of vital interests (via the EU term normal residence) and transfer pricing (via the EU Arbitration Convention (90/436)),<sup>[205]</sup> for example, in relation to the determination of the 3-year period in article 25(1) of the OECD Model. Some care needs to be applied because EU law may, for example, define the type of income differently. In this respect, the ECJ held in *Asscher* (*Case C-107/94*)<sup>[206]</sup> that the relevant income was under the treaty directors' fees and under EU law business income, as the person was the sole shareholder of the company. The difference was relevant to the treaty non-discrimination article. Alternatively, EU law may conflict with the Commentaries on the OECD Model.

#### 4.6. Limit on changes in domestic law

So far, domestic law has been considered as it existed when the tax treaty was entered into so that the parties could be aware of it when they made the tax treaty. Tax law is subject to frequent change and the issue arises of the extent to which such changes should be used under article 3(2) of the OECD Model. The text has since the *OECD Model (1995)* made this clear: “[a]s regards the application of the Convention *at any time* any term not defined therein shall ... have the meaning that it has *at that time* under the law of that State ...” (emphasis added). In principle, the reference to domestic law is ambulatory (see section 4.8. for the position under older tax treaties). However, as with article 3(2) of the OECD Model generally, this is subject to the context not “otherwise requiring”. The Commentary on Article 3(2) of the OECD Model<sup>[207]</sup> attempts to deal with this by saying that part of the context is the intention of the parties when the tax treaty is signed. It goes on to refer to the balance between ensuring the permanency of commitments entered into when signing (as a state should not be allowed to make a tax treaty partially inoperative by amending in its domestic law the scope of undefined terms in the tax treaty) and the need to be able to apply the tax treaty in a convenient and practical way (thus, avoiding the need to refer to outdated concepts). The OECD Commentary on Article 3(1) does not satisfactorily deal with how to resolve this balance. It is suggested that it is a matter of good faith (see section 3.4.3.). If the change to domestic law was made in good faith, for example, to clarify a borderline, the change should apply for treaty purposes. But if the change was made in order for the state to enlarge its taxing jurisdiction, it should not be used for treaty purposes. Obviously, many changes will not fall neatly into these categories, but good faith should be the test.

An example of the application of good faith in this way is a Dutch HR decision<sup>[208]</sup> in which the Netherlands changed domestic law from the position at the time of the tax treaty (containing article 3(2) of the OECD Model as it was before the 1995 version, see section 4.8.1.) that a lump-sum commutation of pension rights was pension income taxable in the residence state (Singapore) to employment income, so that the Netherlands (as source state) could impose tax on the lump sum immediately before it was paid so far as it related to services performed in the Netherlands. The HR found that giving effect to the new law would not give rise to an interpretation in good faith, with the result that the new domestic law did not apply to the tax treaty. Similarly, in a further decision,<sup>[209]</sup> the HR decided that the *Belgium-Netherlands Income and Capital Tax Treaty (1970)* (containing article 3(2) of the OECD Model as it was before the 1995 version) prevented the application of a change in domestic law to tax lump-sum pension rights (as source state) prior to the pensioner's emigration. Without the new domestic law,

204. Council Directive 2003/49/EC of 3 June 2003 on a Common System of Taxation Applicable to Interest and Royalty Payments Made between Associated Companies of Different Member States, OJ L 157 (2003), EU Law IBFD.

205. EU Arbitration Convention 90/436/EEC of 23 July 1990 on the Elimination of Double Taxation in Connection with the Adjustment of Profits of Associated Enterprises, EU Law IBFD.

206. NL: ECJ, 27 June 1996, *Case C-107/94, P.H. Asscher v. Staatssecretaris van Financiën*, ECJ Case Law IBFD.

207. Paras. 12 and 13 *OECD Model: Commentary on Article 3(1)* (2017).

208. NL: HR, 5 Sept. 2003, *Case 37.657*, Tax Treaty Case Law IBFD.

209. NL: HR, 13 May 2005, *Case 39.610*, Tax Treaty Case Law IBFD.

the pension would have been taxed only in the pensioner's new residence state (Belgium). The new domestic law changed the categorization of the pension income to employment income, which was not a change made in good faith. On the other hand, a change in domestic law taxing a capital gain before emigration was not in breach of the good faith principle, as, in accordance with the Commentary on Article 13 of the OECD Model, alienation could include deemed alienation and here the deemed alienation occurred while the taxpayer was resident in the Netherlands.<sup>[210]</sup> This applied to the Belgium-Netherlands Income and Capital (1970), the Netherlands-United Kingdom Income and Capital (1980)<sup>[211]</sup> and the Netherlands-United States Income (1992)<sup>[212]</sup> Tax Treaties, all containing the former version of article 3(2) of the OECD Model. As article 3(2) of the OECD Model contemplates changes in domestic law, either expressly in the current version or impliedly under the former versions (see section 4.8.), many of which will have the effect of changing the category of the income in domestic law and by article 3(2) under a tax treaty, it cannot be that any change in the categorization of income will be one made in bad faith. What matters is the reason for the change. The changes from pension income to employment income in the first case referred to in this paragraph and that in the second regarding tax pension rights before emigration both seem to be examples of changes made in order to impose tax that was not previously due under the tax treaty and were, therefore, made in bad faith. The change considered in the capital gains case was not, because a charge on a deemed alienation was contemplated by the Commentary on Article 3 of the OECD Model.

## 4.7. Qualification conflicts and use of article 3(2) of the OECD Model by the residence state

### 4.7.1. Application

As noted in section 4.3.1., one of the purposes of article 3(2) of the OECD Model is to ensure that where the tax treaty relieves a particular type of income from tax it relieves everything that domestic law taxes. In a few cases (in the OECD Model, government service and students, and an alternative in the Commentary on Article 18 of the OECD Model relating to pensions) where it is the residence state that relieves from tax, the same is true. Leaving aside such cases, where the residence state relieves from tax the issue arises as to how the residence state applies article 3(2) of the OECD Model. Suppose income of a particular type is permitted to be taxed by the source state, but the residence state would not have taxed that item of income under that heading. Is the residence state obliged to give relief for the source state tax? This question is dealt with in more detail in the chapter on Qualification Conflicts. Briefly, the answer is that the residence state must give relief. The source state has correctly applied the tax treaty by using article 3(2) of the OECD Model to determine that it is permitted to tax that particular income under the tax treaty. The application of the tax treaty by the residence state is different. It is required (by the wording of article 23 of the OECD Model, which is not always followed in tax treaties) to apply the tax treaty to give relief in respect of income "which, in accordance with the provisions of this Convention, may be taxed in the other Contracting State". The residence state must ensure that (from the source state's point of view) the income may be taxed in the source state; it is not required to ask whether, if it had been the source state, it would have taxed that income because it is not applying the treaty to a term that is a type of income in the same way as the source state does, but it is merely asking whether the source state tax is "in accordance with the provisions of this Convention". This is

210. NL: HR, 20 Feb. 2009, [Cases 07/12314](#), [42.701](#) and [43.760](#), Tax Treaty Case Law IBFD.

212. The [Neth.-US Income Tax Treaty](#) (1992), Treaties IBFD.

the view in the Commentary on Article 23A(1) of the OECD Model,<sup>[213]</sup> although it should be noted that the Netherlands and (in relation only to changes in domestic law after the tax treaty) Switzerland have made observations disagreeing with it,<sup>[214]</sup> and it was not followed by the German BFH.<sup>[215]</sup> It should be emphasized that this approach applies where domestic law is different in the two states, thus giving rise to the different categorization of the income; the residence state is not required to give relief where the source state has wrongly applied the tax treaty or where the two states take a different view of the facts.

#### 4.7.2. Partnerships

The issue discussed in section 4.7.1. can arise with partnerships. France does not accept the conclusions of the OECD Partnership Report (1999)<sup>[216]</sup> in relation to French partnerships which are considered as French residents, which means that they can benefit from the tax treaty between France and the source country, no matter whom France taxes. The German tax administration has indicated that it will follow the Commentaries on the OECD Model in this respect in relation to partnerships,<sup>[217]</sup> but the German BFH has taken the opposite view.<sup>[218]</sup> In many countries, there are no published statements on whether the country agrees with the OECD Commentaries on this point. These include: Argentina, Australia (but the tax authorities accept the OECD Partnership Report (1999) in relation to source taxation; see ruling TD 2011/25), Brazil, China (People's Rep.), India (which is not an OECD member country, but has observer status), Italy (although rulings relating to collective investment vehicles (CIVs) are consistent with it), Japan, Singapore, South Africa and Spain (although the mutual agreement procedure (MAP) of 15 February 2006 with the United States regarding the treatment in Spain of LLCs and S corporations is consistent with the OECD's approach). In Canada, in *TD Securities (USA) LLC* (2010),<sup>[219]</sup> the Tax Court of Canada (TCC) stated that

[i]t is not disputed that the CRA has a long-standing practice of characterizing the income earned by a foreign partnership made up of foreign partners consistent with the OECD Partnership Report.<sup>[220]</sup>

The preamble to the US Treasury Department Final Regulations (2000) regarding the eligibility of treaty benefits in the case of fiscally transparent entities stated that

[t]he approach adopted in these regulations is consistent with the evolving multilateral consensus among the member countries of the ... [OECD] on the appropriate method for source countries

213. Paras. 32.1 onwards *OECD Model: Commentary on Article 23A(1)* (2017).

215. I R 95/10, (2011), *supra* n. 166.

216. OECD, *The Application of the OECD Model Tax Convention to Partnerships* (OECD 1999), International Organizations' Documentation IBFD [hereinafter *OECD Partnership Report* (1999)].

217. DE: *Anwendung der Doppelbesteuerungsabkommen (DBA) auf Personengesellschaften* [Decree Concerning the Application of Double Tax Conventions to Partnerships], 26 Sept. 2014, BStBl. I, 2014, 1258. The Decree also deals with cross-border guaranteed payments, which have traditionally been characterized as part of PE income when granted to a partner domiciled abroad. Ref. 5.1 of the Decree finds this practice to be in line with the *OECD Partnership Report* (1999), *supra* n. 216. The view taken by the administration is in open contradiction to the current practice of the BFH, which avoids a qualification conflict by attributing guaranteed payments to the particular articles of the tax treaty (interest, royalties etc.), thereby excluding them from PE income.

218. I R 95/10 (2011), *supra* n. 166, in which a Hungarian partnership was treated as opaque in Hungary and as transparent in Germany. From the Hungarian perspective, the *Ger.-Hun. Income and Capital Tax Treaty* art. 7(1) (1977), Treaties IBFD, would generally provide for taxation in Hungary. The BFH did not follow the qualification in Hungary and applied the tax treaty only from the perspective of the partners, some of them resident in Germany. In relation to articles 3(2) and 23, the BFH saw no reason to follow the qualification of the source state, i.e. Hungary.

219. CA: TCC, 8 Apr. 2010, *TD Securities (USA) LLC v. Her Majesty the Queen*, 2010 Carswell Nat 788, 2010 TCC 186, 2010 D.T.C. 1137 (Eng.), [2010] 5 C.T.C. 2426, Tax Treaty Case Law IBFD.

220. *Id.*, at 80.

to follow to determine if they should provide treaty benefits on items of income paid to fiscally transparent entities, particularly when an entity classification conflict exists between the source and residence states. This evolving multilateral consensus is described in greater detail in the OECD report, “Application of the OECD Model Tax Convention to Partnerships” ...<sup>[221]</sup>

This approach does not deal with those cases where it is the residence state that exempts income from tax and the source state takes a different view of the scope of the income to which the exemption applies and also exempts it (there is no problem if the source state taxes it, as there is tax in the source state only, which is the correct result where the residence state exempts). The conflict results in double exemption, unusually even in a tax credit state, that the OECD Model does not resolve.

## 4.8. Static or ambulatory reference to domestic law under treaties based on the earlier OECD Model (1995) and earlier

### 4.8.1. The issue

The statement that article 3(2) of the OECD Model refers to the law at the time of application of the tax treaty was added to the [OECD Model \(1995\)](#). Before that, it read as follows:

As regards the application of the Convention by a Contracting State any term not defined shall, unless the context otherwise requires, have the meaning which it has under the laws of that Contracting State relating to the taxes which are the subject of the Convention.

This version is also found in the current OECD Model on Estates, Inheritances and Gifts (1982).<sup>[222]</sup> The earlier [OECD Draft \(1963\)](#) and OECD Draft on Estates and Inheritances (1966)<sup>[223]</sup> have slight differences in wording but are materially similar. The Canadian SC, in *Melford* (1982),<sup>[224]</sup> decided that the reference to domestic law in an article similar to the former version was static, although the arguments seem to have been mixed up with issues of override. Canadian domestic law was immediately changed (see section 3 of the Income Tax Convention Interpretation Act), on the basis that its treaty partners had been consulted and all considered the treaty provision was ambulatory. The OECD then changed article 3(2) of the OECD Model to confirm this view, the then Commentary on Article 3(2) of the OECD Model stating that the amendment confirmed the general and consistent understanding of the OECD member countries.

### 4.8.2. Court opinions regarding static or ambulatory reference

There are many examples of courts applying the ambulatory approach to the former wording of article 3(2) of the OECD Model, thus confirming the OECD’s view of the understanding of the OECD member countries. The three Dutch HR cases referred to in section 4.6. proceeded on the basis that the new domestic law potentially applied for treaty purposes in tax treaties containing the former version of article 3(2) of the OECD Model and went on to consider whether or not the change in domestic law was made in good faith. Another example concerned an HR decision of 2003<sup>[225]</sup> on the taxation of

221. US Treas. Reg. TD 8889 (30 June 2000).

222. [OECD Model Tax Convention on Estates, Inheritances and Gifts](#) (3 June 1982), Models IBFD.

223. [OECD Draft Tax Convention on Estates and Inheritances](#) (28 June 1966), Models IBFD.

224. CA: SC, 28 Sept. 1982, *Melford v. Her Majesty the Queen*, 2 SCR 504, Tax Treaty Case Law IBFD.

225. NL: HR, 5 Sept. 2003, [Case 37.651](#), Tax Treaty Case Law IBFD.

“deemed salary” derived by a director/substantial shareholder under the [Netherlands-Belgium Income and Capital Tax Treaty \(1970\)](#). In this case, the director/substantial shareholder was a resident of Belgium and was a director of a Dutch *Besloten vennootschap (BV)*, which was a resident of the Netherlands. Generally, a person is a substantial shareholder if he owns 5% or more of the shares in a company; the pertinent shareholder owned 100% of the shares in the BV. The BV and the director agreed that he would not receive any remuneration for his activities. From 1 January 1997, the Dutch *Wet op de loonbelasting* (Wage Tax Law, [LB](#)) 1964<sup>[226]</sup> stated in article 12a that the salary of such a director/substantial shareholder must be equal to at least 70% of the salary which is customary for similar employment. The tax authorities used this provision to adjust the 1997 salary from no remuneration to NLG 150,000 (approximately EUR 68,180). The HR held that article 12a of the LB 1964 could lead to a result that the taxpayer was taxed on income that he did not receive. However, the HR held that this in itself was insufficient to conclude that the Netherlands was expanding its taxation rights beyond the scope of the tax treaty. The HR observed that, when certain items of income according to their character, as determined by the source from which they spring, are allocated to the Netherlands for taxation, article 3(2) of the tax treaty leaves the Netherlands scope to tax these items of income in accordance with its domestic legislation, including provisions on notional income. This is, however, different in cases where the provisions on notional income lead to a change in the division of taxation rights between the contracting states. Article 3(2) of the tax treaty does not permit this, as it would be equivalent to a unilateral amendment of the tax treaty. In this case, article 12a of the LB 1964 resulted in the taxation of income that was not actually derived by the taxpayer and which, in the future, could be derived either in the form of dividends or capital gains. As the tax treaty contains different attribution rights for employment income, dividends and capital gains, the HR decided that the tax treaty prevented the application of article 12a of the LB 1964.

Further recent examples can be given. In the [FC](#) of Australia, in *Virgin Holdings* (2008),<sup>[227]</sup> Edmonds J stated,

[J]est I be misunderstood, I want to make it quite clear that insofar as Art 3(2) of the Model Convention and its analogue in the Swiss Agreement mandates recourse to domestic law meanings, assuming they exist, cf., *Thiel* 171 CLR at 343 in [29] above, I am firmly of the view that the better and preferred approach should be ambulatory and not static. That was the conclusion reached by the OECD Committee on Fiscal Affairs (1992 OECD Model, Official Commentary on Art 3, para 11), which led to the 1995 amendment to Art 3(2) of the Model Convention to adopt, specifically, the ambulatory approach.<sup>[228]</sup>

The same approach was followed in another case before the FC, *Undershaft* (2009).<sup>[229]</sup> The effect of these cases was that reference to the “Australian income tax” in the Australia-Switzerland Income Tax Treaty (1980)<sup>[230]</sup> in the former case or the “Commonwealth income tax” in the Australia-United Kingdom Income Tax Treaty (1967)<sup>[231]</sup> in the latter case, both tax treaties being concluded before Australia taxed capital gains under its income tax, was held to include tax on capital gains. As Vann

228. Id., at 43.

229. AU: FC, 3 Feb. 2009, *Undershaft (No 1) Ltd v. Commissioner of Taxation*, [2009] FCA 41, Tax Treaty Case Law IBFD.

230. The *Austrl.-Switz. Income Tax Treaty* (1980), Treaties IBFD.

231. The *Austrl.-UK Income Tax Treaty* (1967), Treaties IBFD.

(2009)<sup>[232]</sup> has pointed out in his case comment on both cases, if reference had been made to the *travaux préparatoires* (which would have been context for the purpose of deciding whether or not domestic law meaning of the Australian income tax from time to time should not be applied) available in the archives in both Australia and the United Kingdom (which was the relevant tax treaty in *Undershaft*), the opposite conclusion would have been reached. In the second example, before the Spanish *Audiencia Nacional* (National Court, [AN](#)) decision in *International Business Machines* (2010),<sup>[233]</sup> the tax treaty in question<sup>[234]</sup> provided for a 5% withholding tax on royalties for the use of copyrights of literary, dramatic, musical or artistic work, 8% for copyrights on scientific work and 10% on other royalties. The courts had previously classified software royalties as falling within the literary category (5%), rather than the scientific one (8%). In 2003, Spanish copyright law listed software in a separate category from literary, artistic or scientific works. From that time onwards, domestic law showed that software royalties were no longer regarded as being within the literary category. The AN applied an ambulatory approach in holding that the residual 10% treaty category applied. There are also examples of states legislating on the assumption that a change will affect tax treaties by providing for transitional relief, as occurred in the United Kingdom on the introduction of corporation tax in 1965 in relation to dividends, interest and royalties.<sup>[235]</sup> The US Treasury regards it as ambulatory (see, for example, the Department Technical Explanation<sup>[236]</sup> to the Ireland-United States Income Tax Treaty (1997):

Like the U.S. Model, the Convention clarifies that the reference in paragraph 2 to the internal law of a Contracting State means the law in effect at the time the treaty is being applied, not the law as in effect at the time the treaty was signed ... <sup>[237]</sup>

In France, the domestic tax treatment is addressed before the application of the tax treaty, which means that it is the domestic law at the time of the case.<sup>[238]</sup>

Exceptions are known: after the change to the wording of article 3(2) of the OECD Model, the Austrian *Verwaltungsgerichtshof* (Supreme Administrative Court, [Vwgh](#)) started to interpret the reference to domestic law in all existing tax treaties as a static one.<sup>[239]</sup> It is suggested that the fact of the change in wording is not sufficient to support an assumption that the meaning has changed when there was a good reason to clarify the position after the Canadian case of *Melford* (1982).<sup>[240]</sup> In South Africa, there is one court case, *Baldwins (South Africa)* (1961),<sup>[241]</sup> in which the Appellate Division ([AD](#)) declined to apply later domestic law in the other state.

### 4.8.3. Conclusion regarding earlier versions of article 3(2) of the OECD Model

Accordingly, it is suggested that the older version of article 3(2) of the OECD Model, which is still found in tax treaties, also requires that the reference to domestic law should be interpreted in an ambulatory way.

### 4.9. Variations to article 3(2) of the OECD Model in US tax treaties

US tax treaties since 1982 add a further qualification to “unless the context otherwise requires”, namely “or the competent authorities agree to a common meaning pursuant to the provisions of Article 25 (Mutual Agreement Procedure)” (see section 3.4.6.). It is clear that the effect of such an agreement would prevent domestic law from being used under article 3(2) of the OECD Model. This variation has now been adopted by the OECD and is dealt with in section 4.3.3.

## 5. Specific Treaty Interpretation Issues

### 5.1. The meaning of “context” in article 3 of the OECD Model and the Vienna Convention (1969)

#### 5.1.1. In general

The qualification “unless the context otherwise requires” is used in the OECD Model both for the defined expressions in article 3(1) and in article 3(2). It is a familiar expression in some common law countries, where definitions are used in statutes or legal documents. It conveys that there may be circumstances in which the definition is not appropriate. “Requires” is a reasonably strong word that conveys that there must be a good reason to displace the defined meaning<sup>[242]</sup> or the domestic law meaning.<sup>[243]</sup> This means that a higher threshold than the balance of probabilities will prevail to displace the defined meaning or the domestic law meaning (see section 4.3.3. for the power of the competent authorities to agree to a different interpretation).

The term “context” in article 3(1) and (2) of the OECD Model cannot have the same meaning as in the [Vienna Convention \(1969\)](#) (see section 3.4.6.), where it is defined for the purpose of separating primary material to be used for interpretation from secondary material, a distinction that has no relevance to the question whether or not the domestic law meaning of a term should be used. If secondary material within [article 32 of the Vienna Convention \(1969\)](#), the use of which is permitted by the Convention for limited purposes of interpretation (see section 3.5.), showed an intention that the domestic law meaning of a term should not be used, it would make no sense to argue that the secondary material (which is not context for the Convention) was not context for article 3(2) of the OECD Model and should, therefore, be ignored with the result that the domestic law meaning was applied. The relationship between the two meanings of context has been explored by Van der Bruggen (2003).<sup>[244]</sup> As the title implies, Van der Bruggen (2003) would equate the meaning of “context” in article 3(2) of the OECD Model with any permitted interpretative material in the Vienna Convention (1969), which is wider than the defined term “context” in the Vienna Convention (1969), and he is, therefore, saying that the context for article 3(2) of the OECD Model includes any permitted interpretative material.

<sup>242.</sup> Art. 3(1) OECD Model (2017). As was said in an English case, a defined meaning in a contract could be displaced only if “necessary, rather than merely sensible or reasonable”. See UK: EWCA, 21 Dec. 2009, *Hammonds v Jones*, [2009] EWCA Civ 1400, at 32.

<sup>243.</sup> *Id.*, at art. 3(2).

<sup>244.</sup> E. van der Bruggen, *Unless the Vienna Convention Otherwise Requires: Notes on the Relationship between Article 3(2) of the OECD Model Tax Convention and Articles 31 and 32 of the Vienna Convention on the Law of Treaties*, 43 Eur. Taxn. 5 (2003), Journals IBFD.

The Commentary on Article 3 of the OECD Model shows that the meaning may be even wider by including as context “the meaning given to the term in the legislation of the other Contracting State (an implicit reference to reciprocity on which the Convention is based)”.<sup>[245]</sup> This provides a route (in addition to the words added to article 3(2) of the OECD Model (2017); see section 4.3.3.) to an interpretation that gives a common meaning to a term, as illustrated by a case in the Dutch *Hoge Raad* <sup>[246]</sup> concerning the fictitious wage attributed to an individual who owns 5% or more of the capital of a company and performs personal activities for the company. If the actual wage is less than the amount of the normal wage determined in accordance with the legislation, the taxpayer is deemed to have received the difference as a fictitious wage; and if there is no actual employment, there is deemed to be one. The case concerned a taxpayer, resident in Portugal, with a 5% shareholding in a Dutch company to which he provided services in the Netherlands in circumstances such that the fictitious wage applied. The facts were that if domestic law applied to interpret the undefined term “wages” in the employment article of the tax treaty (or “directors’ fees” in that article), the Netherlands was entitled to tax the fictitious wage. In considering whether the context required that domestic law should not be used to interpret those terms, the court referred to the OECD Commentary on Article 3, under which the meaning of the term “wages” (or “directors’ fees”) in Portugal was included in the context. That meaning did not include any equivalent to fictitious wages. The court therefore considered that, in interpreting the tax treaty, “wages” (or “directors’ fees”) did not include the Dutch fictitious wage, so the Netherlands, as source state, could not tax the fictitious wage. Since Portugal did not tax it either, this resulted in reciprocity, as neither state taxed the fictitious wage.

However, reciprocity is achieved only if the source state has a wider definition of a type of income than the tax treaty permits it to tax than the residence state. If it has a narrower one, there is no point in referring to the other state’s wider definition, because the tax treaty cannot increase the tax in the source state (except in certain states; see section 2.2.4.). It also follows that the wider definition in the residence state is unaffected by the tax treaty, either because the only treaty issue in that state is the amount of relief for the source state’s tax or because of the saving clause in [article 1\(3\) of the OECD Model \(2017\)](#), added by the [MLI](#) (see the GTTC Chapter on Article 1 (forthcoming)), which would prevent an argument that the tax treaty could be interpreted in the same way as in the Dutch case. If, therefore, the states in the Dutch case had been reversed, with the Netherlands being the residence state and Portugal being the source state, the result would have been different and reciprocity would not have been achieved, because both states would continue to tax under their domestic law. Indeed, reciprocity would not be achieved even if the Netherlands, as residence state, were to have a wider definition of a type of income, so long as the Netherlands was entitled to tax that income under the tax treaty and this did not result in a shift in the taxation rights of the parties under the treaty.<sup>[247]</sup>

The Dutch case was also unusual in that fictitious wages were not included within the scope of another item of income. Normally, if a state has a wider definition of a type of income than the other state, the other state is likely to tax the difference in width as a different type of income, such as when interest is treated by the source state as a dividend, while the residence state treats it as interest.<sup>[248]</sup> Allowing

<sup>245</sup>. Para. 12 [OECD Model: Commentary on Article 3](#) (2017).

<sup>246</sup>. BNB 2017/34 (18 Nov. 2016), *supra* n. 50.

<sup>247</sup>. For an example, see NL: HR, 23 May 2014, [Case 13/02237](#), BNB 2014/170, Tax Treaty Case Law IBFD. The case concerned the notional yield from savings and investments, because the tax treaties in question assigned the right to tax dividends (or in the absence of actual dividends, capital gains) to the Netherlands.

<sup>248</sup>. This may not be a good example, because the definition of dividend in the OECD Model includes income from other corporate rights which is subjected to the same taxation treatment as income from shares in the source state, and the definition of interest does not refer to domestic law, but the same principle applies where both types of income are undefined.

domestic law to apply enables the tax treaty to have effect, since the residence state will, in accordance with the OECD Commentary on conflicts of qualification,<sup>[249]</sup> respect the source state's taxation and give relief accordingly. If, on the other hand, the source state restricts the width of the definition of a type of income to correspond to the width in the other state, as in the Dutch case, it is likely that the residence state will tax the difference in scope as income of a different type. Reciprocity would still not be achieved.

It should be noted that saying that the domestic law in the other state is context does not mean that the context will require domestic law not to apply; it is merely one of the factors to be considered.

Looking at the other state's law is not restricted to article 3(2) of the OECD Model, which applies only where the state has a domestic law definition. An example is the Canadian case of *Gladden* (1985),<sup>[250]</sup> where, at the time of the [Canada-United States Income Tax Treaty \(1942\)](#), only the United States taxed capital gains and used an expression from its domestic law: sale or exchange. The issue arose, when Canada later taxed capital gains, as to whether or not this expression included a deemed disposition on death that was taxable in Canada, the [FC](#) holding that it did so on the basis that the surrounding circumstances at the time the tax treaty was signed accounted for the use of a US domestic law expression. Applying [article 32 of the Vienna Convention \(1969\)](#) on the basis that it would be absurd to exempt gains from actual disposals and not those from deemed disposals, indicated that there was a general intention to exempt residents of the other state, in this case, the United States, from tax on capital gains. (Article 3(2) of the OECD Model was not directly in point because the tax treaty did not contain it.) A more recent example, where article 3(2) of the OECD Model is in point, is that the [Canada-United States Income and Capital Tax Treaty \(1980\)](#) has a limitation-of-benefits provision, which originally only applied to the United States, containing expressions taken from US domestic law (such as "regularly traded"). When the provision later became applicable from a Canadian perspective by virtue of the Protocol (2007),<sup>[251]</sup> Canada announced that it would adopt the US meaning of those terms until it had its own definitions.

The following four cases exist: (i) where there is a domestic law meaning of an undefined term in both states, and paragraph 12 of the Commentary on Article 3 of the OECD Model says that the domestic law in the other state provides a context for the first state's domestic law not to be used; (ii) where there is domestic law in the first state but none in the other state, which falls outside the scope of paragraph 12 of the Commentary on Article 3 of the OECD Model but may still provide context that indicates that the domestic law meaning should not be used in the first state (see section [5.1.2.4](#) for examples); (iii) where there is no domestic law meaning in the first state but there is in the other state, as in the example in the *Gladden* case, which falls outside the scope of article 3(2) of the OECD Model, but the other state's law may be relevant under the Vienna Convention (1969); and (iv) where there is no domestic law in either state, which would be a good situation for having an agreement on interpretation under the power given by the words added to the article in the 2017 update (see section [4.3.3](#)).

Accordingly, there seems no need to limit the meaning of "context" in respect of article 3(2) of the OECD Model. Any relevant material that throws light on whether or not domestic law should not be used should, therefore, be considered.

## 5.1.2. Whether the context otherwise requires: The interaction between different meanings of context in article 3 of the OECD Model and the Vienna Convention (1969)

### 5.1.2.1. The issue

Article 3(2) of the OECD Model fits into the scheme of interpretation in the [Vienna Convention \(1969\)](#) in a similar way to the treaty definitions in article 3(1) of the OECD Model that are also subject to the context “otherwise requiring”. The difference is that, instead of the definition being set out as in article 3(1) of the OECD Model, the definition incorporates external material by reference – the meaning under domestic law of the state applying the tax treaty. What is suggested to be the correct approach to applying article 3(2) of the OECD Model may be approached in stages by starting with defined expressions that are not subject to the context “otherwise requiring”, such as the definitions of resident of a contracting state, PE, immovable property, and (for the purpose only of each of those articles) dividends, interest and royalties.<sup>[252]</sup> It is interesting to note in passing that many of these definitions rely in part on domestic law: the definition of immovable property is pure domestic law with some overriding changes, that of dividends incorporates income from other corporate rights subject to the same domestic tax law as income from shares, and that of royalties incorporates domestic copyright, patent, trademark law, etc. The context for the Vienna Convention (1969) has been explained as meaning the primary interpretative materials to be used in interpreting the treaty under article 31 (see section 3.4.5.). When interpreting such an expression when it is used in the tax treaty, the context is effectively only the treaty definition; there is little or no room for other items of context or other elements, such as good faith and object and purpose, to be considered. Whenever, say, the tax treaty refers to a PE, there is very little room to argue that the definition in article 5 does not apply. An exception could be made for PEs in a third state, as at least part of the definition<sup>[253]</sup> is limited to a PE in the treaty partner state only. Presumably the definition could be applied in a particular context to include one in a third state by making the necessary consequential changes, which would not involve a change in the basic meaning of the term. Another exception is that article 1 of the OECD Model refers to persons who are residents of one or both of the contracting states, while the definition in article 4 resolves dual residence in favour of one state, and so the reference to both states seems either to be referring to article 4(1) only (or possibly to the situation during the time the dual residence is being resolved, or cannot be resolved, which is now more of an issue with the [MLI](#) change to the dual residence provision for companies; see section 5.3.1.), or it is superfluous. Although the definition of resident of a contracting state is not subject to the context “otherwise requiring”, there may be limited circumstances in which the context could affect the definition.

It is the same for agreed interpretations outside the tax treaty itself. The Commentary on the Vienna Convention (1969) explains that

it is well settled that when an agreement as to the interpretation of a provision is established as having been reached before or at the time of the conclusion of the treaty, it is to be regarded as forming part of the treaty ... <sup>[254]</sup>

And it says the same of subsequent agreements:

252. See J.F. Avery Jones et al., [Whether the Definition of Dividend Limited to the Dividend Article Applies to the Double Taxation Relief Article Granting Underlying Credit](#), 53 Bull. Intl. Fiscal Docn. 3 (1999), Journals IBFD.

253. Art. 5(5) and (7) OECD Model (2017).

254. Para. 14 *Vienna Convention: Commentary* (1969).

Similarly, an agreement as to the interpretation of a provision reached after the conclusion of the treaty represents an authentic interpretation by the parties which must be read into the treaty for the purposes of its interpretation.<sup>[255]</sup>

### **5.1.2.2. Whether the context otherwise requires in relation to the definitions in article 3(1) and (2) of the OECD Model**

#### **5.1.2.2.1. The matter in question**

Just as the context within the meaning of the [Vienna Convention \(1969\)](#) of a defined expression that is not subject to the context “otherwise requiring” includes the definition, both the definitions in article 3(1) of the OECD Model and domestic law (which is a definition incorporated by reference into the tax treaty) are part of the text of the tax treaty and are, therefore, within the context for the Vienna Convention (1969). As context for the purposes of article 3 of the OECD Model is wider than the context of the Vienna Convention (1969), they are also part of the context for article 3. Thus, when considering whether for the purposes of article 3 of the OECD Model the context otherwise requires, it is necessary to include the definition in article 3(1) itself and domestic law in relation to article 3(2). The issue is not one of considering: (i) the definition<sup>[256]</sup> or domestic law;<sup>[257]</sup> and (ii) a meaning to be derived from the context for article 3 of the OECD Model as alternatives, but, rather, one of using the definition or domestic law to consider whether the context for article 3 (including the definition or domestic law) requires them not to be used. At this stage, the analysis is a purely negative issue as to whether or not the definitions do not apply, which must be answered using the context for article 3 of the OECD Model alone (although applying good faith), and not other interpretative elements, such as object and purpose. If they do not apply, what does apply in their place is considered in sections [5.1.2.2.2.](#) to [5.1.2.2.6.](#)

#### **5.1.2.2.2. The definition of article 3(1) of the OECD Model the only context required**

In many cases, the definition of article 3(1) of the OECD Model itself will be the only context regarding article 3 necessary to decide that the definition should not be applied. An example is given in section [5.1.2.3.](#), where applying the definition had the result of a whole sentence in the tax treaty having no effect in either state.

#### **5.1.2.2.3. Domestic law the only context of article 3 of the OECD Model required**

Similarly, in many cases domestic law itself will be the only context for article 3 of the Model necessary to decide that domestic law should not be applied under article 3(2). Two examples are given in section [5.1.2.4.](#): one where Australian domestic law used “carried on” in distinction to “carried out”, a distinction obviously inappropriate to the use of “carried on” in the OECD Model and a UK example, where a domestic law definition was made for the purpose of a particular section of domestic tax law that had no relevance to the purposes of the tax treaty. In both cases, the domestic law definition itself was sufficient context for article 3 of the OECD Model to decide that it should not be used to interpret a particular undefined term used in the tax treaty. Taking the example of interpreting “beneficial owner” in a tax treaty between the United Kingdom, which uses the term in domestic law, and another country, which does not, the context for article 3 of the OECD Model includes both the UK domestic law meaning and that of the Commentaries on the OECD Model. The process of considering whether or not the context

<sup>255.</sup> Id.

<sup>256.</sup> Art. 3(1) [OECD Model](#) (2017).

<sup>257.</sup> Id., at art. 3(2).

for article 3 of the OECD Model “otherwise requires” would include considering the consequences if UK domestic law applied (which might be that there was no beneficial owner in some circumstances) compared to the consequences of a different meaning derived from the OECD Commentaries applying, and the arguments for a universal meaning of that term in all tax treaties, which would readily lead to the conclusion that the context of article required that the UK domestic law meaning should not be applied.

Where there are several different domestic law meanings to be considered (see section 4.4.), it may be necessary to consider for each of them whether or not the context for article 3 “otherwise requires”, until either only one meaning is left, or that context has eliminated all of them. There is now more scope for other items of context and other elements, such as good faith and object and purpose, to be considered in order to establish the relevant domestic law meaning.

#### 5.1.2.2.4. A first practical application regarding article 3 of the OECD Model

The approach to the definitions of article 3(1) and the undefined terms in article 3(2) of the OECD Model can be combined in order to interpret undefined terms used in the course of a defined term (for example, to interpret “body corporate” within the definition of “company” by reference to the domestic law meaning) or to use domestic law when the definition is an inclusive one and domestic law applies it to a case other than the words of inclusion. In this respect, the example is given in section 4.3.2. of using domestic law to apply the inclusive definition of “person” to include trustees (or trusts).

Article 3(1) and (2) of the OECD Model can also apply in turn if it is decided that the context requires that the definition of article 3(1) should not be used, as the term then effectively becomes undefined and so article 3(2) operates. An example is given in section 5.1.2.3., where the context requires the definition not to be applied and domestic law was applied. It would be possible to have a situation in which the context required that domestic law did not apply either, leaving a meaning to be established by the [Vienna Convention \(1969\)](#).

If it is decided that the context for article 3 of the OECD Model “otherwise requires”, the next step is to establish a different meaning under article 31 using the material within the (narrower) context of the Vienna Convention (1969), but now necessarily excluding the definition<sup>[258]</sup> or domestic law,<sup>[259]</sup> plus the other interpretative elements, such as ordinary meaning and object and purpose. If an attempt is to combine the process of determining whether or not the context of article 3 of the OECD Model “otherwise requires” with finding an alternative meaning, there is a danger that the definition (or domestic law) is excluded from the context of article 3 for the former and that the context of article 3 is used for the latter, instead of the context of the Vienna Convention (1969) to establish a meaning under article 31. [Article 32 of the Vienna Convention \(1969\)](#) can then be applied, if there is any relevant material, for the limited purposes permitted, such as confirming the meaning already ascertained or determining a meaning when the process under article 31 gives rise to ambiguities or unreasonable results.

The approach to the application of article 3(2) of the OECD Model to the effect that first domestic law is considered and then whether or not the context requires that it should not be used has been applied in a number of countries, including Australia, Spain, the United Kingdom and the United States. In this context, the US [SC](#) has stated,

<sup>258</sup>. Id., at art. 3(1).

<sup>259</sup>. Id., at art. 3(2).

[t]he word “person” is not defined in the treaty and we are referred by Article II(3) [the equivalent of article 3(2) of the OECD Model] of the Convention, therefore, to the domestic tax law of the country applying the treaty, in this case the United States, to determine its meaning.<sup>[260]</sup>

The US [TC](#), in relation to “full and adequate consideration” as applied to an annuity in the Israel-United States Income Tax Treaty (1975),<sup>[261]</sup> has stated,

[t]he term “adequate and full consideration” appears extensively in the Internal Revenue Code, generally followed by the phrase “in money or money’s worth”, in a multitude of contexts.<sup>[262]</sup>

#### 5.1.2.2.5. Alternative approach to the context “otherwise requiring” for article 3(2) of the OECD Model

An alternative approach to whether or not the context “otherwise requires” has been adopted by the German [BFH](#) and the Swiss and Swedish courts. For instance, in a German case,<sup>[263]</sup> a German resident employed by a German company who worked in Spain for a Spanish company for less than 183 days, continued to be paid by the German company which recharged the cost to the Spanish company. The issue was whether or not the Spanish company was his employer for the purposes of article 15(2) (b) of the OECD Model. While the Spanish company would probably not have been his employer in German domestic law, the BFH applied an economic meaning of employer and concluded that it was his employer on the basis of the context of the Germany-Spain Income and Capital Tax Treaty (1966).<sup>[264]</sup> The BFH considered that, in the context of the tax treaty, Spain should have the right to tax, as the salary was deductible there. In doing so, the BFH applied the following sequence for interpreting treaties:

- (1) applying the definition given by the treaty itself;
- (2) in the absence of a treaty definition by considering the context of the treaty clause concerned; and
- (3) if the context does not indicate the meaning of the word, by referring to domestic law.<sup>[265]</sup>

The Swiss *Tribunal Fédéral* (Federal Supreme Court, [TF](#)) has applied a similar approach.<sup>[266]</sup>

A similar approach has been advanced by the Swedish [RÅ](#):

Domestic tax rules shall be applied only unless the context otherwise requires. The meaning of this restriction according to the [National Tax] Board’s opinion may be summed up as follows: Where a term of the treaty, as used in any treaty provision, does not give a clear indication of its meaning it

<sup>260.</sup> US: SC, 29 Apr. 1963, [Andre Maximov v. United States](#) (1963) 373 U.S. 49, 63-1 USTC (CCH) ¶ 9438, 11 AFTR 2d (RIA) ¶ 63-602, Tax Treaty Case Law IBFD.

<sup>261.</sup> The [Isr.-US Income Tax Treaty](#) (1975), Treaties IBFD.

<sup>262.</sup> US: TC, 29 June 2004, [Isamat M. Abeid v. Commissioner of Internal Revenue](#), 122 T.C. 404 (2004), Tax Treaty Case Law IBFD.

<sup>263.</sup> DE: BFH, 21 Aug. 1985, [IR 63/80](#), Tax Treaty Case Law IBFD.

<sup>264.</sup> The [Ger.-Spain Income and Capital Tax Treaty](#) (1966), Treaties IBFD.

<sup>265.</sup> See also DE: BFH, 30 May 1990, [I R 179/86](#), Tax Treaty Case Law IBFD, regarding the [Austria-Ger. Income and Capital Tax Treaty](#) (1954), Treaties IBFD, and DE: BFH, 25 Feb. 2004, [I R 42/02](#), Tax Treaty Case Law IBFD, regarding the [Ger.-Ire. Income and Capital Tax Treaty](#) (1962), Treaties IBFD. However, there are also German cases in which the BFH followed a different order, citing article 3(2) of the applicable tax treaty, then stating the meaning of the term in question under domestic law and only finally adding that no different meaning of the term follows from the wording and the context of the tax treaty (for example, in DE: BFH, 13 Feb. 2008, [I R 63/06](#), Tax Treaty Case Law IBFD, regarding the [Ger.-Switz. Income and Capital Tax Treaty](#) (1971), Treaties IBFD).

<sup>266.</sup> 2A.239/2005 (2005), *supra* n. 161.

is necessary to try to establish the intentions of the contracting parties. In so doing guidance should be sought from the terminology of the treaty as a whole, its structure and systematic approach, the function of the article in question, its introduction and historical context as well as other relevant circumstances. Only if such an investigation does not lead to any result should recourse be made to the meaning of the term under domestic law of the state applying the treaty.<sup>[267]</sup>

This has also been proposed by Lang (2000).<sup>[268]</sup>

#### 5.1.2.2.6. The author's opinion

The author respectfully disagrees with the approach of looking for a contextual meaning before domestic law, though not necessarily with the result of the German case.<sup>[269]</sup> It is not clear whether this is more of a disagreement with the way that the order is expressed or a fundamental disagreement. The reasons for disagreement, which will be apparent from the description of the interpretation process noted in section 5.1.2.2.4., are, first, that it seems to conflate the following two processes requiring the use of different materials: (i) deciding whether or not the context “otherwise requires” by using the wider context for article 3 of the OECD Model, including domestic law; and (ii) determining the meaning on the basis that it does “otherwise require” by using the narrower context for the [Vienna Convention \(1969\)](#) (but now excluding domestic law), and all other relevant interpretative elements, such as ordinary meaning of language and object and purpose. The approach treats domestic law and the context for article 3 of the OECD Model as if they were mutually exclusive concepts when, in fact, domestic law is always necessarily part of the context for article 3 when interpreting an undefined term, just as the definitions of article 3(1) are part of the context for the Vienna Convention (1969) (and, hence, the context for article 3) when interpreting the defined term. It is not clear which context is referred to in the second step in the German reasoning set out in section 5.1.2.2.5. Examples are given in section 5.1.2.4. where the domestic law itself was the only context necessary to conclude that the context required that it should not be used. Second, the ordinary meaning of the words “shall, unless the context otherwise requires have the meaning that it has ... under the law of that State ...” do not permit concluding that domestic law does not apply without considering the effect of its applying, particularly so when there are more than one domestic law meanings, for each of which it must be considered whether or not the context otherwise requires. Third, if it were to be concluded that the context “otherwise requires” that domestic law should not be used, a meaning will necessarily have to be obtained from the context for the Vienna Convention (1969) and, therefore, saying “if the context [presumably for article 3] does not indicate the meaning of the word” as part of deciding whether or not the context “otherwise requires” seems to be a non sequitur, leading to the inevitable result that domestic law can never be used, as the Vienna Convention (1969) assumes that it is always possible to find a contextual meaning. This approach is equivalent to saying the opposite of article 3(2) of the OECD Model to the effect that the meaning derived from the context for the Vienna Convention (1969) applies, unless it requires one to use domestic law.

The author suggests that the approach in the case (see section 5.1.2.2.5.), where the person was working in Spain, should have been to consider the effect of the domestic law meaning of employer in the context of the tax treaty in exactly the same way as if employer was a defined expression in article 3(1) of the OECD Model that incorporated domestic law. The same result could have been reached on

<sup>267</sup>. Case 1169-1987, *supra* n. 101 (translation from Sundgren, *supra* n. 103, at p. 287).

<sup>268</sup>. M. Lang, *The Application of the OECD Model Tax Convention to Partnerships* (Linde & Kluwer 2000).

<sup>269</sup>. IR 63/80 (1985), *supra* n. 263.

the basis that applying domestic law would mean that Germany could tax, which might be considered to be contrary to the context of article 3 of the OECD Model, as the tax deduction was in Spain.

### 5.1.2.3. Examples of the context requiring definitions of article 3(1) of the OECD Model not to be used

It is more likely that the context will require domestic law to be displaced than a defined expression, but there are examples of the latter applying. The [OECD Draft \(1963\)](#) defined “national” in the non-discrimination article (not subject to the context “otherwise requiring”), but the phrase “notwithstanding the remedies provided by the national laws of those States” was contained in the [MAP](#) article. It would be clear from the context that the definition of “national” did not apply to national laws, and this would have been equally true if the definition of national had been in article 3(1) (as it is in the [OECD Model \(1992\)](#) onwards) and, therefore, subject to the context “otherwise requiring”. Or if a tax treaty defined “national” in article 3(1) and also contained a definition of recognized stock exchange as meaning a national securities exchange, it would be clear from the context that the definition of “national” did not apply there. These would be clear examples of the context “otherwise requiring”.

An extreme example, considered by the UK [HC](#), arose under the United Kingdom-United States Income Tax Treaty (1945). Article XV (redrafted by the Protocol (1966)),<sup>[270]</sup> which was presumably the cause of failing to apply the defined expressions properly), provided that

[d]ividends and interest paid by a corporation of one Contracting Party shall be exempt from tax by the other Contracting Party except where the recipient is a citizen, resident, or corporation of that other Contracting Party. This exemption shall not apply if the corporation paying such dividend or interest is a resident of the other Contracting State.<sup>[271]</sup>

One of the definitions in the tax treaty, which was subject to the context not “otherwise requiring”, was “the term ‘resident of the United Kingdom’ means any person (*other than ... a United States corporation*) who is resident in the United Kingdom for the purposes of United Kingdom tax ...” (emphasis added). If the payer of the dividends or interest was a US corporation (defined as one created or organized in or under the laws of the United States), the effect of applying the definition of resident of the United Kingdom in the second sentence of article XV of the tax treaty was that the sentence became meaningless because a US corporation could never be a resident of the United Kingdom, as US corporations were specifically excluded by the definition from being a resident of the United Kingdom. In the reverse situation of a UK corporation (one created under the laws of the United Kingdom) paying dividends or interest, there was no possibility of a UK corporation being within the treaty definition of resident in the United States, as this was limited to US corporations. Thus, the second sentence of article XV of the tax treaty had no effect in either state if the treaty definitions were incorporated. The context, therefore, required that the definition should not be applied in the sentence quoted, even though it did apply in the previous sentence, as had been decided in an earlier case,<sup>[272]</sup> which the HC considered was correct. The obvious alternative, for which the (then) Inland Revenue were contending, was the domestic law meaning, which is an application of the equivalent of article 3(2) of the OECD Model; having decided that the context required the definition in the equivalent of article 3(1) not to be used. Presumably when drafting the Protocol (1966) to make the first sentence reciprocal (previously,

<sup>270</sup>. The [Protocol to the UK-US Income Tax Treaty \(1945\)](#) (1966), Treaties IBFD.

<sup>271</sup>. UK: HC, 1 Mar. 1982, [Commissioners of Inland Revenue v. Exxon Corporation](#), [1982] STC 356, Tax Treaty Case Law IBFD.

<sup>272</sup>. UK: HC, 23 June 1972, [Lord Strathallmond v. Commissioners of Inland Revenue](#), 48 TC 537, Tax Treaty Case Law IBFD.

it applied only to dividends paid by a UK corporation) and adding the second sentence, the parties overlooked the definitions and intended the domestic law meaning of resident to apply. This is an interesting example of the application of the equivalent of article 3(1) and (2) of the OECD Model in turn.

#### **5.1.2.4. Examples of the context requiring the domestic law meaning not to be used**

##### **5.1.2.4.1. The matter in question**

In article 3(2) of the OECD Model, there is greater scope for the context “otherwise requiring” than for defined expressions in article 3(1) or its equivalent in the particular tax treaty. As far as types of income are concerned, if the tax treaty relieves from tax in the source state, it would normally be expected that the domestic law meaning of undefined expressions determining the type of income would apply, so that the relieving provision exactly mirrored the taxing provision in domestic law. Thus, “pensions” in article 18 of the OECD Model, which are relieved from tax in the source state, would be expected to be given the domestic law meaning in each state, regardless of whether or not the meanings are the same. Any other interpretation would either not relieve the whole of what one state taxed as pensions or would relieve more than the state taxed as pensions which means that the excess, which the state taxed as something else, was exempted. Neither result would be consistent with the object and purpose of the tax treaty.

##### **5.1.2.4.2. Use of other terms**

###### **5.1.2.4.2.1. Opening remarks**

Where terms other than types of income are concerned, there is more scope for the context “otherwise requiring”, as, in many cases, the purpose of the tax treaty would be better served by their having a common meaning.

Sometimes it is possible to find a treaty term used in the tax law of a tax covered by the tax treaty, but in a different sense. UK tax law does not use either “enterprise” or “business” as a taxing criterion, but there was until 2008, for example, a rule applicable to expenditure of small or medium-sized enterprises containing a definition of “business” for the purpose of the particular section to mean an individual, and a partnership of which all the members are individuals, etc.<sup>[273]</sup> Clearly, such a definition, while applicable to income tax which is a tax covered by the tax treaty, would not be used to interpret references to “business” in the OECD Model (or a tax treaty based on it), as the definition was intended for the purpose of the particular section only.

The scope for the context “otherwise requiring” is greater in connection with changes in domestic law after a tax treaty has been concluded. This is considered in section 4.6.

This issue is particularly likely to arise where only one of the states has a domestic law meaning of a term. This might result in that state applying domestic law and the other state a general meaning, which would not be symmetrical. The following possible examples set out in sections 5.1.2.4.2.2. to 5.1.2.4.2.6. can be given.

###### **5.1.2.4.2.2. Beneficial owner**

The term “beneficial owner” is used extensively in UK and Australian domestic legislation and case law has given it a meaning that is not necessarily appropriate to tax treaties, for example, there are cases where there is no beneficial owner. This is a term the purpose of which indicates that a common

---

<sup>273</sup>. UK: Capital Allowances Act 2001, sec. 48.

interpretation should be given that would not be achieved by using domestic law in one of the states and a general meaning in the other; a common meaning should be used in both states.

#### 5.1.2.4.2.3. Habitual abode

The use of the term “habitual abode” in the tie-breaker for individuals in article 4(2) of the OECD Model is translated in German tax treaties as “*gewöhnlicher Aufenthalt*”, a term that is used in domestic law to mean 6 months’ residence. If the OECD Model had intended to indicate a 6-month test, it could have said so, but, instead, used a more general expression for which there is nothing in the Commentary on Article 4 of the OECD Model to suggest that a 6-month rule was intended to be used in one of the states. The context would, it is suggested, require that the domestic law meaning should not be used.

#### 5.1.2.4.2.4. Days

In relation to counting days of presence in a state for the purposes of article 15 of the OECD Model, domestic law may provide that for residence purposes a day counts only if the person is present at midnight. Such a rule is inconsistent with the Commentaries on the OECD Model, which set out a detailed rule for counting days. In the case of *Kinsella* (2007)<sup>[274]</sup> before the Irish HC, the Ireland-Italy Income Tax Treaty (1971)<sup>[275]</sup> contained a provision in the residence article for counting days: that a person was resident in Italy if, amongst other things, he was present in Ireland for a period or periods not exceeding 91 days in the fiscal year. Irish domestic law (introduced after the conclusion of the tax treaty) counted days for the purposes of domestic law residence only if the person was present at midnight. The HC applied this rule to the tax treaty, finding that the taxpayer was not resident in Ireland for 91 days, and was, accordingly, a resident of Italy; if parts of a day had been counted, the taxpayer would have been resident in Ireland for more than 91 days. It is respectfully suggested that it is in conflict with the object and purpose of the tax treaty to the effect that a person could be in Ireland from one minute after midnight at the beginning of a particular day and leave one minute before midnight at the end of the same day without the day counting as a day of residence for the purpose of counting days in the residence article. The HC did not consider whether or not the same interpretation should not be given to the similar wording in article 15 of the OECD Model.

In 2003, the Dutch HR decided two cases<sup>[276]</sup> on the interpretation of the term “presence” for the application of the 183-day rule under the Brazil-Netherlands (1990)<sup>[277]</sup> and Netherlands-Nigeria (1991)<sup>[278]</sup> Income Tax Treaties. The *Brazil-Netherlands Income Tax Treaty* (1990) was concluded in the Netherlands, Portuguese and English languages, all three texts being equally authentic, and, in case of any divergence of interpretation, the English text prevails. The *Netherlands-Nigeria Income Tax Treaty* (1991) was in the English language only. The HR first referred to the English definition of article 15(2) (a) of the tax treaties, which read: “the recipient is present in the other State for a period or periods not exceeding in the aggregate 183 days in the fiscal year concerned”. The HR observed that this definition is also not entirely clear. Therefore, the HR decided that, under *article 31(1) of the Vienna Convention* (1969), an interpretation of a treaty term should be in accordance with the ordinary meaning of that term in its context. The HR held that the context of article 15(2)(a) of the tax treaties pointed unmistakably at physical presence. Neither the other parts of the tax treaties nor the accompanying notes contained any indication that the treaty partners supported an interpretation deviating from the text of article 15(2)

<sup>274.</sup> *Kinsella* (2007), *supra* n. 127.

<sup>275.</sup> The *Ire.-It. Income Tax Treaty* (1971), Treaties IBFD.

(a) of the tax treaties. This view is supported by the Commentary on Article 15 of the OECD Model,<sup>[279]</sup> which explicitly states that the term refers to physical presence.

#### 5.1.2.4.2.5. Enterprise

One problem is that the term “enterprise” is not generally used in common law countries in tax law, and the Commentary on Article 4 of the OECD Model says that

[t]he question whether an activity is performed within an enterprise or is deemed to constitute in itself an enterprise has always been interpreted according to the provisions of the domestic laws of the Contracting States.<sup>[280]</sup>

In the [HC](#) of Australia, in *Thiel* (1990), Mason CJ, Brennan and Gaudron JJ said of the term “enterprise”,

[a]rticle 3(2) provides no assistance in ascertaining the meaning of the words “enterprise” or “profits” because these words have no particular or established meaning under the laws relating to Australian income tax which is relevant to the outcome of the question for decision. That question must be resolved by reference to the Agreement itself and any extrinsic materials which may properly be considered.<sup>[281]</sup>

And in relation to “carried on”, they said,

[h]owever, the meaning of “carried on” in Australian income tax law has been influenced by the fact that the Income Tax Assessment Act 1936 (Cth) uses in juxtaposition both expressions “carrying on” and “carrying out” and that a distinction has been drawn between them, the former meaning “the habitual pursuit of a course of conduct” and the latter meaning “the carrying into execution of a plan or venture which does not involve repetition or system”: see, for example, *Premier Automatic Ticket Issuers Ltd. v. Federal Commissioner of Taxation* [1933] HCA 51; (1933) 50 CLR 268 at pp 297-298. Decisions as to the meaning of expressions such as “carrying on the business of a skin dealer” (see *Smith v. Capewell* (1979) 142 CLR 509 at pp 514-515, 517-518) are not strictly part of the law relating to Australian income tax and are therefore not made relevant by Art. 3(2). In any case, the use of the term “business” distinguishes such phrases from that presently under consideration. If Australian income tax law does not ascribe a particular meaning to “carry on” otherwise than by reference to its association with “carry out”, then it provides no assistance in ascertaining the meaning of “carry on” in the context of the Agreement, because those words are not used in association with “carry out” in the Agreement (cf. the expression “the carrying out of international conventions” in Art. 22(3)).<sup>[282]</sup>

Dawson J said,

<sup>279</sup> Para. 5 [OECD Model: Commentary on Article 15](#) (2017).

<sup>280</sup> Id., at para. 4.

<sup>281</sup> *Thiel* (1990), *supra* n. 134, at 4.

<sup>282</sup> Id, at 7.

[t]his provision [article 3(2)] is, however, of no assistance because, as will be seen, the case turns upon the meaning of the term “enterprise” and that term has no established meaning in Australian tax law. It is from the Agreement itself that the meaning of the term must be deduced.<sup>[283]</sup>

McHugh J said,

[t]he Agreement does not define the terms “enterprise”, “profits” and “business profits.” Nor does it define the compound expressions “profits of an enterprise” and “enterprise carried on.” Moreover, none of these terms or expressions has any settled meaning in Australian income tax law. ... But the narrow meaning given to the words “carrying on” in s. 26(a) is the product of its juxtaposition with the words “carrying out” in the same paragraph. Judicial decisions on the expression “carrying on” in the context of s. 26(a) of the Income Tax Assessment Act, therefore, cannot be regarded as settling the meaning of the expression “carried on” in Art. 3(1)(f) or the expression “carries on” in Art. 7(1). It follows that, within the meaning of Art. 3(2), none of the relevant terms or expressions in the Agreement has any particular or settled meaning in Australian income tax law. The meaning of those terms and expressions must be ascertained from the Agreement.<sup>[284]</sup>

While the context required that “carried on” should not be interpreted in accordance with domestic law, as the context in which it was used in domestic law was different, it would have been possible to reach the same conclusion, that “enterprise” included transactions that were entered into for business or commercial purposes, by equating “enterprise” to business in domestic law, and profit to taxable income in domestic law (in fact the Australian International Tax Agreements Act 1953, which gives effect to treaties in domestic law, says that profits means taxable income). This would be on the basis that one of the essential purposes of “enterprise” in the OECD Model is to differentiate between self-employment and employment income as far as individuals are concerned. On the basis suggested in section 4.3.2. that “term” should include the equivalent domestic law concept rather than a concept using the same term only, enterprise can be equated to the heading under which self-employment income is taxed in domestic law, for example, in the UK profits of a trade, profession or vocation. If domestic law were not used, taxability under domestic law would not equate to exemption under the tax treaty. For instance, assume that the facts are such that, under the tax treaty, employment income is taxable and self-employment income is exempt (for example, there is no PE and the person is present in the state for more than 183 days) and that, in one state, what is domestic law self-employment income becomes treaty employment income because a common meaning of each of them is agreed. The effect is that, in that state, part of what was domestic self-employment income becomes taxable employment income for treaty purposes. Whether or not tax is actually charged on this part, as permitted by the tax treaty, depends on domestic law under which the income is still self-employment income; if domestic law also applies a PE threshold, it will not be taxed, with the result that the change of definition has no effect. It should be noted that a move in the opposite direction, i.e. increasing the scope of exempt self-employment income for treaty purposes, would be effective because there is no problem in the tax treaty exempting from tax as self-employment income something that was employment income in domestic law.

<sup>283.</sup> Id., at 3.

<sup>284.</sup> Id., at 11.

It has been argued by Lang (2011)<sup>[285]</sup> that domestic law cannot be used to interpret “enterprise”, as it is now a defined expression (“the term ‘enterprise’ applies to the carrying on of any business” and that “the term ‘business’ includes the performance of professional services and of other activities of an independent character”). It was suggested in section 4.3.2. in relation to inclusive definitions that these do not exclude the possibility of domestic law being applied outside the scope of the words of inclusion, and the same argument would be made here. Lang (2011) adds that

[t]he result cannot be qualified by the contradictory statements in para 10.2 of the OECD Commentary 2000, which partly refer to an autonomous interpretation and partly to an interpretation in reliance on national law.<sup>[286]</sup>

That paragraph states that “business” should have its domestic law meaning, but, in view of the definition that it includes professional services, it must be given a treaty meaning to include professional services even though it does not do so in domestic law. It can be argued to the contrary that this is a case where the domestic meaning of business (assuming it to exclude professional services) is used, but enlarged so as to include professional services (also defined using its domestic meaning). Applied to what is suggested to be the UK equivalent of “enterprise”, trade, profession or vocation, it would have excluded professions when the tax treaty contained article 14 of the OECD Model, but included them when that article is excluded and the new definitions apply. As the taxation of trades and professions are the same, this makes no practical difference. It is suggested that this is not a case where the context otherwise requires.

It is possible for the Commentaries on the OECD Model to say that domestic law applies to a term, but that there are limits beyond which domestic law may not go. This is a case with article 3(2) of the OECD Model applying, but the Commentary on Article 3(2) of the OECD Model setting limits, so that it is only beyond the limit that the context requires that domestic law not be applied. An example can be found in connection with the meaning of employer in article 15 of the OECD Model where the Commentary on Article 15 of the OECD Model<sup>[287]</sup> deals with the possibility that domestic law permits a state to question a formal contractual relationship, but sets limits to be applied on the basis of objective criteria beyond which domestic law may not go.

#### 5.1.2.4.2.6. Interest

The definition of interest applies for the purposes of article 11 of the OECD Model only. The term “interest” is also used in the deductibility non-discrimination provision in article 24(4) of the OECD Model. If in domestic tax law a state defines interest paid to a non-resident to be a dividend in the case of thin capitalization, applying domestic law prevents the application of the non-discrimination provision and so this might be a case where the context requires that domestic law should not be used.

## 5.2. Specific treaty interpretation issues

### 5.2.1. General legal culture: Use of Parliamentary material, binding decisions of higher courts

There is an incorrect tendency for courts to adopt practices that apply to domestic law when interpreting tax treaties. This may include referring to unilateral documents, such as Parliamentary proceedings. Unilateral material should never be used to interpret a tax treaty (see section 2.2.7.), although there are cases where the treaty partner state's material has been relied on.

The extent to which courts are prepared to consider court decisions in other jurisdictions may depend on how it regards domestic cases. Common law courts are used to citing foreign cases and may be more willing to do so in relation to tax treaties. While cases in other jurisdictions are never binding, it is proper to give greater weight to a decision of a higher court particularly when the lower courts in the country concerned would be bound by it. But, if in that country little attention would be paid to the decision of a lower court, it would be inappropriate for courts in another country to give it great weight. See section 3.5.2. for a discussion of the relevance of court decisions in other countries.

In countries where decisions of higher courts bind lower courts, it is possible that a higher court may have given a decision on interpretation of the same wording in another tax treaty. There would be a tendency for a lower court to follow this decision when interpreting a different tax treaty, but there are dangers to this practice, particularly when the higher court was influenced by the Commentaries on the OECD Model, which may have been different when the tax treaty being interpreted was concluded.

### 5.2.2. Variation in state practice

#### 5.2.2.1. Australia

Contrary to the [Vienna Convention \(1969\)](#), recourse to unilateral material, such as the Explanatory Memorandum produced by Australia in relation to each tax treaty, is possible, but it has lesser weight than bilateral material.<sup>[288]</sup>

#### 5.2.2.2. United States

Courts in the United States give great weight to the views of the tax authorities. Another expression is that they give “deference to the consistent interpretation of the treaty advanced by the US agencies charged with its administration”, but they do not regard such material as “controlling” (and in the case where this observation was made the court in fact decided against the position of the tax authorities),<sup>[289]</sup> although the US [CA](#) noted that “an agency’s position merits less deference where an agency and another country disagree on the meaning of a treaty”.<sup>[290]</sup> Giving such weight to the views of the tax authorities is not permissible under the [Vienna Convention \(1969\)](#) (which the United States has not ratified) and the [HC](#) in the United Kingdom has refused to follow a US decision on the same wording of another tax treaty on this ground.<sup>[291]</sup> There is dispute regarding the relevance of testimony from treaty negotiators regarding the meaning and interpretation of a tax treaty. There are examples of a court acknowledging such testimony in the form of affidavits submitted to the courts, for example, the [CA](#).<sup>[292]</sup> In another case, *National Westminster Bank* (2008),<sup>[293]</sup> the taxpayer apparently submitted affidavits

<sup>288.</sup> See paras. 116 and 117 of [ATO TR 2001/13](#); see para. 101 et seq. for the views of the ATO on various kinds of material.

from individuals who had been involved in the negotiation of the [United Kingdom-United States Income and Capital Tax Treaty \(1975\)](#). The court did not refer to this information in its decision.

### 5.2.2.3. Spain

There is case law with regard to the effects of article 9 of the OECD Model and the corresponding provision of tax treaties that attributes to domestic transfer pricing provisions an effect they do not have. Domestically, the *Ley del Impuesto sobre Sociedades* (Corporate Income Tax Law, [LIS](#))<sup>[294]</sup> is regarded as a valuation provision, but courts have decided that provisions corresponding to article 9 (in tax treaties) can be used to recharacterize and/or disregard transactions and/or structures used by taxpayers. (It should be noted that Spain has a general anti-avoidance rule ([GAAR](#)) in article 15 of the LIS, but, according to the [TS](#),<sup>[295]</sup> this requires the application of a specific procedure that is by-passed with the administrative and/or judicial doctrine on the effects of article 9 of the OECD Model.)

### 5.2.3. Common treaty terminology

#### 5.2.3.1. “Shall be taxable only” versus “may be taxed”

The following two phrases are adopted throughout the OECD Model: (i) income that “may be taxed” in a contracting state (for example, articles 6, 7(1) (if there is a PE), 10, 11, 13(1), (2) and (4), 15(1) and (3), 16, 17, 21(1), and 22(1) and (2)); and (ii) income that “shall be taxable only” in a contracting state (for example, articles 8(1) and (2), 12, 13(3) and (5), 15(2), 18, 19, and 22(3) and (4)). The expression “may be taxed” means that the income “may be taxed” in the state in question, but says nothing about its taxation in the other state. By implication, the income “may be taxed” also in the second state, in which case the tax treaty will provide for relief from double taxation. The expression “shall be taxable only” means what it says and prevents the other state from taxing.<sup>[296]</sup>

Sometimes, tax treaties modify the OECD Model without fully taking the implications into account. Suppose a tax treaty does not have a tie-breaker to resolve dual residence, but merely states that the parties shall endeavour to settle the question by mutual agreement. The tax treaty, therefore, envisages that they may be unable to do so. How then should, for example, a statement that certain capital gains “shall be taxable only in the Contracting State of which the alienator is a resident” be read? Such a formula works well in the OECD Model, as there will be only one contracting state of which the alienator is a resident, but, under a tax treaty that does not necessarily resolve dual residence, it is not meaningful to say that the gain is taxable only in the contracting state of which the alienator is a resident, when presumably the intended result is that it is taxable in both states (which leaves open the question of who gives relief for the other state’s tax first). Currently, treaty negotiators usually provide an express rule that, in the absence of an agreement, the person is not entitled to benefits under the tax treaty. This is the case under the dual residence provisions of the [MLI](#) relating to companies, according to which, in the absence of agreement, the person is not entitled to any relief or exemption from tax provided by the covered tax treaty, except as may be agreed (see section [5.3.1.](#)).

<sup>294.</sup> ES: [Ley del Impuesto sobre Sociedades](#) [Corporate Income Tax Law, LIS], art. 16, National Legislation IBFD.

<sup>295.</sup> ES: TS, 18 July 2012, Ren. No. 3779/2009.

<sup>296.</sup> Paras. 6 and 7 [OECD Model: Commentary on Article 23](#) (2017).

### 5.2.3.2. “Liable to tax” versus “subject to tax”

#### 5.2.3.2.1. The matter in question

Article 4 uses the expression “liable to tax” in relation to a person; and, although not used in the OECD Model itself, the Commentaries on the OECD Model contains a number of alternatives<sup>[297]</sup> that use the expression “subject to tax” in relation to income. “Subject to tax” provisions are also found in many older tax treaties, especially those of the United Kingdom; they were replaced in many cases by the introduction of beneficial ownership provisions, which serve a similar purpose. Unfortunately, it is possible to find tax treaties that do not conform to this distinction between persons being “liable to tax” and income being “subject to tax” in English. For instance, the Australia-Germany Income and Capital Tax Treaty (1972)<sup>[298]</sup> says “the term ‘person’ means an individual, a company and any other entity subject to tax”, thus applying “subject to tax” to a person (the German uses “*Besteuerung unterliegen*”, the term normally used in relation to income).

#### 5.2.3.2.2. “Liable to tax”

The term “liable to tax” in article 4(1) of the OECD Model (“*assujettie à l’impôt*” in the French version) means that the person is potentially taxable on at least some foreign income (if he were taxable only on domestic income the second sentence of article 4(1) would prevent him from being a resident for treaty purposes). There is no requirement that the person should be actually taxed on the income in question. This is because residence is an attribute of a person and a person is either resident or not. Historically, some countries applied tax treaties to nationals and a person was either a national or not; there would be no question of being a national in respect of certain types of income.

#### 5.2.3.2.3. “Subject to tax”

##### 5.2.3.2.3.1. In English

The term “subject to tax” means that the income is actually taxed (or would be taxed, but for the effect of some other relief, such as relief for losses, but not an exemption). It is used in relation to particular items of income, as in this provision in the Commentary on Article 1 of the OECD Model dealing with remittance basis taxation:

Where under any provision of this Convention income arising in a Contracting State is relieved in whole or in part from tax in that State and under the law in force in the other Contracting State a person, in respect of the said income, is subject to tax [*soumise à l’impôt*] by reference to the amount thereof which is remitted to or received in that other State and not by reference to the full amount thereof, then any relief provided by the provisions of this Convention shall apply only to so much of the income as is taxed in the other Contracting State ...<sup>[299]</sup>

Although expressed in terms of the person being subject to tax, the provision operates only on particular items of income (“in respect of the said income”) that are taxable on the remittance basis, and so is categorized as relating to income rather than the person (where the item of income is not relevant to liability to tax). The implication is that a resident (a person “liable to tax”) need not be “subject to tax” on

<sup>297.</sup> See, for example, paras. 26 and 38 of the [Commentary on Article 1 of the OECD Model](#) (2017) and para. 15(d) of the [Commentary on Article 18 of the OECD Model](#) (2017).

<sup>298.</sup> The [Austri.-Ger. Income and Capital Tax Treaty](#) (1972), Treaties IBFD.

<sup>299.</sup> Para. 108 [OECD Model: Commentary on Article 1](#) (2017).

all foreign income. It is sufficient if he is taxable on foreign income if, for example, it is remitted to the United Kingdom; hence, the need for this provision to deny treaty benefits to income that is not “subject to tax” because it is not remitted.

#### 5.2.3.2.3.2. Other languages

##### 5.2.3.2.3.2.1. Initial comments

The distinction between expressions used for persons and for income noted in section 5.2.3.2.3.1. regarding the English version of the OECD Model is not always found in other languages, as the following examples from French (see section 5.2.3.2.3.2.2.) and German (see section 5.2.3.2.3.2.3.) tax treaties illustrate. No distinction between the two expressions is made in the Spanish language, and so the meaning must be deducted from the context. See section 5.2.3.2.3.2.4. for comments regarding tax treaties involving the Baltic States.

##### 5.2.3.2.3.2.2. In French

French has two expressions, “*assujettie à l’impôt*” and “*soumis à l’impôt*”, but the same distinction as in English, applying one to persons and the other to income, is not made, as they are both used interchangeably in relation to persons, with the former being preferred in a legal context, while the latter is used of income. The earlier Commentaries on the OECD Model contain some variations on this, probably as different provisions were drafted by different people at different times, but these have been improved in the 2017 version. In an alternative provision in the OECD Commentaries, where the English is “subject to tax” in relation to income, the expression<sup>[300]</sup> “*soumis à l’impôt*” is used in French, and, in another,<sup>[301]</sup> a different expression, “*ne sont pas imposables*”, is used. In another draft,<sup>[302]</sup> where the English uses “liable to tax” in relation to persons, the French uses both expressions (paragraph 3(b) of the OECD Commentary on Article 28 being explained by the fact that it includes other obligations):

Table 1. Alternative provision in paragraph 3 of the OECD Commentary on Article 28: English versus French

<p>Notwithstanding the provisions of Article 4, an individual who is a member of a diplomatic mission or a consular post of a Contracting State which is situated in the other Contracting State or in a third State shall be deemed for the purposes of the Convention to be a resident of the sending State if:</p> <p>(a) in accordance with international law he is not <i>liable to tax</i> in the receiving State in respect of income from sources outside that State or on capital situated outside that State, and</p> <p>(b) he is <i>liable</i> in the sending State to the same obligations in relation to tax on his total</p>	<p><i>Nonobstant les dispositions de l’article 4, toute personne physique qui est membre d’une mission diplomatique ou d’un poste consulaire d’un État contractant qui est situé dans l’autre État contractant ou dans un État tiers est considérée, aux fins de la Convention, comme un résident de l’État accréditant, à condition:</i></p> <p>(a) <i>que, conformément au droit international, elle ne soit pas assujettie à l’impôt dans l’État accréditaire pour les revenus de sources extérieures à cet État ou pour la fortune située en dehors de cet État, et</i></p>
---	---

<sup>300.</sup> Para. 15(d) OECD Model: Commentary on Article 18 (2017).

<sup>301.</sup> Para. 2 OECD Model: Commentary on Article 28 (2017).

<sup>302.</sup> Id., at para. 3.

income or on capital as are residents of that State.

*qu'elle soit soumise dans l'État accréditant aux mêmes obligations, en matière d'impôts sur l'ensemble de son revenu ou de sa fortune, que les résidents de cet État* [emphasis added].

A survey of Canadian tax treaties, all of which are in French and English, reveals that, while the equivalent of article 4 uses “liable to tax”/“*assujettie à l'impôt*”, most tax treaties contain provisions not based on the OECD Model using “subject to tax”/“*assujettie à l'impôt*” in relation to income (with a few exceptions where “*soumis à l'impôt*” or some other expression is used). There is also a consistent use of “liable to tax”/“*soumis à l'impôt*” in relation to a different provision relating to diplomats which contains a provision similar to paragraph (b) quoted previously from the alternative provision contained in paragraph 3 of the Commentary on Article 28 of the OECD Model. In tax treaties containing the remittance provision similar to the one in paragraph 108 of the OECD Commentary on Article 1, some use “*assujettie*” (as did the former France-United Kingdom Income Tax Treaty (1968), referred to in section 3.7.1.) and others use “*soumis*”, applied to income.

#### 5.2.3.2.3.2.3. In German

German also has different expressions: “*ist steuerpflichtig*”, which is the equivalent of “liable to tax” in article 4 of the OECD Model, and “*wird besteuert*” (literally, “is taxed”), and also “*unterliegt der Besteuerung*”/“*unterliegt der Steuer*”/“*unterliegt dem Steuersatz*”. These are generally used consistently in relation to persons and income respectively. Exceptions can, however, be found. The remittance provision in the Germany-United Kingdom Income Tax Treaty (2010),<sup>[303]</sup> which can be categorized as relating to income, uses “*steuerpflichtig*”.

#### 5.2.3.2.3.2.4. In tax treaties involving the Baltic states

There are a few examples of tax treaties in which it is unclear as to whether “subject to tax” is applied to persons in respect of income generally or to particular types of income. For example, the Lithuania-United Kingdom Income Tax Treaty (2001)<sup>[304]</sup> states as follows:<sup>[305]</sup>

Notwithstanding the provisions of any other Article of this Convention, a resident of a Contracting State who, as a consequence of domestic law concerning incentives to promote foreign investment, is not subject to tax or is subject to tax at a reduced rate in that Contracting State on income or capital gains, shall not receive the benefit of any reduction in or exemption from tax provided for in this Convention by the other Contracting State if the main purpose or one of the main purposes of such resident or a person connected with such resident was to obtain the benefits of this Convention.

The French text of the Canadian tax treaties with the Baltic States,<sup>[306]</sup> which is equally authentic (as are the Estonian, Latvian and Lithuanian texts), reads as follows:

<sup>303.</sup> The Ger.-UK Income and Capital Tax Treaty (2010), Treaties IBFD.

<sup>304.</sup> The Lith.-UK Income Tax Treaty (2001), Treaties IBFD.

<sup>305.</sup> See also the Est.-UK Income Tax Treaty (1994), Treaties IBFD; the Lat.-UK Income Tax Treaty (1996), Treaties IBFD; and the Taiwan-UK Income Tax Agreement (2002), Treaties IBFD.

<sup>306.</sup> The Can.-Est. Income and Capital Tax Treaty (1995), Treaties IBFD; the Can.-Lat. Income and Capital Tax Treaty (1996), Treaties IBFD; and the Can.-Lith. Income and Capital Tax Treaty (1996), Treaties IBFD.

*Nonobstant les dispositions d'un article quelconque de la présente Convention, un résident d'un État contractant qui, suite à l'application de la législation interne concernant les mesures d'encouragement à la promotion des investissements étrangers, n'est pas assujetti à l'impôt dans cet État contractant, ou y est assujetti à un taux réduit, sur les bénéfices, revenus ou gains, n'a pas droit aux bénéfices des réductions ou exonérations d'impôt prévues en vertu de la présente Convention par l'autre État contractant si le but principal ou l'un des buts principaux de tel résident ou de personnes qui lui sont associées était de tirer avantage des bénéfices de la présente Convention.*

Although drafted in terms of a resident not being “subject to tax” (or being “subject to tax” at a reduced rate, which must apply to particular income), it may impliedly relate to particular income, as the reduction in or exemption from tax must apply to particular income and there would be no point in the provision in relation to income that is fully “subject to tax”.

### 5.2.3.3. “Avoidance” and “evasion” in English and French

As mentioned in section 3.4.10., the MLI has added a reference to preventing avoidance and evasion to the preamble to the OECD Model as part of the minimum standard for protection against the abuse of tax treaties under BEPS Action 6. Paragraph 23 of the Explanatory Statement to the MLI states that “[t]he inclusion of this reference in the preamble is intended to clarify the intent of the Parties to ensure that CTAs be interpreted in line with the preamble language foreseen in Article 6(1)”. The distinction between “avoidance” and “evasion” is clear in English in the tax context, and the Explanatory Statement discusses the French equivalents “*d’évasion ou de fraude fiscale*” and “*évitement fiscal*”, the last of these being the term used for tax avoidance in certain countries.

## 5.3. The Multilateral Instrument

### 5.3.1. General effect

The MLI, developed as Action 15 of the BEPS Project, was prepared by an ad hoc group of 99 countries. It is accompanied by an Explanatory Statement, also approved by the ad hoc group. It has now been signed by 78 jurisdictions and is open for signature by more (six more jurisdictions having already indicated their intention to do so).<sup>[307]</sup> The MLI takes the novel form of a multilateral treaty modifying bilateral tax treaties (CTAs) made between the parties to it. It will continue to exist together with the CTAs so that, in any given case, both will have to be considered. Parties have to list the CTAs and can accordingly decide not to modify all of them. The MLI contains a limited number of opt-out provisions in so far as they relate to the minimum standards set down by the BEPS Project. For provisions not forming part of the minimum standards, states may opt out of the provision entirely (or in part) by means of permitted reservations. In addition, states may opt out of provisions of the MLI to preserve existing provisions that have specific, objectively defined characteristics (examples of this are found in reservations (b) to (d) in section 5.3.2.).

The method adopted by the MLI may be illustrated by the following example relating to dual resident entities. The OECD Model currently resolves the dual residence of persons other than individuals by

<sup>307</sup>. See <http://www.oecd.org/tax/treaties/beps-ml-signatories-and-parties.pdf>. Country-by-country status overview of the positions taken by the signatories to the MLI, with links to more detailed information, can be found in IBFD’s MLI Country Monitor, available at <https://online.bfd.org/kbase/#topic=mlit-compare&format=ghtml>.

reference to place of effective management. The MLI replaces this in the CTA by a provision (the new provision) that the competent authorities shall endeavour to determine by mutual agreement (a stand-alone provision not related to article 25 of the OECD Model, thus denying the possibility of arbitration because there would not be taxation otherwise than in accordance with the CTA)<sup>[308]</sup> the jurisdiction in which the entity is resident for treaty purposes having regard to various listed factors. In the absence of such an agreement, the person is not entitled to any relief or exemption from tax, except as agreed. This is stated to apply *in place of or in the absence of* any dual residence provisions relating to persons other than individuals in the CTA, so that potentially applies in all cases, but not tie-breaker provisions specifically addressing dual-listed companies (a narrower concept than entities other than individuals).<sup>[309]</sup>

### 5.3.2. Permitted reservations

The permitted reservations are:

- (a) to opt out of the new provision entirely in its CTAs (39 of the original signatories have made this reservation);
- (b) not to apply it where the CTA contains provisions requiring parties to endeavour to resolve dual residence by mutual agreement (Ireland and Russia are examples of states adopting this reservation in respect of treaties containing this provision);
- (c) not to apply it where the CTA denies treaty benefits to dual residents completely without requiring resolution by mutual agreement (Indonesia and Mexico are examples);
- (d) not to apply it where the CTA requires the parties to endeavour to resolve the dual residence by mutual agreement and also sets out the treatment where agreement cannot be reached, so that this treatment can be different from that in the new provision (Mexico and Romania are examples);
- (e) to provide instead that, in the absence of mutual agreement, the person is not entitled to any relief or exemption, so that there is no possibility of giving relief by agreement (four jurisdictions have made this reservation); and
- (f) not to apply the new provision where the reservation in (e) is made by the other party, so as not to apply the new provision at all (otherwise it would be bound to apply the article as modified by (e) in accordance with the first party's reservation)<sup>[310]</sup> (Ireland is an example).

Parties making reservations must notify the depositary of the article numbers of the CTAs not modified by reservations in (b) to (d), all of which relate to existing treaty provisions, in which case the new provision will apply (or will apply as modified by reservation (e)) where both parties make no such reservations. If only one party to a CTA makes for example the reservation in (d), the CTA provision will continue to apply. If the two parties to the CTA make different reservations, for example one adopting reservation (c) and the other (e), the CTA provision would also continue to apply. Since reservations (b) to (d) depend on the terms of the CTA there is less scope for divergent reservations, but even so one party may not necessarily want to continue with the solution in the CTA. Alternatively, if one party opts out of the new provision under reservation (a) and the other party makes no reservation, again

<sup>308</sup>. See para. 58 Explanatory Statement to the MLI.

<sup>309</sup>. See para. 53 Explanatory Statement to the MLI.

<sup>310</sup>. See the effect of a reservation to modify the treaty with respect to all other parties (and the other party in the treaty with the reserving party) in article 28(3) of the MLI and paragraph 270 of the Explanatory Statement to the MLI.

the existing CTA provision (if any) would continue to apply. There can be partial application of the new provision, for example if one party makes reservation (e) and the other does nothing, the new provision will apply with the last sentence modified in accordance with reservation (e).<sup>[311]</sup>

Since the effect of the MLI on a particular CTA depends on the reservations made by both parties, it is hoped that states will agree how each particular treaty is modified. There are provisions in article 29 of the MLI for provisional notifications (or expected notifications) of how these operate on a particular CTA on signature (which most countries provided but Norway's followed later) and for final notifications at the time of ratification. If disagreements arise in the last resort they are settled by a conference of the parties in accordance with article 31.

### 5.3.3. Interpretation of the MLI

Since the MLI contains provisions substituting for those in the CTA, but without incorporating them into the CTA because the MLI provision continues to exist, the interpretation of the MLI is a topic in its own right that is dealt with below.

The MLI contains its own interpretation provision in article 2(2) of the MLI that “[a]s regards the application of this Convention at any time by a Party, any term not defined herein shall, unless the context otherwise requires, have the meaning that it has at that time under the relevant CTA”. This contains no reference to domestic law but, assuming that article 3(2) of the OECD Model is contained in the CTA, this provides a route to using domestic law. The absence of any reference to domestic law in article 2(2) of the MLI may be explained by the problems regarding the question of whose domestic law that this would cause in a multilateral treaty. For example, there could be no equivalent to looking at the other state's domestic law as in CTAs. Since the MLI contains provisions substituting for those in the CTA, but without incorporating them into the CTA as the MLI provision continues to exist, this has to be read fairly widely to make the MLI work. This is done by reading “the meaning that it has” to include “the meaning that it had” before the MLI in the case of an MLI provision applying in place of one in the CTA and also the meaning that it would have in the future if it had been contained in the CTA and domestic law changes. A more difficult case is where the MLI provision applies in the absence of a CTA provision, or modifies an existing provision by introducing a term not used in the CTA, where one needs to read “has” as including “would have had” if the provision had been contained in the CTA. While this is at the limit of interpretation as opposed to rewriting, a difference depending on whether the term was used in the CTA originally or only as a result of the MLI makes no sense so that the author considers that one should imply this extended meaning. Fortunately, there seem to be few provisions in the MLI that use new undefined terms,<sup>[312]</sup> but it is a pity that this was not dealt with more clearly.

As far as explanatory material is concerned, the MLI has its own Explanatory Statement, which states as follows:

It therefore reflects the agreed understanding of the negotiators with respect to the Convention. It includes descriptions of the types of treaty provisions which are intended to be covered and the ways in which they are intended to be modified. The members of the ad hoc group adopted

<sup>311.</sup> See *supra* n. 23.

<sup>312.</sup> A possible example is in the expression in article 9 of the MLI, “shares or comparable interests, such as interests in a partnership or trust”, where domestic law can be used to interpret “partnership”, because it is used in the definition of national in the CTA following the OECD Model, but not “trust”, assuming that the term is not used elsewhere in the CTA.

this Explanatory Statement on 24 November 2016 at the same time as adopting the text of the Convention.

In terms of the [Vienna Convention \(1969\)](#), this is therefore context under article 31(2)(a) in relation to the 99 members of the ad hoc group that negotiated the MLI (on the basis that they adopted it at the same time as the text and it is therefore in connection with the conclusion of the MLI when this is signed by those countries even though it was adopted before its conclusion). In relation to another state signing the MLI (see article 27) it would be context under article 31(2)(b) only so long as the state accepted it as an instrument related to the MLI, which it could do by signing the MLI and adopting the Explanatory Statement. The Explanatory Statement deals with such things as explaining the effect of permitted reservations and the resolution of conflicts between them.

As far as the substantive provisions of the MLI modifying the CTAs are concerned, the Commentary on the relevant [BEPS](#) provision will apply in a similar way as the Commentary on the OECD Model and would seem to have similar status. The Explanatory Statement says that they should be interpreted in accordance with normal treaty interpretation provisions, quoting the wording of article 31 of the Vienna Convention (1969) and stating that: “In this regard, the object and purpose of the Convention is to implement the tax treaty-related BEPS measures”. This makes it clear that BEPS reports should be considered for interpretation purposes as object and purpose rather than context. The Explanatory Statement also provides that any deviation in the wording from the BEPS provisions are not intended to make substantive changes, but merely to deal with the fact of the MLI amending numerous CTAs.

A further interpretative complication is that the MLI (and the Explanatory Statement) is in English and French, which are equally authentic (see the final clause of the MLI), whereas the CTA that it amends may be in a completely different language, or in one of these languages, and may often provide for a third language text to prevail in case of inconsistencies. The effect is that for a CTA solely in English some provisions are substituted, without actually incorporating them into the CTA, with equally authentic English and French versions, and similarly for a treaty solely in French, which seems to add an unnecessary complication, since under article 33(3) of the Vienna Convention (1969) both language texts are presumed to have the same meaning, but may in fact have different meanings. It is worse for a CTA in, say, Spanish and German with an English prevailing text, as substituted provisions will be in equally authentic English and French with no prevailing text. Many states need a text in their own language for use by Parliament but it is thought that this can be satisfied by a non-authentic text. If states do not like different languages being used for part of their treaties they are permitted by article 30 of the MLI to modify their CTAs, which could reproduce the MLI material in the same language(s) as the rest of the treaty. While this has the advantage of consistency, it would defeat the point of having only two authentic language texts of the MLI, the interpretation of which could develop unhindered by further language versions.

See section [3.4.10](#) on the possible effect on interpretation of the change in the preamble to tax treaties made by the MLI and section [5.2.3.3](#) on avoidance and evasion.

**Model Tax Convention  
on Income and on Capital**

**Preamble**

**CONDENSED VERSION**

**28 JANUARY 2003**

**OECD Committee on Fiscal Affairs**

**ORGANISATION FOR ECONOMIC CO-OPERATION**

**AND DEVELOPMENT**

Pursuant to Article 1 of the Convention signed in Paris on 14th December 1960, and which came into force on 30th September 1961, the Organisation for Economic Co-operation and Development (OECD) shall promote policies designed:

- to achieve the highest sustainable economic growth and employment and a rising standard of living in Member countries, while maintaining financial stability, and thus to contribute to the development of the world economy;
- to contribute to sound economic expansion in Member as well as non-member countries in the process of economic development; and
- to contribute to the expansion of world trade on a multilateral, non-discriminatory basis in accordance with international obligations.

The original Member countries of the OECD are Austria, Belgium, Canada, Denmark, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The following countries became Members subsequently through accession at the dates indicated hereafter: Japan (28th April 1964), Finland (28th January 1969), Australia (7th June 1971), New Zealand (29th May 1973), Mexico (18th May 1994), the Czech Republic (21st December 1995), Hungary (7th May 1996), Poland (22nd November 1996), Korea (12th December 1996) and the Slovak Republic (14th December 2000). The Commission of the European Communities takes part in the work of the OECD (Article 13 of the OECD Convention).

**Date of Conclusion:** Not applicable.  
**Entry into Force:** Not applicable.  
**Effective Date:** Not applicable.

**COMMENTARY ON ARTICLE 1**

**CONCERNING THE PERSONS COVERED BY THE CONVENTION**

1. Whereas the earliest conventions in general were applicable to "citizens" of the Contracting States, more recent conventions usually apply to "residents" of one or both of the Contracting States irrespective of nationality. Some conventions are of even wider scope because they apply more generally to "taxpayers" of the Contracting States; they are, therefore, also applicable to persons, who, although not residing in either State, are nevertheless liable to tax on part of their income or capital in each of them. It has been deemed preferable for practical reasons to provide that the Convention is to apply to persons who are residents of one or both of the Contracting States. The term "resident" is defined in Article 4.

**Application of the Convention to partnerships**

2. Domestic laws differ in the treatment of partnerships. These differences create various difficulties when applying tax Conventions in relation to partnerships. These difficulties are analysed in the report by the Committee on Fiscal Affairs entitled "The Application of the OECD Model Tax Convention to Partnerships",<sup>[1]</sup> the conclusions of which have been incorporated below and in the Commentary on various other provisions of the Model Tax Convention.

3. As discussed in that report, a main source of difficulties is the fact that some countries treat partnerships as taxable units (sometimes even as companies) whereas other countries adopt what may be referred to as the fiscally transparent approach, under which the partnership is ignored for tax purposes and the individual partners are taxed on their respective share of the partnership's income.

4. A first difficulty is the extent to which a partnership is entitled as such to the benefits of the provisions of the Convention. Under Article 1, only persons who are residents of the Contracting States are entitled to the benefits of the tax Convention entered into by these States. While paragraph 2 of the Commentary on Article 3 explains why a partnership constitutes a person, a partnership does not necessarily qualify as a resident of a Contracting State under Article 4.

5. Where a partnership is treated as a company or taxed in the same way, it is a resident of the Contracting State that taxes the partnership on the grounds mentioned in paragraph 1 of Article 4 and, therefore, it is entitled to the benefits of the Convention. Where, however, a partnership is treated as fiscally transparent in a State, the partnership is not "liable to tax" in that State within the meaning of paragraph 1 of Article 4, and so cannot be a resident thereof for purposes of the Convention. In such a case, the application of the Convention to the partnership as such would be refused, unless a special rule covering partnerships were provided for in the Convention. Where the application of the Convention is so refused, the partners should be entitled, with respect to their share of the income of the partnership, to the benefits provided by the Conventions entered into by the States of which they are residents to the extent that the partnership's income is allocated to them for the purposes of taxation in their State of residence (cf. paragraph 8.4 of the Commentary on Article 4).

6. The relationship between the partnership's entitlement to the benefits of a tax Convention and that of the partners raises other questions.

6.1 One issue is the effect that the application of the provisions of the Convention to a partnership can have on the taxation of the partners. Where a partnership is treated as a resident of a Contracting State, the provisions of the Convention that restrict the other Contracting State's right to tax the partnership on its income do not apply to restrict that other State's right to tax the partners who are its own residents on their share of the income of the partnership. Some states may wish to include in their conventions a provision that expressly confirms a Contracting State's right to tax resident partners on their share of the income of a partnership that is treated as a resident of the other State.

6.2 Another issue is that of the effect of the provisions of the Convention on a Contracting State's right to tax income arising on its territory where the entitlement to the benefits of one, or more than one, Conventions is different for the partners and the partnership. Where, for instance, the State of source treats a domestic partnership as fiscally transparent and therefore taxes the partners on their share of the income of the partnership, a partner that is resident of a State that taxes partnerships as companies would not be able to claim the benefits of the Convention between the two States with respect to the share of the partnership's income that the State of source taxes in his hands since that income, though allocated to the person claiming the benefits of the Convention under the laws of the State of source, is not similarly allocated for purposes of determining the liability to tax on that item of income in the State of residence of that person.

<sup>1</sup> This report is reproduced in Volume II of the loose-leaf version of the OECD Model Tax Convention, at page R(15)-1.

6.3 The results described in the preceding paragraph should obtain even if, as a matter of the domestic law of the State of source, the partnership would not be regarded as transparent for tax purposes but as a separate taxable entity to which the income would be attributed, provided that the partnership is not actually considered as a resident of the State of source. This conclusion is founded upon the principle that the State of source should take into account, as part of the factual context in which the Convention is to be applied, the way in which an item of income, arising in its jurisdiction, is treated in the jurisdiction of the person claiming the benefits of the Convention as a resident. For States which could not agree with this interpretation of the Article, it would be possible to provide for this result in a special provision which would avoid the resulting potential double taxation where the income of the partnership is differently allocated by the two States.

6.4 Where, as described in paragraphs 6.2, income has "flowed through" a transparent partnership to the partners who are liable to tax on that income in the State of their residence then the income is appropriately viewed as "paid" to the partners since it is to them and not to the partnership that the income is allocated for purposes of determining their tax liability in their State of residence. Hence the partners, in these circumstances, satisfy the condition, imposed in several Articles, that the income concerned is "paid to a resident of the other Contracting State". Similarly the requirement, imposed by some other Articles, that income or gains are "derived by a resident of the other Contracting State" is met in the circumstances described above. This interpretation avoids denying the benefits of tax Conventions to a partnership's income on the basis that neither the partnership, because it is not a resident, nor the partners, because the income is not directly paid to them or derived by them, can claim the benefits of the Convention with respect to that income. Following from the principle discussed in paragraph 6.3, the conditions that the income be paid to, or derived by, a resident should be considered to be satisfied even where, as a matter of the domestic law of the State of source, the partnership would not be regarded as transparent for tax purposes, provided that the partnership is not actually considered as a resident of the State of source.

6.5 Partnership cases involving three States pose difficult problems with respect to the determination of entitlement to benefits under Conventions. However, many problems may be solved through the application of the principles described in paragraphs 6.2 to 6.4. Where a partner is a resident of one State, the partnership is established in another State and the partner shares in partnership income arising in a third State then the partner may claim the benefits of the Convention between his State of residence and the State of source of the income to the extent that the partnership's income is allocated to him for the purposes of taxation in his State of residence. If, in addition, the partnership is taxed as a resident of the State in which it is established then the partnership may itself claim the benefits of the Convention between the State in which it is established and the State of source. In such a case of "double benefits", the State of source may not impose taxation which is inconsistent with the terms of either applicable Convention therefore, where different rates are provided for in the two Conventions, the lower will be applied. However, Contracting States may wish to consider special provisions to deal with the administration of benefits under Conventions in situations such as these, so that the partnership may claim benefits but partners could not present concurrent claims. Such provisions could ensure appropriate and simplified administration of the giving of benefits. No benefits will be available under the Convention between the State in which the partnership is established and the State of source if the partnership is regarded as transparent for tax purposes by the State in which it is established. Similarly no benefits will be available under the Convention between the State of residence of the partner and the State of source if the income of the partnership is not allocated to the partner under the taxation law of the State of residence. If the partnership is regarded as transparent for tax purposes by the State in which it is established and the income of the partnership is not allocated to the partner under the taxation law of the State of residence of the partner, the State of source may tax partnership income allocable to the partner without restriction.

6.6 Differences in how countries apply the fiscally transparent approach may create other difficulties for the application of tax Conventions. Where a State considers that a partnership does not qualify as a resident of a Contracting State because it is not liable to tax and the partners are liable to tax in their State of residence on their share of the partnership's income, it is expected that that State will apply the provisions of the Convention as if the partners had earned the income directly so that the classification of the income for purposes of the allocative rules of Articles 6 to 21 will not be modified by the fact that the income flows through the partnership. Difficulties may arise, however, in the application of provisions which refer to the activities of the taxpayer, the nature of the taxpayer, the relationship between the taxpayer and another party to a transaction. Some of these difficulties are discussed in paragraphs 19.1 of the Commentary on Article 5 and paragraphs 6.1 and 6.2 of the Commentary on Article 15.

6.7 Finally, a number of other difficulties arise where different rules of the Convention are applied by the Contracting States to income derived by a partnership or its partners, depending on the domestic laws of these States or their interpretation of the provisions of the Convention or of the relevant facts. These difficulties relate to the broader issue of conflicts of qualification, which is dealt with in paragraphs 32.1 ff. and 56.1 ff. of the Commentary on Article 23.

### **Improper use of the Convention**

7. The principal purpose of double taxation conventions is to promote, by eliminating international double taxation, exchanges of goods and services, and the movement of capital and persons. It is also a purpose of tax conventions to prevent tax avoidance and evasion.

7.1 Taxpayers may be tempted to abuse the tax laws of a State by exploiting the differences between various countries' laws. Such attempts may be countered by provisions or jurisprudential rules that are part of the domestic law of the State concerned. Such a State is then unlikely to agree to provisions of bilateral double taxation conventions that would have the effect of allowing abusive transactions that would otherwise be prevented by the provisions and rules of this kind contained in its domestic law. Also, it will not wish to apply its bilateral conventions in a way that would have that effect.

8. It is also important to note that the extension of double taxation conventions increases the risk of abuse by facilitating the use of artificial legal constructions aimed at securing the benefits of both the tax advantages available under certain domestic laws and the reliefs from tax provided for in double taxation conventions.

9. This would be the case, for example, if a person (whether or not a resident of a Contracting State), acts through a legal entity created in a State essentially to obtain treaty benefits that would not be available directly. Another case would be an individual who has in a Contracting State both his permanent home and all his economic interests, including a substantial shareholding in a company of that State, and who, essentially in order to sell the shares and escape taxation in that State on the capital gains from the alienation (by virtue of paragraph 5 of Article 13), transfers his permanent home to the other Contracting State, where such gains are subject to little or no tax.

9.1 This raises two fundamental questions that are discussed in the following paragraphs:

- whether the benefits of tax conventions must be granted when transactions that constitute an abuse of the provisions of these conventions are entered into (cf. paragraphs 9.2 and following below); and
- whether specific provisions and jurisprudential rules of the domestic law of a Contracting State that are intended to prevent tax abuse conflict with tax conventions (cf. paragraphs 22 and following below).

9.2 For many States, the answer to the first question is based on their answer to the second question. These States take account of the fact that taxes are ultimately imposed through the provisions of domestic law, as restricted (and in some rare cases, broadened) by the provisions of tax conventions. Thus, any abuse of the provisions of a tax convention could also be characterised as an abuse of the provisions of domestic law under which tax will be levied. For these States, the issue then becomes whether the provisions of tax conventions may prevent the application of the anti-abuse provisions of domestic law, which is the second question above. As indicated in paragraph 22.1 below, the answer to that second question is that to the extent these anti-avoidance rules are part of the basic domestic rules set by domestic tax laws for determining which facts give rise to a tax liability, they are not addressed in tax treaties and are therefore not affected by them. Thus, as a general rule, there will be no conflict between such rules and the provisions of tax conventions.

9.3 Other States prefer to view some abuses as being abuses of the convention itself, as opposed to abuses of domestic law. These States, however, then consider that a proper construction of tax conventions allows them to disregard abusive transactions, such as those entered into with the view to obtaining unintended benefits under the provisions of these conventions. This interpretation results from the object and purpose of tax conventions as well as the obligation to interpret them in good faith (see Article 31 of the Vienna Convention on the Law of Treaties).

9.4 Under both approaches, therefore, it is agreed that States do not have to grant the benefits of a double taxation convention where arrangements that constitute an abuse of the provisions of the convention have been entered into.

9.5 It is important to note, however, that it should not be lightly assumed that a taxpayer is entering into the type of abusive transactions referred to above. A guiding principle is that the benefits of a double taxation convention should not be available where a main purpose for entering into certain transactions or arrangements was to secure a more favourable tax position and obtaining that more favourable treatment in these circumstances would be contrary to the object and purpose of the relevant provisions.

9.6 The potential application of general anti-abuse provisions does not mean that there is no need for the inclusion, in tax conventions, of specific provisions aimed at preventing particular forms of tax avoidance. Where specific avoidance techniques have been identified or where the use of such techniques is especially problematic, it will often be useful to add to the Convention provisions that focus directly on the relevant avoidance strategy. Also, this will be necessary where a State which adopts the view described in paragraph 9.2 above believes that its domestic law lacks the anti-avoidance rules or principles necessary to properly address such strategy.

10. For instance, some forms of tax avoidance have already been expressly dealt with in the Convention, e.g. by the introduction of the concept of "beneficial owner" (in Articles 10, 11, and 12) and of special provisions such as paragraph 2 of Article 17 dealing with so-called artiste-companies. Such problems are also mentioned in the Commentaries on Article 10 (paragraphs 17 and 22), Article 11 (paragraph 12) and Article 12 (paragraph 7).

10.1 Also, in some cases, claims to treaty benefits by subsidiary companies, in particular companies established in tax havens or benefiting from harmful preferential regimes, may be refused where careful consideration of the facts and circumstances of a case shows that the place of effective management of a subsidiary does not lie in its alleged state of residence but, rather, lies in the state of residence of the parent company so as to make it a resident of that latter state for domestic law and treaty purposes (this will be relevant where the domestic law of a state uses the place of management of a legal person, or a similar criterion, to determine its residence).

10.2 Careful consideration of the facts and circumstances of a case may also show that a subsidiary was managed in the state of residence of its parent in such a way that the subsidiary had a permanent establishment (e.g. by having a place of management) in that state to which all or a substantial part of its profits were properly attributable.

11. A further example is provided by two particularly prevalent forms of improper use of the Convention which are discussed in two reports from the Committee on Fiscal Affairs entitled "Double Taxation Conventions and the Use of Base Companies"

and "Double Taxation Conventions and the Use of Conduit Companies".<sup>2</sup> As indicated in these reports, the concern expressed in paragraph 9 above has proved to be valid as there has been a growing tendency toward the use of conduit companies to obtain treaty benefits not intended by the Contracting States in their bilateral negotiations. This has led an increasing number of Member countries to implement treaty provisions (both general and specific) to counter abuse and to preserve anti-avoidance legislation in their domestic laws.

12. The treaty provisions that have been designed to cover these and other forms of abuse take different forms. The following are examples derived from provisions that have been incorporated in bilateral conventions concluded by Member countries. These provide models that treaty negotiators might consider when searching for a solution to specific cases. In referring to them there should be taken into account:

- the fact that these provisions are not mutually exclusive and that various provisions may be needed in order to address different concerns;
- the degree to which tax advantages may actually be obtained by a particular avoidance strategy;
- the legal context in both Contracting States and, in particular, the extent to which domestic law already provides an appropriate response to this avoidance strategy, and
- the extent to which bona fide economic activities might be unintentionally disqualified by such provisions.

#### *Conduit company cases*

13. Many countries have attempted to deal with the issue of conduit companies and various approaches have been designed for that purpose. One solution would be to disallow treaty benefits to a company not owned, directly or indirectly, by residents of the State of which the company is a resident. For example, such a "look-through" provision might have the following wording:

"A company that is a resident of a Contracting State shall not be entitled to relief from taxation under this Convention with respect to any item of income, gains or profits if it is owned or controlled directly or through one or more companies, wherever resident, by persons who are not residents of a Contracting State."

Contracting States wishing to adopt such a provision may also want, in their bilateral negotiations, to determine the criteria according to which a company would be considered as owned or controlled by non-residents.

14. The "look-through approach" underlying the above provision seems an adequate basis for treaties with countries that have no or very low taxation and where little substantive business activities would normally be carried on. Even in these cases it might be necessary to alter the provision or to substitute for it another one to safeguard bona fide business activities.

15. General subject-to-tax provisions provide that treaty benefits in the State of source are granted only if the income in question is subject to tax in the State of residence. This corresponds basically to the aim of tax treaties, namely to avoid double taxation. For a number of reasons, however, the Model Convention does not recommend such a general provision. Whilst this seems adequate with respect to a normal international relationship, a subject-to-tax approach might well be adopted in a typical conduit situation. A safeguarding provision of this kind could have the following wording:

"Where income arising in a Contracting State is received by a company resident of the other Contracting State and one or more persons not resident in that other Contracting State

- a) have directly or indirectly or through one or more companies, wherever resident, a substantial interest in such company, in the form of a participation or otherwise, or
- b) exercise directly or indirectly, alone or together, the management or control of such company,

any provision of this Convention conferring an exemption from, or a reduction of, tax shall apply only to income that is subject to tax in the last-mentioned State under the ordinary rules of its tax law."

The concept of "substantial interest" may be further specified when drafting a bilateral convention. Contracting States may express it, for instance, as a percentage of the capital or of the voting rights of the company.

16. The subject-to-tax approach seems to have certain merits. It may be used in the case of States with a well-developed economic structure and a complex tax law. It will, however, be necessary to supplement this provision by inserting bona fide provisions in the treaty to provide for the necessary flexibility (cf. paragraph 19 below); moreover, such an approach does not offer adequate protection against advanced tax avoidance schemes such as "stepping-stone strategies".

17. The approaches referred to above are in many ways unsatisfactory. They refer to the changing and complex tax laws of the Contracting States and not to the arrangements giving rise to the improper use of conventions. It has been suggested that the conduit problem be dealt with in a more straightforward way by inserting a provision that would single out cases of improper use with reference to the conduit arrangements themselves (the channel approach). Such a provision might have the following wording:

"Where income arising in a Contracting State is received by a company that is a resident of the other Contracting State and one or more persons who are not residents of that other Contracting State

<sup>2</sup> These two reports are reproduced in Volume II of the loose-leaf version of the OECD Model Tax Convention, at pages R(5)-1 and R(6)-1.

- a) have directly or indirectly or through one or more companies, wherever resident, a substantial interest in such company, in the form of a participation or otherwise, or
- b) exercise directly or indirectly, alone or together, the management or control of such company

any provision of this Convention conferring an exemption from, or a reduction of, tax shall not apply if more than 50 per cent of such income is used to satisfy claims by such persons (including interest, royalties, development, advertising, initial and travel expenses, and depreciation of any kind of business assets including those on immaterial goods and processes)."

18. A provision of this kind appears to be the only effective way of combatting "stepping-stone" devices. It is found in bilateral treaties entered into by Switzerland and the United States and its principle also seems to underly the Swiss provisions against the improper use of tax treaties by certain types of Swiss companies. States that consider including a clause of this kind in their convention should bear in mind that it may cover normal business transactions and would therefore have to be supplemented by a bona fide clause.

19. The solutions described above are of a general nature and they need to be accompanied by specific provisions to ensure that treaty benefits will be granted in bona fide cases. Such provisions could have the following wording:

a) *General bona fide provision*

"The foregoing provisions shall not apply where the company establishes that the principal purpose of the company, the conduct of its business and the acquisition or maintenance by it of the shareholding or other property from which the income in question is derived, are motivated by sound business reasons and do not have as primary purpose the obtaining of any benefits under this Convention."

b) *Activity provision*

"The foregoing provisions shall not apply where the company is engaged in substantive business operations in the Contracting State of which it is a resident and the relief from taxation claimed from the other Contracting State is with respect to income that is connected with such operations."

c) *Amount of tax provision*

"The foregoing provisions shall not apply where the reduction of tax claimed is not greater than the tax actually imposed by the Contracting State of which the company is a resident."

d) *Stock exchange provision*

"The foregoing provisions shall not apply to a company that is a resident of a Contracting State if the principal class of its shares is registered on an approved stock exchange in a Contracting State or if such company is wholly owned - directly or through one or more companies each of which is a resident of the first-mentioned State - by a company which is a resident of the first-mentioned State and the principal class of whose shares is so registered."

e) *Alternative relief provision*

In cases where an anti-abuse clause refers to non-residents of a Contracting State, it could be provided that the term "shall not be deemed to include residents of third States that have income tax conventions in force with the Contracting State from which relief from taxation is claimed and such conventions provide relief from taxation not less than the relief from taxation claimed under this Convention."

These provisions illustrate possible approaches. The specific wording of the provisions to be included in a particular treaty depends on the general approach taken in that treaty and should be determined on a bilateral basis. Also, where the competent authorities of the Contracting States have the power to apply discretionary provisions, it may be considered appropriate to include an additional rule that would give the competent authority of the source country the discretion to allow the benefits of the Convention to a resident of the other State even if the resident fails to pass any of the tests described above.

20. Whilst the preceding paragraphs identify different approaches to deal with conduit situations, each of them deals with a particular aspect of the problem commonly referred to as "treaty shopping". States wishing to address the issue in a comprehensive way may want to consider the following example of detailed limitation-of-benefits provisions aimed at preventing persons who are not resident of either Contracting States from accessing the benefits of a Convention through the use of an entity that would otherwise qualify as a resident of one of these States, keeping in mind that adaptations may be necessary and that many States prefer other approaches to deal with treaty shopping:

"1. Except as otherwise provided in this Article, a resident of a Contracting State who derives income from the other Contracting State shall be entitled to all the benefits of this Convention otherwise accorded to residents of a Contracting State only if such resident is a "qualified person" as defined in paragraph 2 and meets the other conditions of this Convention for the obtaining of such benefits.

2. A resident of a Contracting State is a qualified person for a fiscal year only if such resident is either:

- a) an individual;
- b) a qualified governmental entity;

- c) a company, if
  - (i) the principal class of its shares is listed on a recognised stock exchange specified in subparagraph a ) or b ) of paragraph 6 and is regularly traded on one or more recognized stock exchanges, or
  - (ii) at least 50 per cent of the aggregate vote and value of the shares in the company is owned directly or indirectly by five or fewer companies entitled to benefits under subdivision i ) of this subparagraph, provided that, in the case of indirect ownership, each intermediate owner is a resident of either Contracting State;
- d) a charity or other tax-exempt entity, provided that, in the case of a pension trust or any other organization that is established exclusively to provide pension or other similar benefits, more than 50 per cent of the person's beneficiaries, members or participants are individuals resident in either Contracting State; or
- e) a person other than an individual, if:
  - (i) on at least half the days of the fiscal year persons that are qualified persons by reason of subparagraph a ), b ) or d ) or subdivision c ) i ) of this paragraph own, directly or indirectly, at least 50 per cent of the aggregate vote and value of the shares or other beneficial interests in the person, and
  - (ii) less than 50 per cent of the person's gross income for the taxable year is paid or accrued, directly or indirectly, to persons who are not residents of either Contracting State in the form of payments that are deductible for purposes of the taxes covered by this Convention in the person's State of residence (but not including arm's length payments in the ordinary course of business for services or tangible property and payments in respect of financial obligations to a bank, provided that where such a bank is not a resident of a Contracting State such payment is attributable to a permanent establishment of that bank located in one of the Contracting States).

A resident of a Contracting State will be entitled to benefits of the Convention with respect to an item of income, derived from the other State, regardless of whether the resident is a qualified person, if the resident is actively carrying on business in the first-mentioned State (other than the business of making or managing investments for the resident's own account, unless these activities are banking, insurance or securities activities carried on by a bank, insurance company or registered securities dealer), the income derived from the other Contracting State is derived in connection with, or is incidental to, that business and that resident satisfies the other conditions of this Convention for the obtaining of such benefits.

- b) If the resident or any of its associated enterprises carries on a business activity in the other Contracting State which gives rise to an item of income, subparagraph a ) shall apply to such item only if the business activity in the first-mentioned State is substantial in relation to business carried on in the other State. Whether a business activity is substantial for purposes of this paragraph will be determined based on all the facts and circumstances.
- c) In determining whether a person is actively carrying on business in a Contracting State under subparagraph a ), activities conducted by a partnership in which that person is a partner and activities conducted by persons connected to such person shall be deemed to be conducted by such person. A person shall be connected to another if one possesses at least 50 per cent of the beneficial interest in the other (or, in the case of a company, at least 50 per cent of the aggregate vote and value of the company's shares) or another person possesses, directly or indirectly, at least 50 per cent of the beneficial interest (or, in the case of a company, at least 50 per cent of the aggregate vote and value of the company's shares) in each person. In any case, a person shall be considered to be connected to another if, based on all the facts and circumstances, one has control of the other or both are under the control of the same person or persons.

4. Notwithstanding the preceding provisions of this Article, if a company that is a resident of a Contracting State, or a company that controls such a company, has outstanding a class of shares

- a) which is subject to terms or other arrangements which entitle its holders to a portion of the income of the company derived from the other Contracting State that is larger than the portion such holders would receive absent such terms or arrangements ("the disproportionate part of the income"); and
  - b) 50 per cent or more of the voting power and value of which is owned by persons who are not qualified persons
- the benefits of this Convention shall not apply to the disproportionate part of the income.

5. A resident of a Contracting State that is neither a qualified person pursuant to the provisions of paragraph 2 or entitled to benefits under paragraph 3 or 4 shall, nevertheless, be granted benefits of the Convention if the competent authority of that other Contracting State determines that the establishment, acquisition or maintenance of such person and the conduct of its operations did not have as one of its principal purposes the obtaining of benefits under the Convention.

6. For the purposes of this Article the term "recognized stock exchange" means:

- a) in State A .....;
- b) in State B .....; and
- c) any other stock exchange which the competent authorities agree to recognize for the purposes of this Article."

*Provisions which are aimed at entities benefiting from preferential tax regimes*

21. Specific types of companies enjoying tax privileges in their State of residence facilitate conduit arrangements and raise the issue of harmful tax practices. Where tax-exempt (or nearly tax-exempt) companies may be distinguished by special legal characteristics, the improper use of tax treaties may be avoided by denying the tax treaty benefits to these companies (the exclusion approach). As such privileges are granted mostly to specific types of companies as defined in the commercial law or in the tax law of a country, the most radical solution would be to exclude such companies from the scope of the treaty. Another solution would be to insert a safeguarding clause which would apply to the income received or paid by such companies and which could be drafted along the following lines:

"No provision of the Convention conferring an exemption from, or reduction of, tax shall apply to income received or paid by a company as defined under section ... of the ... Act, or under any similar provision enacted by ... after the signature of the Convention."

The scope of this provision could be limited by referring only to specific types of income, such as dividends, interest, capital gains, or directors' fees. Under such provisions companies of the type concerned would remain entitled to the protection offered under Article 24 (non-discrimination) and to the benefits of Article 25 (mutual agreement procedure) and they would be subject to the provisions of Article 26 (exchange of information).

21.1 Exclusion provisions are clear and their application is simple, even though they may require administrative assistance in some instances. They are an important instrument by which a State that has created special privileges in its tax law may prevent those privileges from being used in connection with the improper use of tax treaties concluded by that State.

21.2 Where it is not possible or appropriate to identify the companies enjoying tax privileges by reference to their special legal characteristics, a more general formulation will be necessary. The following provision aims at denying the benefits of the Convention to entities which would otherwise qualify as residents of a Contracting State but which enjoy, in that State, a preferential tax regime restricted to foreign-held entities (i.e. not available to entities that belong to residents of that State):

"Any company, trust or partnership that is a resident of a Contracting State and is beneficially owned or controlled directly or indirectly by one or more persons who are not residents of that State shall not be entitled to the benefits of this Convention if the amount of the tax imposed on the income or capital of the company, trust or partnership by that State (after taking into account any reduction or offset of the amount of tax in any manner, including a refund, reimbursement, contribution, credit or allowance to the company, trust or partnership, or to any other person) is substantially lower than the amount that would be imposed by that State if all of the shares of the capital stock of the company or all of the interests in the trust or partnership, as the case may be, were beneficially owned by one or more residents of that State."

*Provisions which are aimed at particular types of income*

21.3 The following provision aims at denying the benefits of the Convention with respect to income that is subject to low or no tax under a preferential tax regime:

"1. The benefits of this Convention shall not apply to income which may, in accordance with the other provisions of the Convention, be taxed in a Contracting State and which is derived from activities the performance of which do not require substantial presence in that State, including:

- a) such activities involving banking, shipping, financing, insurance or electronic commerce activities; or
- b) activities involving headquarter or coordination centre or similar arrangements providing company or group administration, financing or other support; or
- c) activities which give rise to passive income, such as dividends, interest and royalties

where, under the laws or administrative practices of that State, such income is preferentially taxed and, in relation thereto, information is accorded confidential treatment that prevents the effective exchange of information.

2. For the purposes of paragraph 1, income is preferentially taxed in a Contracting State if, other than by reason of the preceding Articles of this Agreement, an item of income:

- a) is exempt from tax; or
- b) is taxable in the hands of a taxpayer but that is subject to a rate of tax that is lower than the rate applicable to an equivalent item that is taxable in the hands of similar taxpayers who are residents of that State; or
- c) benefits from a credit, rebate or other concession or benefit that is provided directly or indirectly in relation to that item of income, other than a credit for foreign tax paid."

*Anti-abuse rules dealing with source taxation of specific types of income*

21.4 The following provision has the effect of denying the benefits of specific Articles of the convention that restrict source taxation where transactions have been entered into for the main purpose of obtaining these benefits. The Articles concerned are 10, 11, 12 and 21; the provision should be slightly modified as indicated below to deal with the specific type of income covered by each of these Articles:

"The provisions of this Article shall not apply if it was the main purpose or one of the main purposes of any person concerned with the creation or assignment of the [Article 10: "shares or other rights"; Article 11: "debt-claim"; Articles 12 and 21: "rights"] in

respect of which the [Article 10: "dividend"; Article 11: "interest"; Articles 12 "royalties" and Article 21: "income"] is paid to take advantage of this Article by means of that creation or assignment."

*Provisions which are aimed at preferential regimes introduced after the signature of the convention*

21.5 States may wish to prevent abuses of their conventions involving provisions introduced by a Contracting State after the signature of the Convention. The following provision aims to protect a Contracting State from having to give treaty benefits with respect to income benefiting from a special regime for certain offshore income introduced after the signature of the treaty:

"The benefits of Articles 6 to 22 of this Convention shall not accrue to persons entitled to any special tax benefit under:

- a) a law of either one of the States which has been identified in an exchange of notes between the States; or
- b) any substantially similar law subsequently enacted."

22. Other forms of abuse of tax treaties (e.g. the use of a base company) and possible ways to deal with them, including "substance-over-form", "economic substance" and general anti-abuse rules have also been analysed, particularly as concerns the question of whether these rules conflict with tax treaties, which is the second question mentioned in paragraph 9.1 above.

22.1 Such rules are part of the basic domestic rules set by domestic tax laws for determining which facts give rise to a tax liability; these rules are not addressed in tax treaties and are therefore not affected by them. Thus, as a general rule and having regard to paragraph 9.5, there will be no conflict. For example, to the extent that the application of the rules referred to in paragraph 22 results in a recharacterisation of income or in a redetermination of the taxpayer who is considered to derive such income, the provisions of the Convention will be applied taking into account these changes.

22.2 Whilst these rules do not conflict with tax conventions, there is agreement that Member countries should carefully observe the specific obligations enshrined in tax treaties to relieve double taxation as long as there is no clear evidence that the treaties are being abused.

23. The use of base companies may also be addressed through controlled foreign companies provisions. A significant number of Member and non-member countries have now adopted such legislation. Whilst the design of this type of legislation varies considerably among countries, a common feature of these rules, which are now internationally recognised as a legitimate instrument to protect the domestic tax base, is that they result in a Contracting State taxing its residents on income attributable to their participation in certain foreign entities. It has sometimes been argued, based on a certain interpretation of provisions of the Convention such as paragraph 1 of Article 7 and paragraph 5 of Article 10, that this common feature of controlled foreign companies legislation conflicted with these provisions. For the reasons explained in paragraphs 10.1 of the Commentary on Article 7 and 37 of the Commentary on Article 10, that interpretation does not accord with the text of the provisions. It also does not hold when these provisions are read in their context. Thus, whilst some countries have felt it useful to expressly clarify, in their conventions, that controlled foreign companies legislation did not conflict with the Convention, such clarification is not necessary. It is recognised that controlled foreign companies legislation structured in this way is not contrary to the provisions of the Convention.

24-25. [Deleted]

26. States that adopt controlled foreign companies provisions or the anti-abuse rules referred to above in their domestic tax laws seek to maintain the equity and neutrality of these laws in an international environment characterised by very different tax burdens, but such measures should be used only for this purpose. As a general rule, these measures should not be applied where the relevant income has been subjected to taxation that is comparable to that in the country of residence of the taxpayer.

### **Remittance based taxation**

26.1 Under the domestic law of some States, persons who qualify as residents but who do not have what is considered to be a permanent link with the State (sometimes referred to as domicile) are only taxed on income derived from sources outside the State to the extent that this income is effectively repatriated, or remitted, thereto. Such persons are not, therefore, subject to potential double taxation to the extent that foreign income is not remitted to their State of residence and it may be considered inappropriate to give them the benefit of the provisions of the Convention on such income. Contracting States which agree to restrict the application of the provisions of the Convention to income that is effectively taxed in the hands of these persons may do so by adding the following provision to the Convention:

"Where under any provision of this Convention income arising in a Contracting State is relieved in whole or in part from tax in that State and under the law in force in the other Contracting State a person, in respect of the said income, is subject to tax by reference to the amount thereof which is remitted to or received in that other State and not by reference to the full amount thereof, then any relief provided by the provisions of this Convention shall apply only to so much of the income as is taxed in the other Contracting State."

In some States, the application of that provision could create administrative difficulties if a substantial amount of time elapsed between the time the income arose in a Contracting State and the time it were taxed by the other Contracting State in the hands of a resident of that other State. States concerned by these difficulties could subject the rule in the last part of the above provision, i.e. that the income in question will be entitled to benefits in the first-mentioned State only when taxed in the other State, to the condition that the income must be so taxed in that other State within a specified period of time from the time the income arises in the first-mentioned State.

### Limitations of source taxation: procedural aspects

26.2 A number of Articles of the Convention limit the right of a State to tax income derived from its territory. As noted in paragraph 19 of the Commentary on Article 10 as concerns the taxation of dividends, the Convention does not settle procedural questions and each State is free to use the procedure provided in its domestic law in order to apply the limits provided by the Convention. A State can therefore automatically limit the tax that it levies in accordance with the relevant provisions of the Convention, subject to possible prior verification of treaty entitlement, or it can impose the tax provided for under its domestic law and subsequently refund the part of that tax that exceeds the amount that it can levy under the provisions of the Convention. As a general rule, in order to ensure expeditious implementation of taxpayers' benefits under a treaty, the first approach is the highly preferable method. If a refund system is needed, it should be based on observable difficulties in identifying entitlement to treaty benefits. Also, where the second approach is adopted, it is extremely important that the refund be made expeditiously, especially if no interest is paid on the amount of the refund, as any undue delay in making that refund is a direct cost to the taxpayer.

### Observations on the Commentary

27. [Deleted]

27.1 The *Netherlands* will adhere to the conclusions on the application of the Convention to partnerships incorporated in the Commentary on Article 1 and in the Commentaries on the other relevant provisions of the Convention only, and to the extent to which, it is explicitly so confirmed in a specific tax treaty, as a result of mutual agreement between competent authorities as meant in Article 25 of the Convention or as unilateral policy.

27.2 *France* has expressed a number of reservations on the report on "The Application of the OECD Model Tax Convention to Partnerships". In particular, France does not agree with the interpretation put forward in paragraph 5 and 6 above according to which if a partnership is denied the benefits of a tax convention, its members are entitled to the benefits of the tax conventions entered into by their State of residence. France believes that this result is only possible, to a certain extent, if provisions to that effect are included in the convention entered into with the State where the partnership is situated. This view is also shared by *Mexico*.

27.3 *Portugal*, where all partnerships are taxed as such, has expressed a number of reservations on the report on "The Application of the OECD Model Tax Convention to Partnerships" and considers that the solutions put forward in that report should be incorporated in special provisions only applicable when included in tax conventions. This is the case, for example, of the treatment of the situation of partners of partnerships - a concept which is considerably fluid given the differences between States - that are fiscally transparent, including the situation where a third State is inserted between the State of source and the State of residence of the partners. The administrative difficulties resulting from some of the solutions put forward should also be noted, as indicated in the report itself in certain cases.

27.4 *Belgium* cannot share the views expressed in paragraph 23 of the Commentary. Belgium considers that the application of controlled foreign companies legislation is contrary to the provisions of paragraph 7 of Article 5, paragraph 1 of Article 7 and paragraph 5 of Article 10 of the Convention. This is especially the case where a Contracting State taxes one of its residents on income derived by a foreign entity by using a fiction attributing to that resident, in proportion to his participation in the capital of the foreign entity, the income derived by that entity. By doing so, that State increases the tax base of its resident by including in it income which has not been derived by that resident but by a foreign entity which is not taxable in that State in accordance with the Convention. That Contracting State thus disregards the legal personality of the foreign entity and therefore acts contrary to the Convention (see also paragraph 40.1 of the Commentary on Article 7 and paragraph 68.1 of the Commentary on Article 10).

27.5 Concerning potential conflicts between anti-abuse provisions (including controlled foreign company - CFC - provisions) in domestic law and the provisions of tax treaties, *Ireland* considers that it is not possible to have a simple general conclusion that no conflict will exist or that any conflict must be resolved in favour of the domestic law. This will depend on the nature of the domestic law provision and also on the legal and constitutional relationship in individual member countries between domestic law and international agreements and law. Also, Ireland does not agree with the deletion of the language in paragraph 26 (as it read until 2002), which stated: "It would be contrary to the general principles underlying the Model Convention and to the spirit of tax treaties in general if counteracting measures were to be extended to activities such as production, normal rendering of services or trading of companies engaged in real industrial or commercial activity, when they are clearly related to the economic environment of the country where they are resident in a situation where these activities are carried out in such a way that no tax avoidance could be suspected".

27.6 *Luxembourg* does not share the interpretation in paragraphs 9.2, 22.1 and 23 which provide that there is generally no conflict between anti-abuse provisions of the domestic law of a Contracting State and the provisions of its tax conventions. Absent an express provision in the Convention, Luxembourg therefore believes that a State can only apply its domestic anti-abuse provisions in specific cases after recourse to the mutual agreement procedure.

27.7 The *Netherlands* does not adhere to the statements in the Commentaries that as a general rule domestic anti-avoidance rules and controlled foreign companies provisions do not conflict with the provisions of tax conventions. The compatibility of such rules and provisions with tax treaties is, among other things, dependent on the nature and wording of the specific provision, the wording and purpose of the relevant treaty provision and the relationship between domestic and international law in a country. Since tax conventions are not meant to facilitate the improper use thereof, the application of national

rules and provisions may be justified in specific cases of abuse or clearly unintended use. In such situations the application of domestic measures has to respect the principle of proportionality and should not go beyond what is necessary to prevent the abuse or the clearly unintended use.

27.8 Whenever the prevailing hierarchy of tax conventions regarding internal law is not respected, *Portugal* will not adhere to the conclusions on the clarification of domestic anti-abuse rules incorporated in the Commentary on Article 1.

27.9 *Switzerland* does not share the view expressed in paragraph 7 according to which the purpose of double taxation conventions is to prevent tax avoidance and evasion. Also, this view seems to contradict the footnote to the Title of the Model Tax Convention. With respect to paragraph 22.1, *Switzerland* believes that domestic tax rules on abuse of tax conventions must conform to the general provisions of tax conventions, especially where the convention itself includes provisions intended to prevent its abuse. With respect to paragraph 23, *Switzerland* considers that controlled foreign corporation legislation may, depending on the relevant concept, be contrary to the spirit of Article 7.

### Reservation on the Article

28. The *United States* reserves the right, with certain exceptions, to tax its citizens and residents, including certain former citizens and long-term residents, without regard to the Convention.

## COMMENTARY ON ARTICLE 2

### CONCERNING TAXES COVERED BY THE CONVENTION

1. This Article is intended to make the terminology and nomenclature relating to the taxes covered by the Convention more acceptable and precise, to ensure identification of the Contracting States' taxes covered by the Convention, to widen as much as possible the field of application of the Convention by including, as far as possible, and in harmony with the domestic laws of the Contracting States, the taxes imposed by their political subdivisions or local authorities, to avoid the necessity of concluding a new convention whenever the Contracting States' domestic laws are modified, and to ensure for each Contracting State notification of significant changes in the taxation laws of the other State.

#### Paragraph 1

2. This paragraph defines the scope of application of the Convention: taxes on income and on capital; the term "direct taxes" which is far too imprecise has therefore been avoided. It is immaterial on behalf of which authorities such taxes are imposed; it may be the State itself or its political subdivisions or local authorities (constituent States, regions, provinces, *départements*, cantons, districts, *arrondissements*, *Kreise*, municipalities or groups of municipalities, etc.). The method of levying the taxes is equally immaterial: by direct assessment or by deduction at the source, in the form of surtaxes or surcharges, or as additional taxes (*centimes additionnels*), etc.

#### Paragraph 2

3. This paragraph gives a definition of taxes on income and on capital. Such taxes comprise taxes on total income and on elements of income, on total capital and on elements of capital. They also include taxes on profits and gains derived from the alienation of movable or immovable property, as well as taxes on capital appreciation. Finally, the definition extends to taxes on the total amounts of wages or salaries paid by undertakings ("payroll taxes"; in Germany, "*Lohnsummensteuer*"; in France, "*taxe sur les salaires*"). Social security charges, or any other charges paid where there is a direct connection between the levy and the individual benefits to be received, shall not be regarded as "taxes on the total amount of wages".

4. Clearly a State possessing taxing powers - and it alone - may levy the taxes imposed by its legislation together with any duties or charges accessory to them: increases, costs, interest, etc. It has not been considered necessary to specify this in the Article, as it is obvious that in the levying of the tax the accessory duties or charges depend on the same rule as the principal duty. Practice among Member countries varies with respect to the treatment of interest and penalties. Some countries never treat such items as taxes covered by the Article. Others take the opposite approach, especially in cases where the additional charge is computed with reference to the amount of the underlying tax. Countries are free to clarify this point in their bilateral negotiations.

5. The Article does not mention "ordinary taxes" or "extraordinary taxes". Normally, it might be considered justifiable to include extraordinary taxes in a model convention, but experience has shown that such taxes are generally imposed in very special circumstances. In addition, it would be difficult to define them. They may be extraordinary for various reasons; their imposition, the manner in which they are levied, their rates, their objects, etc. This being so, it seems preferable not to include extraordinary taxes in the Article. But, as it is not intended to exclude extraordinary taxes from all conventions, ordinary taxes have not been mentioned either. The Contracting States are thus free to restrict the convention's field of application to ordinary taxes, to extend it to extraordinary taxes, or even to establish special provisions.

#### Paragraph 3

6. This paragraph lists the taxes in force at the time of signature of the Convention. The list is not exhaustive. It serves to illustrate the preceding paragraphs of the Article. In principle, however, it will be a complete list of taxes imposed in each State at the time of signature and covered by the Convention.

16. The *Czech Republic*, *Finland*, *Hungary*, *Mexico*, *Norway*, and *Switzerland* reserve the right not to insert paragraph 2 in their conventions. The Czech Republic, however, is prepared in the course of negotiations to accept this paragraph and at the same time to add a third paragraph limiting the potential corresponding adjustment to bona fide cases.

17. With respect to paragraph 2, *Belgium*, *France*, *Hungary*, *Poland* and *Portugal* reserve the right to specify in their conventions that they will proceed to a correlative adjustment if they consider this adjustment to be justified.

18. *Australia* reserves the right to propose a provision to the effect that, if the information available to the competent authority of a Contracting State is inadequate to determine the profits to be attributed to an enterprise, the competent authority may apply to that enterprise for that purpose the provisions of the taxation law of that State, subject to the qualification that such law will be applied, as far as the information available to the competent authority permits, in accordance with the principles of this Article.

19. *Canada* reserves the right not to insert paragraph 2 in its conventions unless the commitment to make an adjustment is subject to certain time limitations and does not apply in the case of fraud, wilful default or neglect.

## COMMENTARY ON ARTICLE 10

### CONCERNING THE TAXATION OF DIVIDENDS

#### I. Preliminary remarks

1. By "dividends" is generally meant the distribution of profits to the shareholders by companies limited by shares,<sup>[1]</sup> limited partnerships with share capital,<sup>[2]</sup> limited liability companies<sup>[3]</sup> or other joint stock companies.<sup>[4]</sup> Under the laws of the OECD Member countries, such joint stock companies are legal entities with a separate juridical personality distinct from all their shareholders. On this point, they differ from partnerships insofar as the latter do not have juridical personality in most countries.

2. The profits of a business carried on by a partnership are the partners' profits derived from their own exertions; for them they are business profits. So the partner is ordinarily taxed personally on his share of the partnership capital and partnership profits.

3. The position is different for the shareholder; he is not a trader and the company's profits are not his; so they cannot be attributed to him. He is personally taxable only on those profits which are distributed by the company (apart from the provisions in certain countries' laws relating to the taxation of undistributed profits in special cases). From the shareholders' standpoint, dividends are income from the capital which they have made available to the company as its shareholders.

#### II. Commentary on the provisions of the Article

##### Paragraph 1

4. Paragraph 1 does not prescribe the principle of taxation of dividends either exclusively in the State of the beneficiary's residence or exclusively in the State of which the company paying the dividends is a resident.

5. Taxation of dividends exclusively in the State of source is not acceptable as a general rule. Furthermore, there are some States which do not have taxation of dividends at the source, while as a general rule, all the States tax residents in respect of dividends they receive from non-resident companies.

6. On the other hand, taxation of dividends exclusively in the State of the beneficiary's residence is not feasible as a general rule. It would be more in keeping with the nature of dividends, which are investment income, but it would be unrealistic to suppose that there is any prospect of it being agreed that all taxation of dividends at the source should be relinquished.

7. For this reason, paragraph 1 states simply that dividends may be taxed in the State of the beneficiary's residence. The term "paid" has a very wide meaning, since the concept of payment means the fulfilment of the obligation to put funds at the disposal of the shareholder in the manner required by contract or by custom.

8. The Article deals only with dividends paid by a company which is a resident of a Contracting State to a resident of the other Contracting State. It does not, therefore, apply to dividends paid by a company which is a resident of a third State or to dividends paid by a company which is a resident of a Contracting State which are attributable to a permanent establishment which an enterprise of that State has in the other Contracting State (for these cases, cf. paragraphs 4 to 6 of the Commentary on Article 21).

##### Paragraph 2

9. Paragraph 2 reserves a right to tax to the State of source of the dividends, i.e. to the State of which the company paying the dividends is a resident; this right to tax, however, is limited considerably. The rate of tax is limited to 15 per cent, which appears to be a reasonable maximum figure. A higher rate could hardly be justified since the State of source can already tax the company's profits.

<sup>1</sup> "Sociétés anonymes".

<sup>2</sup> "Sociétés en commandite par actions".

<sup>3</sup> "Sociétés à responsabilité limitée".

<sup>4</sup> "Sociétés de capitaux".

10. On the other hand, a lower rate (5 per cent) is expressly provided in respect of dividends paid by a subsidiary company to its parent company. If a company of one of the States owns directly a holding of at least 25 per cent in a company of the other State, it is reasonable that payments of profits by the subsidiary to the foreign parent company should be taxed less heavily to avoid recurrent taxation and to facilitate international investment. The realisation of this intention depends on the fiscal treatment of the dividends in the State of which the parent company is a resident (cf. paragraphs 49 to 54 of the Commentary on Articles 23 A and 23 B).

11. If a partnership is treated as a body corporate under the domestic laws applying to it, the two Contracting States may agree to modify subparagraph a) of paragraph 2 in a way to give the benefits of the reduced rate provided for parent companies also to such partnership.

12. The requirement of beneficial ownership was introduced in paragraph 2 of Article 10 to clarify the meaning of the words "paid ... to a resident" as they are used in paragraph 1 of the Article. It makes plain that the State of source is not obliged to give up taxing rights over dividend income merely because that income was immediately received by a resident of a State with which the State of source had concluded a convention. The term "beneficial owner" is not used in a narrow technical sense, rather, it should be understood in its context and in light of the object and purposes of the Convention, including avoiding double taxation and the prevention of fiscal evasion and avoidance.

12.1 Where an item of income is received by a resident of a Contracting State acting in the capacity of agent or nominee it would be inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption merely on account of the status of the immediate recipient of the income as a resident of the other Contracting State. The immediate recipient of the income in this situation qualifies as a resident but no potential double taxation arises as a consequence of that status since the recipient is not treated as the owner of the income for tax purposes in the State of residence. It would be equally inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption where a resident of a Contracting State, otherwise than through an agency or nominee relationship, simply acts as a conduit for another person who in fact receives the benefit of the income concerned. For these reasons, the report from the Committee on Fiscal Affairs entitled "Double Taxation Conventions and the Use of Conduit Companies"<sup>5</sup> concludes that a conduit company cannot normally be regarded as the beneficial owner if, though the formal owner, it has, as a practical matter, very narrow powers which render it, in relation to the income concerned, a mere fiduciary or administrator acting on account of the interested parties.

12.2 Subject to other conditions imposed by the Article, the limitation of tax in the State of source remains available when an intermediary, such as an agent or nominee located in a Contracting State or in a third State, is interposed between the beneficiary and the payer but the beneficial owner is a resident of the other Contracting State (the text of the Model was amended in 1995 to clarify this point, which has been the consistent position of all Member countries). States which wish to make this more explicit are free to do so during bilateral negotiations.

13. The tax rates fixed by the Article for the tax in the State of source are maximum rates. The States may agree, in bilateral negotiations, on lower rates or even on taxation exclusively in the State of the beneficiary's residence. The reduction of rates provided for in paragraph 2 refers solely to the taxation of dividends and not to the taxation of the profits of the company paying the dividends.

14. The two Contracting States may also, during bilateral negotiations, agree to a holding percentage lower than that fixed in the Article. A lower percentage is, for instance, justified in cases where the State of residence of the parent company, in accordance with its domestic law, grants exemption to such a company for dividends derived from a holding of less than 25 per cent in a non-resident subsidiary.

15. In subparagraph a) of paragraph 2, the term "capital" is used in relation to the taxation treatment of dividends, i.e. distributions of profits to shareholders. The use of this term in this context implies that, for the purposes of subparagraph a), it should be used in the sense in which it is used for the purposes of distribution to the shareholder (in the particular case, the parent company).

- a) As a general rule, therefore, the term "capital" in subparagraph a) should be understood as it is understood in company law. Other elements, in particular the reserves, are not to be taken into account.
- b) Capital, as understood in company law, should be indicated in terms of par value of all shares which in the majority of cases will be shown as capital in the company's balance sheet.
- c) No account need be taken of differences due to the different classes of shares issued (ordinary shares, preference shares, plural voting shares, non-voting shares, bearer shares, registered shares, etc.), as such differences relate more to the nature of the shareholder's right than to the extent of his ownership of the capital.
- d) When a loan or other contribution to the company does not, strictly speaking, come as capital under company law but when on the basis of internal law or practice ("thin capitalisation", or assimilation of a loan to share capital), the income derived in respect thereof is treated as dividend under Article 10, the value of such loan or contribution is also to be taken as "capital" within the meaning of subparagraph a).

<sup>5</sup> Reproduced at page R(6)-1 of Volume II of the loose-leaf version of the OECD Model Tax Convention.

- e) In the case of bodies which do not have a capital within the meaning of company law, capital for the purpose of subparagraph a) is to be taken as meaning the total of all contributions to the body which are taken into account for the purpose of distributing profits.

In bilateral negotiations, Contracting States may depart from the criterion of "capital" used in subparagraph a) of paragraph 2 and use instead the criterion of "voting power".

16. Subparagraph a) of paragraph 2 does not require that the company receiving the dividends must have owned at least 25 per cent of the capital for a relatively long time before the date of the distribution. This means that all that counts regarding the holding is the situation prevailing at the time material for the coming into existence of the liability to the tax to which paragraph 2 applies, i.e. in most cases the situation existing at the time when the dividends become legally available to the shareholders. The primary reason for this resides in the desire to have a provision which is applicable as broadly as possible. To require the parent company to have possessed the minimum holding for a certain time before the distribution of the profits could involve extensive inquiries. Internal laws of certain OECD Member countries provide for a minimum period during which the recipient company must have held the shares to qualify for exemption or relief in respect of dividends received. In view of this, Contracting States may include a similar condition in their conventions.

17. The reduction envisaged in subparagraph a) of paragraph 2 should not be granted in cases of abuse of this provision, for example, where a company with a holding of less than 25 per cent has, shortly before the dividends become payable, increased its holding primarily for the purpose of securing the benefits of the above-mentioned provision, or otherwise, where the qualifying holding was arranged primarily in order to obtain the reduction. To counteract such manoeuvres Contracting States may find it appropriate to add to subparagraph a) a provision along the following lines:

"provided that this holding was not acquired primarily for the purpose of taking advantage of this provision".

18. Paragraph 2 lays down nothing about the mode of taxation in the State of source. It therefore leaves that State free to apply its own laws and, in particular, to levy the tax either by deduction at source or by individual assessment.

19. The paragraph does not settle procedural questions. Each State should be able to use the procedure provided in its own laws. It can either forthwith limit its tax to the rates given in the Article or tax in full and make a refund (see, however, paragraph 26.2 of the Commentary on Article 1). Specific questions arise with triangular cases (see paragraph 53 of the Commentary on Article 24).

20. It does not specify whether or not the relief in the State of source should be conditional upon the dividends being subject to tax in the State of residence. This question can be settled by bilateral negotiations.

21. The Article contains no provisions as to how the State of the beneficiary's residence should make allowance for the taxation in the State of source of the dividends. This question is dealt with in Articles 23 A and 23 B.

22. Attention is drawn generally to the following case: the beneficial owner of the dividends arising in a Contracting State is a company resident of the other Contracting State; all or part of its capital is held by shareholders resident outside that other State; its practice is not to distribute its profits in the form of dividends; and it enjoys preferential taxation treatment (private investment company, base company). The question may arise whether in the case of such a company it is justifiable to allow in the State of source of the dividends the limitation of tax which is provided in paragraph 2. It may be appropriate, when bilateral negotiations are being conducted, to agree upon special exceptions to the taxing rule laid down in this Article, in order to define the treatment applicable to such companies.

### *Paragraph 3*

23. In view of the great differences between the laws of OECD Member countries, it is impossible to define "dividends" fully and exhaustively. Consequently, the definition merely mentions examples which are to be found in the majority of the Member countries' laws and which, in any case, are not treated differently in them. The enumeration is followed up by a general formula. In the course of the revision of the 1963 Draft Convention, a thorough study has been undertaken to find a solution that does not refer to domestic laws. This study has led to the conclusion that, in view of the still remaining dissimilarities between Member countries in the field of company law and taxation law, it did not appear to be possible to work out a definition of the concept of dividends that would be independent of domestic laws. It is open to the Contracting States, through bilateral negotiations, to make allowance for peculiarities of their laws and to agree to bring under the definition of "dividends" other payments by companies falling under the Article.

24. The notion of dividends basically concerns distributions by companies within the meaning of subparagraph b) of paragraph 1 of Article 3. Therefore the definition relates, in the first instance, to distributions of profits the title to which is constituted by shares, that is holdings in a company limited by shares (joint stock company). The definition assimilates to shares all securities issued by companies which carry a right to participate in the companies' profits without being debt-claims; such are, for example, "jouissance" shares or "jouissance" rights, founders' shares or other rights participating in profits. In bilateral conventions, of course, this enumeration may be adapted to the legal situation in the Contracting States concerned. This may be necessary in particular, as regards income from "jouissance" shares and founders' shares. On the other hand, debt-claims participating in profits do not come into this category; (cf. paragraph 19 of the Commentary on Article 11); likewise interest on convertible debentures is not a dividend.

25. Article 10 deals not only with dividends as such but also with interest on loans insofar as the lender effectively shares the risks run by the company, i.e. when repayment depends largely on the success or otherwise of the enterprise's business.

Articles 10 and 11 do not therefore prevent the treatment of this type of interest as dividends under the national rules on thin capitalisation applied in the borrower's country. The question whether the contributor of the loan shares the risks run by the enterprise must be determined in each individual case in the light of all the circumstances, as for example the following:

- the loan very heavily outweighs any other contribution to the enterprise's capital (or was taken out to replace a substantial proportion of capital which has been lost) and is substantially unmatched by redeemable assets;
- the creditor will share in any profits of the company;
- repayment of the loan is subordinated to claims of other creditors or to the payment of dividends;
- the level or payment of interest would depend on the profits of the company;
- the loan contract contains no fixed provisions for repayment by a definite date.

26. The laws of many of the States put participations in a *société à responsabilité limitée* (limited liability company) on the same footing as shares. Likewise, distributions of profits by co-operative societies are generally regarded as dividends.

27. Distributions of profits by partnerships are not dividends within the meaning of the definition, unless the partnerships are subject, in the State where their place of effective management is situated, to a fiscal treatment substantially similar to that applied to companies limited by shares (for instance, in Belgium, Portugal and Spain, also in France as regards distributions to *commanditaires* in the *sociétés en commandite simple*). On the other hand, clarification in bilateral conventions may be necessary in cases where the taxation law of a Contracting State gives the owner of holdings in a company a right to opt, under certain conditions, for being taxed as a partner of a partnership, or, vice versa, gives the partner of a partnership the right to opt for taxation as the owner of holdings in a company.

28. Payments regarded as dividends may include not only distributions of profits decided by annual general meetings of shareholders, but also other benefits in money or money's worth, such as bonus shares, bonuses, profits on a liquidation and disguised distributions of profits. The reliefs provided in the Article apply so long as the State of which the paying company is a resident taxes such benefits as dividends. It is immaterial whether any such benefits are paid out of current profits made by the company or are derived, for example, from reserves, i.e. profits of previous financial years. Normally, distributions by a company which have the effect of reducing the membership rights, for instance, payments constituting a reimbursement of capital in any form whatever, are not regarded as dividends.

29. The benefits to which a holding in a company confer entitlement are, as a general rule, available solely to the shareholders themselves. Should, however, certain of such benefits be made available to persons who are not shareholders within the meaning of company law, they may constitute dividends if:

- the legal relations between such persons and the company are assimilated to a holding in a company ("concealed holdings") and
- the persons receiving such benefits are closely connected with a shareholder; this is the case, for example, where the recipient is a relative of the shareholder or is a company belonging to the same group as the company owning the shares.

30. When the shareholder and the person receiving such benefits are residents of two different States with which the State of source has concluded conventions, differences of views may arise as to which of these conventions is applicable. A similar problem may arise when the State of source has concluded a convention with one of the States but not with the other. This, however, is a conflict which may affect other types of income, and the solution to it can be found only through an arrangement under the mutual agreement procedure.

#### Paragraph 4

31. Certain States consider that dividends, interest and royalties arising from sources in their territory and payable to individuals or legal persons who are residents of other States fall outside the scope of the arrangement made to prevent them from being taxed both in the State of source and in the State of the beneficiary's residence when the beneficiary has a permanent establishment in the former State. Paragraph 4 is not based on such a conception which is sometimes referred to as "the force of attraction of the permanent establishment". It does not stipulate that dividends flowing to a resident of a Contracting State from a source situated in the other State must, by a kind of legal presumption, or fiction even, be related to a permanent establishment which that resident may have in the latter State, so that the said State would not be obliged to limit its taxation in such a case. The paragraph merely provides that in the State of source the dividends are taxable as part of the profits of the permanent establishment there owned by the beneficiary which is a resident of the other State, if they are paid in respect of holdings forming part of the assets of the permanent establishment or otherwise effectively connected with that establishment. In that case, paragraph 4 relieves the State of source of the dividends from any limitations under the Article. The foregoing explanations accord with those in the Commentary on Article 7.

32. It has been suggested that the paragraph could give rise to abuses through the transfer of shares to permanent establishments set up solely for that purpose in countries that offer preferential treatment to dividend income. Apart from the fact that such abusive transactions might trigger the application of domestic anti-abuse rules, it must be recognised that a particular location can only constitute a permanent establishment if a business is carried on therein and, also, that the requirement that a shareholding be "effectively connected" to such a location requires that the shareholding be genuinely connected to that business.

### Paragraph 5

33. The Article deals only with dividends paid by a company which is a resident of a Contracting State to a resident of the other State. Certain States, however, tax not only dividends paid by companies resident therein but even distributions by non-resident companies of profits arising within their territory. Each State, of course, is entitled to tax profits arising in its territory which are made by non-resident companies, to the extent provided in the Convention (in particular in Article 7). The shareholders of such companies should not be taxed as well at any rate, unless they are residents of the State and so naturally subject to its fiscal sovereignty.

34. Paragraph 5 rules out the extra-territorial taxation of dividends, i.e. the practice by which States tax dividends distributed by a non-resident company solely because the corporate profits from which the distributions are made originated in their territory (for example, realised through a permanent establishment situated therein). There is, of course, no question of extra-territorial taxation when the country of source of the corporate profits taxes the dividends because they are paid to a shareholder who is a resident of that State or to a permanent establishment situated in that State.

35. Moreover, it can be argued that such a provision does not aim at, or cannot result in, preventing a State from subjecting the dividends to a withholding tax when distributed by foreign companies if they are cashed in its territory. Indeed, in such a case, the criterion for tax liability is the fact of the payment of the dividends, and not the origin of the corporate profits allotted for distribution. But if the person cashing the dividends in a Contracting State is a resident of the other Contracting State (of which the distributing company is a resident), he may under Article 21 obtain exemption from, or refund of, the withholding tax of the first-mentioned State. Similarly, if the beneficiary of the dividends is a resident of a third State which had concluded a double taxation convention with the State where the dividends are cashed, he may, under Article 21 of that convention, obtain exemption from, or refund of, the withholding tax of the last-mentioned State.

36. Paragraph 5 further provides that non-resident companies are not to be subjected to special taxes on undistributed profits.

37. It might be argued that where the taxpayer's country of residence, pursuant to its controlled foreign companies legislation or other rules with similar effect seeks to tax profits which have not been distributed, it is acting contrary to the provisions of paragraph 5. However, it should be noted that the paragraph is confined to taxation at source and, thus, has no bearing on the taxation at residence under such legislation or rules. In addition, the paragraph concerns only the taxation of the company and not that of the shareholder.

38. The application of such legislation or rules may, however, complicate the application of Article 23. If the income were attributed to the taxpayer then each item of the income would have to be treated under the relevant provisions of the Convention (business profits, interest, royalties). If the amount is treated as a deemed dividend then it is clearly derived from the base company thus constituting income from that company's country. Even then, it is by no means clear whether the taxable amount is to be regarded as a dividend within the meaning of Article 10 or as "other income" within the meaning of Article 21. Under some of these legislation or rules the taxable amount is treated as a dividend with the result that an exemption provided for by a tax convention, e.g. an affiliation exemption, is also extended to it. It is doubtful whether the Convention requires this to be done. If the country of residence considers that this is not the case it may face the allegation that it is obstructing the normal operation of the affiliation exemption by taxing the dividend (in the form of "deemed dividend") in advance.

39. Where dividends are actually distributed by the base company, the provisions of a bilateral convention regarding dividends have to be applied in the normal way because there is dividend income within the meaning of the convention. Thus, the country of the base company may subject the dividend to a withholding tax. The country of residence of the shareholder will apply the normal methods for the elimination of double taxation (i.e. tax credit or tax exemption is granted). This implies that the withholding tax on the dividend should be credited in the shareholder's country of residence, even if the distributed profit (the dividend) has been taxed years before under controlled foreign companies legislation or other rules with similar effect. However, the obligation to give credit in that case remains doubtful. Generally the dividend as such is exempted from tax (as it was already taxed under the relevant legislation or rules) and one might argue that there is no basis for a tax credit. On the other hand, the purpose of the treaty would be frustrated if the crediting of taxes could be avoided by simply anticipating the dividend taxation under counteracting legislation. The general principle set out above would suggest that the credit should be granted, though the details may depend on the technicalities of the relevant legislation or rules) and the system for crediting foreign taxes against domestic tax, as well as on the particularities of the case (e.g. time lapsed since the taxation of the "deemed dividend"). However, taxpayers who have recourse to artificial arrangements are taking risks against which they cannot fully be safeguarded by tax authorities.

### III. Effects of special features of the domestic tax laws of certain countries

40. Certain countries' laws seek to avoid or mitigate economic double taxation i.e. the simultaneous taxation of the company's profits at the level of the company and of the dividends at the level of the shareholder. There are various ways of achieving this:

- company tax in respect of distributed profits may be charged at a lower rate than that on retained profits;
- relief may be granted in computing the shareholder's personal tax;
- dividends may bear only one tax, the distributed profits not being taxed at the level of the company.

The Committee on Fiscal Affairs has examined the question whether the special features of the tax laws of the Member countries would justify solutions other than those contained in the Model Convention.

#### **A. Dividends distributed to individuals**

41. In contrast to the notion of juridical double taxation, which has, generally, a quite precise meaning, the concept of economic double taxation is less certain. Some States do not accept the validity of this concept and others, more numerous, do not consider it necessary to relieve economic double taxation at the national level (dividends distributed by resident companies to resident shareholders). Consequently, as the concept of economic double taxation was not sufficiently well defined to serve as a basis for the analysis, it seemed appropriate to study the problem from a more general economic standpoint, i.e. from the point of view of the effects which the various systems for alleviating such double taxation can have on the international flow of capital. For this purpose, it was necessary to see, among other things, what distortions and discriminations the various national systems could create; but it was necessary to have regard also to the implications for States' budgets and for effective fiscal verification, without losing sight of the principle of reciprocity that underlies every convention. In considering all these aspects, it became apparent that the burden represented by company tax could not be wholly left out of account.

##### *1. States with the classical system*

42. The Committee has recognised that economic double taxation need not be relieved at the international level when such double taxation remains unrelieved at the national level. It therefore considers that in relations between two States with the classical system, i.e. States which do not relieve economic double taxation, the respective levels of company tax in the Contracting States should have no influence on the rate of withholding tax on the dividend in the State of source (rate limited to 15 per cent by subparagraph *b*) of paragraph 2 of Article 10). Consequently, the solution recommended in the Model Convention remains fully applicable in the present case.

##### *2. States applying a split rate company tax*

43. These States levy company tax at different rates according to what the company does with its profits: the high rate is charged on any profits retained and the lower rate on those distributed.

44. None of these States, in negotiating double taxation conventions, has obtained, on the grounds of its split rate of company tax, the right to levy withholding tax of more than 15 per cent (cf. subparagraph *b*) of paragraph 2 of Article 10) on dividends paid by its companies to a shareholder who is an individual resident in the other State.

45. The Committee considered whether such a State (State B) should not be recognised as being entitled to levy withholding tax exceeding 15 per cent on dividends distributed by its companies to residents of a State with a classical system (State A), with the proviso that the excess over 15 per cent, which would be designed to offset, in relation to the shareholder concerned, the effects of the lower rate of company tax on distributed profits of companies of State B, would not be creditable against the tax payable by the shareholder in State A of which he is a resident.

46. Most Member countries considered that in State B regard should be had to the average level of company tax, and that such average level should be considered as the counterpart to the charge levied in the form of a single-rate tax on companies resident of State A. The levy by State B of an additional withholding tax not credited in State A would, moreover, create twofold discrimination: on the one hand, dividends, distributed by a company resident of State B would be more heavily taxed when distributed to residents of State A than when distributed to residents of State B, and, on the other hand, the resident of State A would pay higher personal tax on his dividends from State B than on his dividends from State A. The idea of a "balancing tax" was not, therefore, adopted by the Committee.

##### *3. States which provide relief at the shareholder's level*

47. In these States, the company is taxed on its total profits, whether distributed or not, and the dividends are taxed in the hands of the resident shareholder (an individual); the latter, however, is entitled to relief, usually as a tax credit against his personal tax, on the grounds that - in the normal course at least - the dividend has borne company tax as part of the company's profits.

48. Internal law of these States does not provide for the extension of the tax relief to the international field. Relief is allowed only to residents and only in respect of dividends of domestic sources. However, as indicated below, some States have, in some conventions, extended the right to the tax credit provided for in their legislation to residents of the other Contracting State.

49. In many States that provide relief at the shareholder's level, the resident shareholder receives a credit in recognition of the fact that the profits out of which the dividends are paid have already been taxed in the hands of the company. The resident shareholder is taxed on his dividend grossed up by the tax credit; this credit is set off against the tax payable and can possibly give rise to a refund. In some double taxation conventions, some countries that apply this system have agreed to extend the credit to shareholders who are residents of the other Contracting State. Whilst most States that have agreed to such extensions have done so on a reciprocal basis, a few countries have concluded conventions where they unilaterally extend the benefits of the credit to residents of the other Contracting State.

50. Some States that also provide relief at the shareholder's level claim that under their systems the company tax remains in its entirety a true company tax, in that it is charged by reference solely to the company's own situation, without any regard to the person and the residence of the shareholder, and in that, having been so charged, it remains appropriated to the Treasury. The

tax credit given to the shareholder is designed to relieve his personal tax liability and in no way constitutes an adjustment of the company's tax. No refund, therefore, is given if the tax credit exceeds that personal tax.

51. The Committee could not reach a general agreement on whether the systems of the States referred to in paragraph 50 above display a fundamental difference that could justify different solutions at the international level.

52. Some Member countries were of the opinion that such a fundamental difference does not exist. This opinion leaves room for the conclusion that the States referred to in paragraph 50 above should agree to extend the tax credit to non-resident shareholders, at least on a reciprocal basis, in the same way as some of the countries referred to in paragraph 49 above do. Such a solution tends to ensure neutrality as regards dividends distributed by companies of these countries, the same treatment being given to resident and non-resident shareholders. On the other hand, it would in relation to shareholders who are residents of a Contracting State (a State with a classical system in particular) encourage investment in a State that provides relief at the shareholder's level since residents of the first State would receive a tax credit (in fact a refund of company tax) for dividends from the other State while they do not receive one for dividends from their own country. However, these effects are similar to those which present themselves between a State applying a split rate company tax and a State with a classical system or between two States with a classical system one of which has a lower company tax rate than the other (paragraphs 42 and 43 to 46 above).

53. On the other hand, many Member countries stressed the fact that a determination of the true nature of the tax relief given under the systems of the States referred to in paragraph 50 above reveals a mere alleviation of the shareholder's personal income tax in recognition of the fact that his dividend will normally have borne company tax. The tax credit is given once and for all ( *forfaitaire* ) and is therefore not in exact relation to the actual company tax appropriate to the profits out of which the dividend is paid. There is no refund if the tax credit exceeds the personal income tax.

54. As the relief in essence is not a refund of company tax but an alleviation of the personal income tax, the extension of the relief to non-resident shareholders who are not subject to personal income tax in the countries concerned does not come into consideration. On the other hand, however, on this line of reasoning, the question whether States which provide relief at the shareholder's level should give relief against personal income tax levied from resident shareholders on foreign dividends deserves attention. In this respect it should be observed that the answer is in the affirmative if the question is looked at from the standpoint of neutrality as regards the source of the dividends; otherwise, residents of these States will be encouraged to acquire shares in their own country rather than abroad. But such an extension of the tax credit would be contrary to the principle of reciprocity: not only would the State concerned thereby be making a unilateral budgetary sacrifice (allowing the tax credit over and above the withholding tax levied in the other State), but it would do so without receiving any economic compensation, since it would not be encouraging residents of the other State to acquire shares in its own territory.

55. To overcome these objections, it might be a conceivable proposition, amongst other possibilities, that the State of source - which will have collected company tax on dividends distributed by resident companies - should bear the cost of the tax credit that a State which provides relief at the shareholder's level would allow, by transferring funds to that State. As, however, such transfers are hardly favoured by the States this might be more simply achieved by means of a "compositional" arrangement under which the State of source would relinquish all withholding tax on dividends paid to residents of the other State, and the latter would then allow against its own tax, not the 15 per cent withholding tax (abolished in the State of source) but a tax credit similar to that which it gives on dividends of domestic source.

56. When everything is fully considered, it seems that the problem can be solved only in bilateral negotiations, where one is better placed to evaluate the sacrifices and advantages which the Convention must bring for each Contracting State.

57-58. [Deleted]

## **B. Dividends distributed to companies**

59. Comments above relating to dividends paid to individuals are generally applicable to dividends paid to companies which hold less than 25 per cent of the capital of the company paying the dividends. Moreover, the Committee on Fiscal Affairs has not covered in the Commentary the special problem of dividends paid to collective investment institutions (investment companies or investment funds).

60. In respect of dividends paid to companies which hold at least 25 per cent of the capital of the company paying the dividends, the Committee has examined the incidence which the particular company taxation systems quoted in paragraphs 42 and following have on the tax treatment of dividends paid by the subsidiary.

61. Various opinions were expressed in the course of the discussion. Opinions diverge even when the discussion is limited to the taxation of subsidiaries and parent companies. They diverge still more if the discussion takes into account more general economic considerations and extends to the taxation of shareholders of the parent company.

62. In their bilateral conventions States have adopted different solutions, which were motivated by the economic objectives and the peculiarities of the legal situation of those States, by budgetary considerations, and by a whole series of other factors. Accordingly, no generally accepted principles have emerged. The Committee did nevertheless consider the situation for the more common systems of company taxation.

### **1. Classical system in the State of the subsidiary**

(paragraph 42 above)

63. The provisions of the Convention have been drafted to apply when the State of which the distributing company is a resident has a so-called "classical" system of company taxation, namely one under which distributed profits are not entitled to any benefit at the level either of the company or of the shareholder (except for the purpose of avoiding recurrent taxation of inter-company dividends).

#### 2. *Split-rate company tax system in the State of the subsidiary*

(paragraphs 43 to 46 above)

64. States of this kind collect company tax on distributed profits at a lower rate than on retained profits which results in a lower company tax burden on profits distributed by a subsidiary to its parent company. In view of this situation, most of these States have obtained, in their conventions, rates of tax at source of 10 or 15 per cent, and in some cases even above 15 per cent. It has not been possible in the Committee to get views to converge on this question, the solution of which is left to bilateral negotiations.

#### 3. *Imputation system in the State of the subsidiary*

(paragraphs 47 and following)

65. In such States, a company is liable to tax on the whole of its profits, whether distributed or not; the shareholders resident of the State of which the distributing company is itself a resident are subject to tax on dividends distributed to them, but receive a tax credit in consideration of the fact that the profits distributed have been taxed at company level.

66. The question has been considered whether States of this kind should extend the benefit of the tax credit to the shareholders of parent companies resident of another State, or even to grant the tax credit directly to such parent companies. It has not been possible in the Committee to get views to converge on this question, the solution of which is left to bilateral negotiations.

67. If, in such a system, profits, whether distributed or not, are taxed at the same rate, the system is not different from a "classical" one at the level of the distributing company. Consequently, the State of which the subsidiary is a resident can only levy a tax at source at the rate provided in subparagraph a) of paragraph 2.

#### **Observation on the Commentary**

68. *Canada* and the *United Kingdom* do not adhere to paragraph 24 above. Under their law, certain interest payments are treated as distributions, and are therefore included in the definition of dividends.

68.1 *Belgium* cannot share the views expressed in paragraph 37 of the Commentary. Belgium considers that paragraph 5 of Article 10 is a particular application of a general principle underlying various provisions of the Convention (paragraph 7 of Article 5, paragraph 1 of Article 7, and paragraphs 1 and 5 of Article 10), which is the prohibition for a contracting State, except in exceptional cases expressly provided for in the Convention, to levy a tax on the profits of a company which is a resident of the other contracting State. Paragraph 5, which deals with taxation where the income has its source, confirms this general prohibition and provides that the prohibition applies even where the undistributed profits derived by the entity that is a resident of the other contracting State arise from business carried out in the State of source. Paragraph 5 prohibits the taxation of the undistributed profits of the foreign entity even where the State where those profits arise taxes them in the hands of a resident shareholder.

68.2 With reference to paragraph 37, *Ireland* notes its general observation in paragraph 27.5 of the Commentary on Article 1.

#### **Reservations on the Article**

##### *Paragraph 2*

69. *New Zealand* reserves the right to tax, at a rate of 15 per cent, dividends paid by a company that is a resident of New Zealand for purposes of its tax.

70-71. [Deleted]

72. The *United States* reserves the right to provide that shareholders of certain pass-through entities, such as Regulated Investment Companies and Real Estate Investment Trusts, will not be granted the direct dividend investment rate, even if they would qualify based on their percentage ownership.

73. *Italy* reserves its position concerning the percentage envisaged for the holding (25 per cent) and can only agree to a rate of tax of 5 per cent for a direct holding of more than 50 per cent.

74. [Deleted]

75. *Portugal*, *Mexico* and *Turkey* reserve their positions on the rates of tax in paragraph 2.

76. *Spain* reserves its position on the rate of tax of 5 per cent and the determination of the minimum percentage for the holding.

77. *Poland* reserves its position on the minimum percentage for the holding (25 per cent) and the rates of tax (5 per cent and 15 per cent).

##### *Paragraph 3*

78. *Belgium* reserves the right to broaden the definition of dividends in paragraph 3 so as to cover expressly income-even when paid in the form of interest-which is subjected to the same taxation treatment as income from shares by its internal law.

79. *Denmark* reserves the right, in certain cases, to consider as dividends the selling price derived from the sale of shares.

80. *France* reserves the right to amplify the definition of dividends in paragraph 3 so as to cover all income subjected to the taxation treatment of distributions.

81. *Canada, Germany, Ireland and Spain* reserve the right to amplify the definition of dividends in paragraph 3 so as to cover certain interest payments which are treated as distributions under their domestic law.

81.1 *Portugal* reserves the right to amplify the definition of dividends in paragraph 3 so as to cover certain payments, made under profit participation arrangements, which are treated as distributions under its domestic law.

81.2 *Luxembourg* reserves the right to expand the definition of dividends in paragraph 3 in order to cover certain payments which are treated as distributions of dividends under its domestic law.

#### Paragraph 4

82. *Italy* reserves the right to subject dividends to the taxes imposed by its law whenever the recipient thereof has a permanent establishment in Italy, even if the holding on which the dividends are paid is not effectively connected with such permanent establishment.

#### Paragraph 5

83. *Canada* and the *United States* reserve the right to impose their branch tax on the earnings of a company attributable to a permanent establishment situated in these countries. *Canada* also reserves the right to impose this tax on profits attributable to the alienation of immovable property situated in *Canada* by a company carrying on a trade in immovable property.

84. [Deleted]

85. *Turkey* reserves the right to tax, in a manner corresponding to that provided by paragraph 2 of the Article, the part of the profits of a company of the other Contracting State that carries on business through a permanent establishment situated in *Turkey* that remains after taxation pursuant to Article 7.

## COMMENTARY ON ARTICLE 11

### CONCERNING THE TAXATION OF INTEREST

#### I. Preliminary remarks

1. "Interest" is generally taken to mean remuneration on money lent, being remuneration coming within the category of "income from movable capital" ( *revenus de capitaux mobiliers* ). Unlike dividends, interest does not suffer economic double taxation, that is, it is not taxed both in the hands of the debtor and in the hands of the creditor. Unless it is provided to the contrary by the contract, payment of the tax charged on interest falls on the recipient. If it happens that the debtor undertakes to bear any tax chargeable at the source, this is as though he had agreed to pay his creditor additional interest corresponding to such tax.

2. But, like dividends, interest on bonds or debentures or loans usually attracts tax charged by deduction at the source when the interest is paid. This method is, in fact, commonly used for practical reasons, as the tax charged at the source can constitute an advance of the tax payable by the recipient in respect of his total income or profits. If in such a case the recipient is a resident of the country which practises deduction at the source, any double taxation he suffers is remedied by internal measures. But the position is different if he is a resident of another country: he is then liable to be taxed twice on the interest, first by the State of source and then by the State of which he is a resident. It is clear that his double charge of tax can reduce considerably the interest on the money lent and so hamper the movement of capital and the development of international investment.

3. A formula reserving the exclusive taxation of interest to one State, whether the State of the beneficiary's residence or the State of source, could not be sure of receiving general approval. Therefore a compromise solution was adopted. It provides that interest may be taxed in the State of residence, but leaves to the State of source the right to impose a tax if its laws so provide, it being implicit in this right that the State of source is free to give up all taxation on interest paid to non-residents. Its exercise of this right will however be limited by a ceiling which its tax cannot exceed but, it goes without saying, the Contracting States can agree to adopt an even lower rate of taxation in the State of source. The sacrifice that the latter would accept in such conditions will be matched by a relief to be given by the State of residence, in order to take into account the tax levied in the State of source (cf. Article 23 A or 23 B).

4. Certain countries do not allow interest paid to be deducted for the purposes of the payer's tax unless the recipient also resides in the same State or is taxable in that State. Otherwise they forbid the deduction. The question whether the deduction should also be allowed in cases where the interest is paid by a resident of a Contracting State to a resident of the other State, is dealt with in paragraph 4 of Article 24.

ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT

## ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT

Pursuant to Article 1 of the Convention signed in Paris on 14th December 1960, and which came into force on 30th September 1961, the Organisation for Economic Co-operation and Development (OECD) shall promote policies designed:

- to achieve the highest sustainable economic growth and employment and a rising standard of living in member countries, while maintaining financial stability, and thus to contribute to the development of the world economy;
- to contribute to sound economic expansion in member as well as non-member countries in the process of economic development; and
- to contribute to the expansion of world trade on a multilateral, non-discriminatory basis in accordance with international obligations.

The original member countries of the OECD are Austria, Belgium, Canada, Denmark, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The following countries became members subsequently through accession at the dates indicated hereafter: Japan (28th April 1964), Finland (28th January 1969), Australia (7th June 1971), New Zealand (29th May 1973), Mexico (18th May 1994), the Czech Republic (21st December 1995), Hungary (7th May 1996), Poland (22nd November 1996), Korea (12th December 1996) and the Slovak Republic (14th December 2000). The Commission of the European Communities takes part in the work of the OECD (Article 13 of the OECD Convention).

***PART I***

**RESTRICTING THE ENTITLEMENT TO TREATY BENEFITS**

## **RESTRICTING THE ENTITLEMENT TO TREATY BENEFITS**

### **1. Introduction**

1. In April 1998, the Council of the OECD adopted the Report entitled “Harmful Tax Competition: an Emerging Global Issue” (the “1998 Report on harmful tax competition”). One of the issues for follow-up work identified in the Report was a possible restriction of the entitlement to treaty benefits.

2. This note is the result of the work done by the Committee on Fiscal Affairs on this issue.

### **2. Nature of the work done by the Committee**

3. Recommendation 9 of the 1998 Report on harmful tax competition read as follows:

“that countries consider including in their tax conventions provisions aimed at restricting the entitlement to treaty benefits for entities and income covered by measures constituting harmful tax practices and consider how the existing provisions of their tax conventions can be applied for the same purpose; that the Model Tax Convention be modified to include such provisions or clarifications as are needed in that respect.”

4. Paragraphs 119 and 120 of the Report clarified what types of provisions were envisaged:

“119. Various approaches have been used by countries to reduce that risk. In some cases, countries have been able to determine that the place of effective management of a subsidiary lies in the State of the parent company so as to make it a resident of that country either for domestic law or treaty purposes. In other cases, it has been possible to argue, on the basis of the facts and circumstances of the cases, that a subsidiary was managed by the parent company in such a way that the subsidiary had a permanent establishment in the country of residence of the parent company so as to be able to attribute profits of the subsidiary to that latter country. Another example involves denying companies with no real economic function treaty benefits because these companies are not considered as

beneficial owner of certain income formally attributed to them. The Committee intends to continue to examine these and other approaches to the application of the existing provisions of the Model Tax Convention, with a view to recommending appropriate clarification to the Model Tax Convention.

120. There are, however, a number of additional provisions, such as limitation of benefits rules, which have been included in some tax treaties to specifically restrict access to their benefits. The Committee has also been reviewing these provisions with a view to propose changes to the Model Tax Convention aimed at denying the tax treaty benefits to entities and income covered by practices constituting harmful tax competition. The Committee intends to continue its work in this area with a view to modify the Model Tax Convention or the Commentary so as to include such provisions that countries will be able to incorporate in their tax treaties.”

5. Based on the preceding, the work that the Committee was asked to carry out in relation to a possible restriction of the entitlement to treaty benefits dealt with the following:

- using the concepts of place of effective management and permanent establishment to reduce benefits obtained under a tax convention;
- the possible inclusion in the Model of various types of provisions aimed at ensuring that income sheltered from taxation through regimes constituting harmful tax competition do not inappropriately get the benefits of tax conventions;
- possible ways of ensuring that, where a country that is a party to a tax convention introduces measures resulting in harmful tax competition after the conclusion of the tax convention, benefits of the convention are not inappropriately granted with respect to income covered by such measures;
- the clarification of the concept of “beneficial ownership”.

6. During its work, the Committee also discussed the extent to which one possible approach to dealing with the issues described above might be through a narrowing of the concept of residence in Article 4 of the Model Tax Convention. It concluded that it would not be appropriate to make changes to Article 4 or the Commentary on that Article because:

- to do so could damage the position of persons who are legitimately entitled to treaty benefits; and
- other more effective approaches could be pursued to prevent treaty benefits claims by entities associated with regimes constituting harmful tax competition.

**3. Use of the concepts of place of effective management and permanent establishment**

***a) Changes adopted by the Committee***

7. The Committee decided that the following changes should be made to the Commentary on Article 1 of the Model Tax Convention:

*Add the following new paragraphs 10.1 and 10.2 to the Commentary on Article 1:*

“10.1 Also, in some cases, claims to treaty benefits by subsidiary companies, in particular companies established in tax havens or benefiting from harmful preferential regimes, may be refused where careful consideration of the facts and circumstances of a case shows that the place of effective management of a subsidiary does not lie in its alleged state of residence but, rather, lies in the state of residence of the parent company so as to make it a resident of that latter state for domestic law and treaty purposes (this will be relevant where the domestic law of a state uses the place of management of a legal person, or a similar criterion, to determine its residence).

10.2 Careful consideration of the facts and circumstances of a case may also show that a subsidiary was managed in the state of residence of its parent in such a way that the subsidiary had a permanent establishment (e.g. by having a place of management) in that state to which all or a substantial part of its profits were properly attributable.”

***b) Background***

8. In some cases, countries have been able to determine, on the basis of the facts and circumstances of the cases, that the place of effective management of a subsidiary lies in the State of the parent company so as to make it a resident of that country either for domestic law or treaty purposes. In other cases, it has been possible to argue, on the basis of the facts and circumstances of the cases, that a subsidiary was managed by the parent company in such a way that the subsidiary had a permanent establishment in the country of residence of the parent company so as to be able to attribute profits of the subsidiary to that latter country.

9. Both of these approaches result in a reduction of the benefits that a taxpayer might otherwise claim under a tax convention. The Committee has considered these approaches and it emerged that some Member countries have used them in practice to resist inappropriate treaty claims, as shown by the examples below which are based on the experience of one country.

*The place of effective management of a company and thus its residence is located with its parent company*

10. Company A is constituted under the law of Country A, a low tax jurisdiction, and is a resident of that country under its domestic tax law. All of the shares in A are owned by trust B which is constituted under the law of Country B, another low tax jurisdiction, and which is a resident of that country. Company A owns all of the shares of company C, which is a resident of Country C. The sole director of company C is Mr D, who is a resident of Country C as well. Mr D is directly and fully entitled to the property of trust B. The income of company A consists of dividends from company C, interest on loans to company C and interest on bonds issued by a Country C bank. Investigations by the Country C tax administration showed that company A had no office or personnel of its own. All contacts with the bank concerning the bonds were conducted by Mr D. Later, a sale of all the shares and loans held by company A was negotiated and conducted by Mr D.

11. According to the Country C Supreme Court, in general it is to be assumed that the effective management of a company is exercised by its board of directors and that the place of residence of the company is congruent with the place where its board of directors exercises its duties. However, if judging from the circumstances it is to be assumed that the effective management of the company is exercised by some other person and not by the board of directors, then there may be ground to regard the place from which effective management is exercised by that other person as the place of residence of the company. In the case described above the Supreme Court concluded that company A was effectively managed in Country C by Mr D and thus the company was to be regarded as a resident of Country C, for the purposes of both Country C domestic tax law and the tax arrangement between Country C and Country A.

*A place of management and thus a permanent establishment of a subsidiary is located with its parent company*

12. Company X is constituted under the law of Country A and is a resident of that country according to its domestic tax law. Company X acts as a captive insurance company for a multinational group of enterprises. The top holding company of the group, company Y, is a resident of Country C. The main activities of the group are conducted from the offices of company Y. Investigations by the Country C tax administration showed the following facts. Company X employs one part-time director, who has little if any knowledge of the insurance business and two “local” staff members. It occupies space in an office building, the main user of which is another member of the group. The insurance contracts between company X and the members of the group follow standardised conditions set by company Y. These contracts are reinsured with independent insurance companies, through the intermediary of an insurance broker. The reinsurance contract is negotiated and concluded by personnel from company Y, following strategies set by company Y.

13. The Country C Court decided that, judging from the factual circumstances of the case, the place of effective management of company X was not located in Country C and company X was therefore not a resident of Country C. However, according to the Court, it was to be assumed that to a certain extent the daily management of company X was exercised at the office of company Y. The Court was of the opinion that this extent was such that it exceeded the normal amount of influence that a parent company has on its subsidiary on account of its position as shareholder. The Court therefore concluded that to the extent of that daily management a permanent establishment of company X was located with company Y in Country C.

#### 4. New provisions aimed at restricting the benefits of tax conventions

##### a) *Changes adopted by the Committee*

14. The Committee discussed a proposal for amending the part of the Commentary on Article 1 that deals with the Improper Use of Tax Conventions. This led to the adoption of the following changes to that part of the Commentary:

*Add the following paragraph 9.6 and replace paragraphs 10 to 21 of the Commentary on Article 1 by the following (changes to the existing text of the Commentary appear in **bold italics** for additions and ~~strikethrough~~ for deletions):*

“9.6 The potential application of general anti-abuse provisions does ***not mean that there is no need for the inclusion, in tax conventions, of specific provisions aimed at preventing particular forms of tax avoidance. Where specific avoidance techniques have been identified or where the use of such techniques is especially problematic, it will often be useful to add to the Convention provisions that focus directly on the relevant avoidance strategy. Also, this will be necessary where a State which adopts the view described in paragraph 9.2 above believes that its domestic law lacks the anti-avoidance rules or principles necessary to properly address such strategy.***

10. ***For instance, some forms of tax avoidance have already been expressly dealt with in the Convention, e.g. by the introduction of the concept of “beneficial owner” (in Articles 10, 11, and 12) and of special provisions such as paragraph 2 of Article 17 dealing with*** ~~for so-called artiste-companies (paragraph 2 of Article 17).~~ Such problems are also mentioned in the Commentaries on Article 10 (paragraphs 17 and 22), Article 11 (paragraph 12) and Article 12 (paragraph 7). ~~It may be appropriate for Contracting States to agree in bilateral negotiations that any relief from tax should not apply in certain cases, or to agree that the application of the provisions of domestic laws against tax avoidance should not be affected by the Convention.~~

11. *A further example is provided by two particularly prevalent forms of improper use of the Convention which* Improper uses of the Convention are discussed in two reports from the Committee on Fiscal Affairs entitled “Double Taxation Conventions and the Use of Base Companies” and “Double Taxation Conventions and the Use of Conduit Companies”.<sup>1</sup> As indicated in these reports, the concern expressed in paragraph 9 above has proved to be valid as there has been a growing tendency toward the use of conduit companies to obtain treaty benefits not intended by the Contracting States in their bilateral negotiations. This has led an increasing number of Member countries to implement treaty provisions (both general and specific) to counter abuse and to preserve anti-avoidance legislation in their domestic laws.

12. *The treaty provisions that have been designed to cover these and other forms of abuse take different forms. The following are examples derived from provisions that have been incorporated in bilateral conventions concluded by Member countries.* Several solutions have been considered but, for the reasons set out in the above mentioned reports, no definitive texts have been drafted, no strict recommendations as to the circumstances in which they should be applied made, and no exhaustive list of such possible counter measures given. The texts quoted below are merely intended as suggested benchmarks. *These provide models* that treaty negotiators might consider when searching for a solution to specific cases. In referring to them there should be taken into account:

- the fact that these provisions are not mutually exclusive and that various provisions may be needed in order to address different concerns;
- the degree to which tax advantages may actually be obtained by a particular avoidance strategy ~~conduit companies~~;
- the legal context in both Contracting States and, in particular, the extent to which domestic law already provides an appropriate response to this avoidance strategy; and
- the extent to which bona fide economic activities might be unintentionally disqualified by such provisions.

### *Conduit company cases*

13. *Many countries have attempted to deal with the issue of conduit companies and various approaches have been designed for that purpose. One*

---

1. These two reports are reproduced in Volume II of the loose-leaf version of the OECD Model Tax Convention at pages R(5)-1 and R(6)-1.

## RESTRICTING THE ENTITLEMENT TO TREATY BENEFITS

~~solution A solution to the problem of conduit companies~~ would be to disallow treaty benefits to a company not owned, directly or indirectly, by residents of the State of which the company is a resident. For example, such a “look-through” provision might have the following wording:

“A company that is a resident of a Contracting State shall not be entitled to relief from taxation under this Convention with respect to any item of income, gains or profits if it is owned or controlled directly or through one or more companies, wherever resident, by persons who are not residents of a Contracting State.”

Contracting States wishing to adopt such a provision may also want, in their bilateral negotiations, to determine the criteria according to which a company would be considered as owned or controlled by non-residents.

14. The “look-through approach” *underlying the above provision* seems an adequate basis for treaties with countries that have no or very low taxation and where little substantive business activities would normally be carried on. Even in these cases it might be necessary to alter the provision or to substitute for it another one to safeguard bona fide business activities.

15. ~~Conduit situations can be created by the use of tax exempt (or nearly tax exempt) companies that may be distinguished by special legal characteristics. The improper use of tax treaties may then be avoided by denying the tax treaty benefits to these companies (the exclusion approach). The main cases are specific types of companies enjoying tax privileges in their State of residence giving them in fact a status similar to that of a non-resident. As such privileges are granted mostly to specific types of companies as defined in the commercial law or in the tax law of a country, the most radical solution would be to exclude such companies from the scope of the treaty. Another solution would be to insert a safeguarding clause such as the following:~~

~~“No provision of the Convention conferring an exemption from, or reduction of, tax shall apply to income received or paid by a company as defined under Section ... of the ... Act, or under any similar provision enacted by ... after the signature of the Convention.”~~

The scope of this provision could be limited by referring only to specific types of income, such as dividends, interest, capital gains, or directors' fees. Under such provisions companies of the type concerned would remain entitled to the protection offered under Article 24 (non-discrimination) and to the benefits of Article 25 (mutual agreement procedure) and they would be subject to the provisions of Article 26 (exchange of information).

~~16. — Exclusion provisions are clear and their application is simple, even though they may require administrative assistance in some instances. They are an important instrument by which a State that has created special privileges in its tax law may prevent those privileges from being used in connection with the improper use of tax treaties concluded by that State.~~

~~15.~~ 17. General subject-to-tax provisions provide that treaty benefits in the State of source are granted only if the income in question is subject to tax in the State of residence. This corresponds basically to the aim of tax treaties, namely to avoid double taxation. For a number of reasons, however, the Model Convention does not recommend such a general provision. Whilst this seems adequate with respect to a normal international relationship, a subject-to-tax approach might well be adopted in a typical conduit situation. A safeguarding provision of this kind could have the following wording:

“Where income arising in a Contracting State is received by a company resident of the other Contracting State and one or more persons not resident in that other Contracting State

- a) have directly or indirectly or through one or more companies, wherever resident, a substantial interest in such company, in the form of a participation or otherwise, or
- b) exercise directly or indirectly, alone or together, the management or control of such company,

any provision of this Convention conferring an exemption from, or a reduction of, tax shall apply only to income that is subject to tax in the last-mentioned State under the ordinary rules of its tax law.”

The concept of “substantial interest” may be further specified when drafting a bilateral convention. Contracting States may express it, for instance, as a percentage of the capital or of the voting rights of the company.

~~16.~~ 18. The subject-to-tax approach seems to have certain merits. It may be used in the case of States with a well-developed economic structure and a complex tax law. It will, however, be necessary to supplement this provision by inserting bona fide provisions in the treaty to provide for the necessary flexibility (cf. paragraph 19 below); moreover, such an approach does not offer adequate protection against advanced tax avoidance schemes such as “stepping-stone strategies.”

~~17.~~ 19. The approaches referred to above are in many ways unsatisfactory. They refer to the changing and complex tax laws of the Contracting States and not to the arrangements giving rise to the improper use of conventions. It has been suggested that the conduit problem be dealt with in a more straightforward way

## RESTRICTING THE ENTITLEMENT TO TREATY BENEFITS

by inserting a provision that would single out cases of improper use with reference to the conduit arrangements themselves (the channel approach). Such a provision might have the following wording:

“Where income arising in a Contracting State is received by a company that is a resident of the other Contracting State and one or more persons who are not residents of that other Contracting State

- a) have directly or indirectly or through one or more companies, wherever resident, a substantial interest in such company, in the form of a participation or otherwise, or
- b) exercise directly or indirectly, alone or together, the management or control of such company

any provision of this Convention conferring an exemption from, or a reduction of, tax shall not apply if more than 50 per cent of such income is used to satisfy claims by such persons (including interest, royalties, development, advertising, initial and travel expenses, and depreciation of any kind of business assets including those on immaterial goods and processes).”

**18 20.** A provision of this kind appears to be the only effective way of combating “stepping-stone” devices. It is found in bilateral treaties entered into by Switzerland and the United States and its principle also seems to underly the Swiss provisions against the improper use of tax treaties by certain types of Swiss companies. States that consider including a clause of this kind in their convention should bear in mind that it may cover normal business transactions and would therefore have to be supplemented by a bona fide clause.

**19. 21.** The solutions described above are of a general nature and they need to be accompanied by specific provisions to ensure that treaty benefits will be granted in bona fide cases. Such provisions could have the following wording:

*a) General bona fide provision*

“The foregoing provisions shall not apply where the company establishes that the principal purpose of the company, the conduct of its business and the acquisition or maintenance by it of the shareholding or other property from which the income in question is derived, are motivated by sound business reasons and do not have as primary purpose the obtaining of any benefits under this Convention.”

*b) Activity provision*

“The foregoing provisions shall not apply where the company is engaged in substantive business operations in the Contracting State of which it is a resident and the relief from taxation claimed from the

other Contracting State is with respect to income that is connected with such operations.”

*c) Amount of tax provision*

“The foregoing provisions shall not apply where the reduction of tax claimed is not greater than the tax actually imposed by the Contracting State of which the company is a resident.”

*d) Stock exchange provision*

“The foregoing provisions shall not apply to a company that is a resident of a Contracting State if the principal class of its shares is registered on an approved stock exchange in a Contracting State or if such company is wholly owned—directly or through one or more companies each of which is a resident of the first-mentioned State—by a company which is a resident of the first-mentioned State and the principal class of whose shares is so registered.”

*e) Alternative relief provision*

In cases where an anti-abuse clause refers to non-residents of a Contracting State, it could be provided that the term “shall not be deemed to include residents of third States that have income tax conventions in force with the Contracting State from which relief from taxation is claimed and such conventions provide relief from taxation not less than the relief from taxation claimed under this Convention.”

These provisions illustrate possible approaches. The specific wording of the provisions to be included in a particular treaty depends on the general approach taken in that treaty and should be determined on a bilateral basis. Also, where the competent authorities of the Contracting States have the power to apply discretionary provisions, it may be considered appropriate to include an additional rule that would give the competent authority of the source country the discretion to allow the benefits of the Convention to a resident of the other State even if the resident fails to pass any of the tests described above.

***20. Whilst the preceding paragraphs identify different approaches to deal with conduit situations, each of them deals with a particular aspect of the problem commonly referred to as “treaty shopping”. States wishing to address the issue in a comprehensive way may want to consider the following example of detailed limitation-of-benefits provisions aimed at preventing persons who are not resident of either Contracting States from accessing the benefits of a Convention through the use of an entity that would otherwise qualify as a resident of one of these States, keeping in mind that adaptations may be***

*necessary and that many States prefer other approaches to deal with treaty shopping:*

*“1. Except as otherwise provided in this Article, a resident of a Contracting State who derives income from the other Contracting State shall be entitled to all the benefits of this Convention otherwise accorded to residents of a Contracting State only if such resident is a “qualified person” as defined in paragraph 2 and meets the other conditions of this Convention for the obtaining of such benefits.*

*2. A resident of a Contracting State is a qualified person for a fiscal year only if such resident is either:*

- a) an individual;*
- b) a qualified governmental entity;*
- c) a company, if*
  - i) the principal class of its shares is listed on a recognised stock exchange specified in subparagraph a) or b) of paragraph 6 and is regularly traded on one or more recognized stock exchanges, or*
  - ii) at least 50 percent of the aggregate vote and value of the shares in the company is owned directly or indirectly by five or fewer companies entitled to benefits under subdivision i) of this subparagraph, provided that, in the case of indirect ownership, each intermediate owner is a resident of either Contracting State;*
- d) a charity or other tax-exempt entity, provided that, in the case of a pension trust or any other organization that is established exclusively to provide pension or other similar benefits, more than 50 percent of the person's beneficiaries, members or participants are individuals resident in either Contracting State; or*
- e) a person other than an individual, if:*
  - i) on at least half the days of the fiscal year persons that are qualified persons by reason of subparagraph a), b) or d) or subdivision c) i) of this paragraph own, directly or indirectly, at least 50 percent of the aggregate vote and value of the shares or other beneficial interests in the person, and*

*in the form of payments that are deductible for purposes of the taxes covered by this Convention in the person's State of residence (but not including arm's length payments in the ordinary course of business for services or tangible property and payments in respect of financial obligations to a bank, provided that where such a bank is not a resident of a Contracting State such payment is attributable to a permanent establishment of that bank located in one of the Contracting States).*

3. a) *A resident of a Contracting State will be entitled to benefits of the Convention with respect to an item of income, derived from the other State, regardless of whether the resident is a qualified person, if the resident is actively carrying on business in the first-mentioned State (other than the business of making or managing investments for the resident's own account, unless these activities are banking, insurance or securities activities carried on by a bank, insurance company or registered securities dealer), the income derived from the other Contracting State is derived in connection with, or is incidental to, that business and that resident satisfies the other conditions of this Convention for the obtaining of such benefits.*
- b) *If the resident or any of its associated enterprises carries on a business activity in the other Contracting State which gives rise to an item of income, subparagraph a) shall apply to such item only if the business activity in the first-mentioned State is substantial in relation to business carried on in the other State. Whether a business activity is substantial for purposes of this paragraph will be determined based on all the facts and circumstances.*
- c) *In determining whether a person is actively carrying on business in a Contracting State under subparagraph a), activities conducted by a partnership in which that person is a partner and activities conducted by persons connected to such person shall be deemed to be conducted by such person. A person shall be connected to another if one possesses at least 50 percent of the beneficial interest in the other (or, in the case of a company, at least 50 percent of the aggregate vote and value of the company's shares) or another person possesses, directly or indirectly, at least 50 percent of the beneficial interest (or, in the case of a company, at least 50 percent of the aggregate vote and value of the company's shares) in each person. ## RESTRICTING THE ENTITLEMENT TO TREATY BENEFITS

*considered to be connected to another if, based on all the facts and circumstances, one has control of the other or both are under the control of the same person or persons.*

*4. Notwithstanding the preceding provisions of this Article, if a company that is a resident of a Contracting State, or a company that controls such a company, has outstanding a class of shares*

- a) which is subject to terms or other arrangements which entitle its holders to a portion of the income of the company derived from the other Contracting State that is larger than the portion such holders would receive absent such terms or arrangements (“the disproportionate part of the income”); and*
- b) 50 percent or more of the voting power and value of which is owned by persons who are not qualified persons*

*the benefits of this Convention shall not apply to the disproportionate part of the income.*

*5. A resident of a Contracting State that is neither a qualified person pursuant to the provisions of paragraph 2 or entitled to benefits under paragraph 3 or 4 shall, nevertheless, be granted benefits of the Convention if the competent authority of that other Contracting State determines that the establishment, acquisition or maintenance of such person and the conduct of its operations did not have as one of its principal purposes the obtaining of benefits under the Convention.*

*6. For the purposes of this Article the term “recognized stock exchange” means:*

- a) in State A .....;*
- b) in State B .....; and*
- c) any other stock exchange which the competent authorities agree to recognize for the purposes of this Article.”*

*Provisions which are aimed at entities benefiting from preferential tax regimes*

*21. [OLD 15] Specific types of companies enjoying tax privileges in their State of residence facilitate conduit arrangements and raise the issue of harmful tax practices.* Conduit situations can be created by the use of *Where* tax-exempt (or nearly tax-exempt) companies that may be distinguished by special legal characteristics, *the* The improper use of tax treaties may then be avoided by denying the tax treaty benefits to these companies (the exclusion approach). The main cases are specific types of companies enjoying tax privileges in their State of residence giving them in fact a status similar to that of a non-resident. As such privileges are granted

mostly to specific types of companies as defined in the commercial law or in the tax law of a country, the most radical solution would be to exclude such companies from the scope of the treaty. Another solution would be to insert a safeguarding clause such as the following *which would apply to the income received or paid by such companies and which could be drafted along the following lines:*

“No provision of the Convention conferring an exemption from, or reduction of, tax shall apply to income received or paid by a company as defined under Section ... of the ... Act, or under any similar provision enacted by ... after the signature of the Convention.”

The scope of this provision could be limited by referring only to specific types of income, such as dividends, interest, capital gains, or directors' fees. Under such provisions companies of the type concerned would remain entitled to the protection offered under Article 24 (non-discrimination) and to the benefits of Article 25 (mutual agreement procedure) and they would be subject to the provisions of Article 26 (exchange of information).

**21.1 [OLD 16]** Exclusion provisions are clear and their application is simple, even though they may require administrative assistance in some instances. They are an important instrument by which a State that has created special privileges in its tax law may prevent those privileges from being used in connection with the improper use of tax treaties concluded by that State.

**21.2** *Where it is not possible or appropriate to identify the companies enjoying tax privileges by reference to their special legal characteristics, a more general formulation will be necessary. The following provision aims at denying the benefits of the Convention to entities which would otherwise qualify as residents of a Contracting State but which enjoy, in that State, a preferential tax regime restricted to foreign-held entities (i.e. not available to entities that belong to residents of that State):*

*“Any company, trust or partnership that is a resident of a Contracting State and is beneficially owned or controlled directly or indirectly by one or more persons who are not residents of that State shall not be entitled to the benefits of this Convention if the amount of the tax imposed on the income or capital of the company, trust or partnership by that State (after taking into account any reduction or offset of the amount of tax in any manner, including a refund, reimbursement, contribution, credit or allowance to the company, trust or partnership, or to any other person) is substantially lower than the amount that would be imposed by that State if all of the shares of the capital stock of the company or all of the interests in the trust or partnership, as the case may be, were beneficially owned by one or more residents of that State.”*

*Provisions which are aimed at particular types of income*

**21.3** *The following provision aims at denying the benefits of the Convention with respect to income that is subject to low or no tax under a preferential tax regime:*

*“1. The benefits of this Convention shall not apply to income which may, in accordance with the other provisions of the Convention, be taxed in a Contracting State and which is derived from activities the performance of which do not require substantial presence in that State, including :*

- a) such activities involving banking, shipping, financing, or insurance or electronic commerce activities; or*
- b) activities involving headquarter or coordination centre or similar arrangements providing company or group administration, financing or other support; or*
- c) activities which give rise to passive income, such as dividends, interest and royalties*

*where, under the laws or administrative practices of that State, such income is preferentially taxed and, in relation thereto, information is accorded confidential treatment that prevents the effective exchange of information.*

*2. For the purposes of paragraph 1, income is preferentially taxed in a Contracting State if, other than by reason of the preceding Articles of this Agreement, an item of income:*

- a) is exempt from tax; or*
- b) is taxable in the hands of a taxpayer but that is subject to a rate of tax that is lower than the rate applicable to an equivalent item that is taxable in the hands of similar taxpayers who are residents of that State; or*
- c) benefits from a credit, rebate or other concession or benefit that is provided directly or indirectly in relation to that item of income, other than a credit for foreign tax paid. “*

*Anti-abuse rules dealing with source taxation of specific types of income*

**21.4** *The following provision has the effect of denying the benefits of specific Articles of the convention that restrict source taxation where transactions have been entered into for the main purpose of obtaining these benefits. The Articles concerned are 10, 11, 12 and 21; the provision should be slightly modified as indicated below to deal with the specific type of income covered by each of these Articles:*

*“The provisions of this Article shall not apply if it was the main purpose or one of the main purposes of any person concerned with the creation or assignment of the [Article 10: “shares or other rights”; Article 11: “debt-claim”; Articles 12 and 21: “rights”] in respect of which the [Article 10: “dividend”; Article 11: “interest”; Articles 12 “royalties” and Article 21: “income”] is paid to take advantage of this Article by means of that creation or assignment.”*

*Provisions which are aimed at preferential regimes introduced after the signature of the convention*

*21.5 States may wish to prevent abuses of their conventions involving provisions introduced by a Contracting State after the signature of the Convention. The following provision aims to protect a Contracting State from having to give treaty benefits with respect to income benefiting from a special regime for certain offshore income introduced after the signature of the treaty:*

*“The benefits of Articles 6 to 22 of this Convention shall not accrue to persons entitled to any special tax benefit under:*

- a) a law of either one of the States which has been identified in an exchange of notes between the States; or*
- b) any substantially similar law subsequently enacted.”*

***b) Background***

15. The Committee has examined what new types of provisions for the Model Tax Convention could be appropriate to ensure that income sheltered from taxation through harmful tax regimes would not inappropriately get the benefits of tax conventions.

16. As part of that work, several possible provisions were put forward. Several delegates advocated the inclusion of a comprehensive limitation of benefits provision. Other delegates opposed the inclusion of such a provision favouring an Article by Article approach to those provisions most likely to be abused. It was decided that these two approaches need not be alternatives and that both could be included, complementing each other in a Convention. It was also agreed that the relevant part of the Commentary on Article 1 should be redrafted to include some of the provisions put forward during the work on this issue.

**5. Restriction of the benefits of tax conventions after the introduction of a new regime**

17. Another issue examined by the Committee was how to ensure that, where a country that is a party to a tax convention introduces measures resulting in harmful tax competition after the conclusion of the tax convention, benefits of the convention are not inappropriately granted with respect to income covered by such measures. Consideration of the provisions put forward by delegates in relation to the previous issue revealed that most would be effective in dealing both with regimes existing at the time of entry into effect of a convention and new regimes introduced later. However such provisions might not be included in a convention where no harmful preferential regime existed at the time of conclusion of the convention.

**a) Changes adopted by the Committee**

18. The Committee discussed the possibility of including in the Convention a so-called “switch-over clause” in order to deal with harmful preferential regimes introduced after the signature of a convention.

19. During that discussion, the Committee debated the merits of such a clause and examined a proposal for including such a provision in Article 23A. After discussion, it was agreed that the proposed provision should not be included in Article 23A but that the Commentary could include the suggestion to adopt such a clause and could provide an example.

20. The Committee therefore adopted the following change to be made to the Commentary on Articles 23A and 23B:

*Add the following paragraph 31.1 to the Commentaries on Articles 23A and 23B:*

“31.1 One example where paragraph 2 could be so amended is where a State that generally adopts the exemption method considers that that method should not apply to items of income that benefit from a preferential tax treatment in the other State by reason of a tax measure that has been introduced in that State after the date of signature of the Convention. In order to include these items of income, paragraph 2 could be amended as follows:

“2. Where a resident of a Contracting State derives an item of income which

- a) in accordance with the provisions of Articles 10 and 11, may be taxed in the other Contracting State, or
- b) in accordance with the provisions of this Convention, may be taxed in the other Contracting State but which benefits from a

preferential tax treatment in that other State by reason of a tax measure

- i) that has been introduced in the other Contracting State after the date of signature of the Convention, and
- ii) in respect of which that State has notified the competent authorities of the other Contracting State, before the item of income is so derived and after consultation with that other State, that this paragraph shall apply,

the first-mentioned State shall allow as a deduction from the tax on the income of that resident an amount equal to the tax paid in that other State. Such deduction shall not, however, exceed that part of the tax, as computed before the deduction is given, which is attributable to such item of income derived from that other State.”

## 6. Clarification of the concept of “beneficial ownership”

### a) Changes adopted by the Committee

21. The Committee adopted the following changes aimed at clarifying the meaning of “beneficial ownership” in the Commentary on Articles 10, 11 and 12:

*Replace paragraph 12 of the Commentary on Article 10 with the following new paragraphs (changes to the existing text of the Commentary appear in **bold italics** for additions and ~~strikethrough~~ for deletions):*

***“12. The requirement of beneficial ownership was introduced in paragraph 2 of Article 10 to clarify the meaning of the words “paid...to a resident” as they are used in paragraph 1 of the Article. It makes plain that the State of source is not obliged to give up taxing rights over dividend income merely because that income was immediately received by a resident of a State with which the State of source had concluded a convention. The term “beneficial owner” is not used in a narrow technical sense, rather, it should be understood in its context and in light of the object and purposes of the Convention, including avoiding double taxation and the prevention of fiscal evasion and avoidance.***

***12.1 Where an item of income is received by a resident of a Contracting State acting in the capacity of agent or nominee it would be inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption merely on account of the status of the immediate recipient of the income as a resident of the other Contracting State. The immediate recipient of the income in this situation qualifies as a resident but no potential double taxation arises as a consequence of that status since the recipient is not treated as the owner of the income for tax purposes in the State of residence. It would***

*be equally inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption where a resident of a Contracting State, otherwise than through an agency or nominee relationship, simply acts as a conduit for another person who in fact receives the benefit of the income concerned. For these reasons, the report from the Committee on Fiscal Affairs entitled “Double Taxation Conventions and the Use of Conduit Companies”<sup>1</sup> concludes that a conduit company cannot normally be regarded as the beneficial owner if, though the formal owner, it has, as a practical matter, very narrow powers which render it, in relation to the income concerned, a mere fiduciary or administrator acting on account of the interested parties.*

12.2 Under ~~paragraph 2,~~ ***Subject to other conditions imposed by the Article,*** the limitation of tax in the State of source ~~remains is not~~ available when an intermediary, such as an agent or nominee ***located in a Contracting State or in a third State,*** is interposed between the beneficiary and the payer ***but the beneficial owner is a resident of the other Contracting State.*** (The text of the Model was amended in 1995 to clarify this point, which has been the consistent position of all Member countries). States which wish to make this more explicit are free to do so during bilateral negotiations.”

*Replace paragraph 8 of the Commentary on Article 11 with the following new paragraphs:*

***“8. The requirement of beneficial ownership was introduced in paragraph 2 of Article 11 to clarify the meaning of the words “paid to a resident” as they are used in paragraph 1 of the Article. It makes plain that the State of source is not obliged to give up taxing rights over interest income merely because that income was immediately received by a resident of a State with which the State of source had concluded a convention. The term “beneficial owner” is not used in a narrow technical sense, rather, it should be understood in its context and in light of the object and purposes of the Convention, including avoiding double taxation and the prevention of fiscal evasion and avoidance.***

***8.1 Relief or exemption in respect of an item of income is granted by the State of source to a resident of the other Contracting State to avoid in whole or in part the double taxation that would otherwise arise from the concurrent taxation of that income by the State of residence. Where an item of income is received by a resident of a Contracting State acting in the capacity of agent or***

*nominee it would be inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption merely on account of the status of the immediate recipient of the income as a resident of the other Contracting State. The immediate recipient of the income in this situation qualifies as a resident but no potential double taxation arises as a consequence of that status since the recipient is not treated as the owner of the income for tax purposes in the State of residence. It would be equally inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption where a resident of a Contracting State, otherwise than through an agency or nominee relationship, simply acts as a conduit for another person who in fact receives the benefit of the income concerned. For these reasons, the report from the Committee on Fiscal Affairs entitled "Double Taxation Conventions and the Use of Conduit Companies"<sup>1</sup> concludes that a conduit company cannot normally be regarded as the beneficial owner if, though the formal owner, it has, as a practical matter, very narrow powers which render it, in relation to the income concerned, a mere fiduciary or administrator acting on account of the interested parties.*

8.2 Under paragraph 2, *Subject to other conditions imposed by the Article*, the limitation of tax in the State of source *remains* ~~is not~~ available when an intermediary, such as an agent or nominee *located in a Contracting State or in a third State*, is interposed between the beneficiary and the payer *but the beneficial owner is a resident of the other Contracting State*. (The text of the Model was amended in 1995 to clarify this point, which has been the consistent position of all Member countries). States which wish to make this more explicit are free to do so during bilateral negotiations."

*Replace paragraph 4 of the Commentary on Article 12 with the following new paragraphs:*

*"4. The requirement of beneficial ownership was introduced in paragraph 1 of Article 12 to clarify how the Article applies in relation to payments made to intermediaries. It makes plain that the State of source is not obliged to give up taxing rights over royalty income merely because that income was immediately received by a resident of a State with which the State of source had concluded a convention. The term "beneficial owner" is not used in a narrow technical sense, rather, it should be understood in its context and in light of the object and purposes of the Convention, including avoiding double taxation and the prevention of fiscal evasion and avoidance.*

---

1. Reproduced at page R(6)-1 of Volume II of the loose-leaf version of the OECD Model Tax Convention.

**4.1** *Relief or exemption in respect of an item of income is granted by the State of source to a resident of the other Contracting State to avoid in whole or in part the double taxation that would otherwise arise from the concurrent taxation of that income by the State of residence. Where an item of income is received by a resident of a Contracting State acting in the capacity of agent or nominee it would be inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption merely on account of the status of the immediate recipient of the income as a resident of the other Contracting State. The immediate recipient of the income in this situation qualifies as a resident but no potential double taxation arises as a consequence of that status since the recipient is not treated as the owner of the income for tax purposes in the State of residence. It would be equally inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption where a resident of a Contracting State, otherwise than through an agency or nominee relationship, simply acts as a conduit for another person who in fact receives the benefit of the income concerned. For these reasons, the report from the Committee on Fiscal Affairs entitled “Double Taxation Conventions and the Use of Conduit Companies”<sup>1</sup> concludes that a conduit company cannot normally be regarded as the beneficial owner if, though the formal owner, it has, as a practical matter, very narrow powers which render it, in relation to the income concerned, a mere fiduciary or administrator acting on account of the interested parties.*

**4.2** ~~Under paragraph 1, Subject to other conditions imposed by the Article,~~ the **limitation of exemption** from tax in the State of source ~~remains is not~~ available when an intermediary, such as an agent or nominee, is interposed between the beneficiary and the payer, ~~unless~~ **in those cases where** the beneficial owner is a resident of the other Contracting State. (The text of the Model was amended in 1995 to clarify this point, which has been the consistent position of all Member countries). States which wish to make this more explicit are free to do so during bilateral negotiations.”

## **b) Background**

22. The Committee discussed various options concerning the clarification of the concept of “beneficial ownership”. Some delegates noted that the beneficial ownership test very much depended on the facts and circumstances of the individual case and that it was therefore difficult to develop a generally applicable definition of the concept. Most delegates still took the view that it would be useful to further clarify the concept. It was

---

1. Reproduced at page R(6)-1 of Volume II of the loose-leaf version of the OECD Model Tax Convention.

noted that any addition to the Commentary had to be drafted in a neutral way so as to avoid inadvertent limitation of the concept.

*Meaning of beneficial owner*

23. The Model Convention does not provide a definition of “beneficial owner”. The Commentary indicates that an intermediary, such as an agent or nominee, is not the beneficial owner, but otherwise does not elaborate on the meaning of the term. In the absence of more extensive clarification the concept of beneficial ownership presents several difficulties of interpretation and application. While it is obvious that the use of the concept excludes bare legal ownership as the criterion for determining availability of treaty benefits it is less apparent what is intended to be the salient connection with a stream of income in a case where different interests in the income are held by diverse hands who might each be considered, as a matter of general law, to possess some attributes of ownership.

*Report on the use of conduit companies*

24. Paragraph 14 b) of the 1987 report from the Committee on Fiscal Affairs entitled “Double Taxation Conventions and the Use of Conduit Companies”<sup>1</sup> discussed the application of the requirement of beneficial ownership in abuse cases:

“The OECD has incorporated in its revised 1977 Model provisions precluding in certain cases persons not entitled to a treaty from obtaining its benefits through a “conduit company”.

[...]

b) Articles 10 to 12 of the OECD Model deny the limitation of tax in the State of source on dividends, interest and royalties if the conduit company is not its “beneficial owner”. Thus the limitation is not available when, economically, it would benefit a person not entitled to it who interposed the conduit company as an intermediary between himself and the payer of the income (paragraphs 12, 8 and 4 of the Commentary to Articles 10, 11 and 12 respectively). The Commentaries mention the case of a nominee or agent. The provisions would, however, apply also to other cases where a person enters into contracts or takes over obligations under which he has a similar function to those of a nominee or an agent. Thus a conduit company can normally not be regarded as the beneficial owner if, though the formal owner of certain assets, it has very narrow powers which render it a mere fiduciary

## RESTRICTING THE ENTITLEMENT TO TREATY BENEFITS

or an administrator acting on account of the interested parties (most likely the shareholders of the conduit company). In practice, however, it will usually be difficult for the country of source to show that the conduit company is not the beneficial owner. The fact that its main function is to hold assets or rights is not itself sufficient to categorise it as a mere intermediary, although this may indicate that further examination is necessary. This examination will in any case be highly burdensome for the country of source and not even the country of residence of the conduit company may have the necessary information regarding the shareholders of the conduit company, the company's relationships to the shareholders or other interested parties or the decision-making process of the conduit company. So even an exchange of information between the country of source and the country of the conduit company may not solve the problem. It is apparently in view of these difficulties that the Commentaries on the 1977 OECD Model mentioned the possibility of defining more specifically during bilateral negotiations the treatment that should be applicable to such companies (cf. paragraph 22 of the Commentary on Article 10)."

# **Exhibit 47**

# 2014 UPDATE TO THE OECD MODEL TAX CONVENTION

*used for such other purposes under the laws of both States and the competent authority of the supplying State authorises such use.*

## C. COMMENTARY

### *Commentary on Article 3*

9. Replace paragraph 3 of the Commentary on Article 3 by the following:

3. The term “company” means in the first place any body corporate. In addition, the term covers any other taxable unit that is treated as a body corporate ***for the purposes of the tax law of the Contracting State of which it is a resident***~~according to the tax laws of the Contracting State in which it is organised~~. The definition is drafted with special regard to the Article on dividends. The term “company” has a bearing only on that Article, paragraph 7 of Article 5, and Article 16.

10. Add the following new paragraph 16 to the Commentary on Article 3:

***16. Israel reserves the right to include a trust within the definition of a “person”.***

### *Commentary on Article 4*

11. Delete the following paragraph 27 of the Commentary on Article 4:

~~27. — Canada reserves the right to use as the test for paragraph 3 the place of incorporation or organisation with respect to a company and, failing that, to deny dual resident companies the benefits under the Convention.~~

12. Delete the following paragraph 32 of the Commentary on Article 4:

~~32. — Germany reserves the right to include a provision under which a partnership that is not a resident of a Contracting State according to the provisions of paragraph 1 is deemed to be a resident of the Contracting State where the place of its effective management is situated, but only to the extent that the income derived from the other Contracting State or the capital situated in that other State is liable to tax in the first mentioned State.~~

13. Add the following new paragraph 33 to the Commentary on Article 4:

***33. Israel reserves the right to include a separate provision regarding a trust that is a resident of both Contracting States.***

14. Add the following new paragraph 34 to the Commentary on Article 4:

***34. Estonia reserves the right to include the place of incorporation or similar criterion in paragraph 1.***

### *Commentary on Article 5*

15. Add the following new paragraph 45.1 to the Commentary on Article 5:

***45.1 Germany, as regards sentence 3 of paragraph 17, takes the view that business activities limited to on-site planning and supervision over a construction project can only constitute a permanent establishment if they meet the requirements specified in paragraph 1 of Article 5.***

~~17. Germany reserves the right not to insert paragraph 2 in its conventions but is prepared in the course of negotiations to accept this paragraph based on Germany's long-standing and unaltered understanding that the other Contracting State is only obliged to make an adjustment to the amount of tax to the extent that it agrees, unilaterally or in a mutual agreement procedure, with the adjustment of profits by the first mentioned State.~~

33. Replace paragraph 19 of the Commentary on Article 9 by the following:

19. **Hungary and** Slovenia reserves the right to specify in paragraph 2 that a correlative adjustment will be made only if ~~it~~**they** considers that the primary adjustment is justified.

#### **Commentary on Article 10**

34. Replace paragraphs 12 to 12.2 of the Commentary on Article 10 by the following:

12. The requirement of beneficial owner was introduced in paragraph 2 of Article 10 to clarify the meaning of the words "paid ... to a resident" as they are used in paragraph 1 of the Article. It makes plain that the State of source is not obliged to give up taxing rights over dividend income merely because that income was ~~immediately received by~~**paid direct to** a resident of a State with which the State of source had concluded a convention. *[the rest of the paragraph has been moved to new paragraph 12.1]*

**12.1** *Since the term "beneficial owner" was added to address potential difficulties arising from the use of the words "paid to ... a resident" in paragraph 1, it was intended to be interpreted in this context and not to refer to any technical meaning that it could have had under the domestic law of a specific country (in fact, when it was added to the paragraph, the term did not have a precise meaning in the law of many countries).* The term "beneficial owner" is *therefore* not used in a narrow technical sense *(such as the meaning that it has under the trust law of many common law countries<sup>1</sup>)*, rather, it should be understood in its context, *in particular in relation to the words "paid ... to a resident"*, and in light of the object and purposes of the Convention, including avoiding double taxation and the prevention of fiscal evasion and avoidance.

---

*[Footnote to paragraph 12.1]*

1. ***For example, where the trustees of a discretionary trust do not distribute dividends earned during a given period, these trustees, acting in their capacity as such (or the trust, if recognised as a separate taxpayer), could constitute the beneficial owners of such income for the purposes of Article 10 even if they are not the beneficial owners under the relevant trust law.***

~~12.42~~ Where an item of income is ~~received by~~**paid to** a resident of a Contracting State acting in the capacity of agent or nominee it would be inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption merely on account of the status of the ~~immediate~~**direct** recipient of the income as a resident of the other Contracting State. The ~~immediate-direct~~ recipient of the income in this situation qualifies as a resident but no potential double taxation arises as a consequence of that status since the recipient is not treated as the owner of the income for tax purposes in the State of residence. *[the rest of the paragraph has been moved to new paragraph 12.3]*

**12.3** It would be equally inconsistent with the object and purpose of the Convention for the State of source to grant relief or exemption where a resident of a Contracting State, otherwise than through

an agency or nominee relationship, simply acts as a conduit for another person who in fact receives the benefit of the income concerned. For these reasons, the report from the Committee on Fiscal Affairs entitled “Double Taxation Conventions and the Use of Conduit Companies”<sup>1</sup> concludes that a conduit company cannot normally be regarded as the beneficial owner if, though the formal owner, it has, as a practical matter, very narrow powers which render it, in relation to the income concerned, a mere fiduciary or administrator acting on account of the interested parties.

---

[Footnote to paragraph 12.3]

1. Reproduced at page R(6)-1 of Volume II of the *full-length loose-leaf* version of the OECD Model Tax Convention.

*12.4 In these various examples (agent, nominee, conduit company acting as a fiduciary or administrator), the direct recipient of the dividend is not the “beneficial owner” because that recipient’s right to use and enjoy the dividend is constrained by a contractual or legal obligation to pass on the payment received to another person. Such an obligation will normally derive from relevant legal documents but may also be found to exist on the basis of facts and circumstances showing that, in substance, the recipient clearly does not have the right to use and enjoy the dividend unconstrained by a contractual or legal obligation to pass on the payment received to another person. This type of obligation would not include contractual or legal obligations that are not dependent on the receipt of the payment by the direct recipient such as an obligation that is not dependent on the receipt of the payment and which the direct recipient has as a debtor or as a party to financial transactions, or typical distribution obligations of pension schemes and of collective investment vehicles entitled to treaty benefits under the principles of paragraphs 6.8 to 6.34 of the Commentary on Article 1. Where the recipient of a dividend does have the right to use and enjoy the dividend unconstrained by a contractual or legal obligation to pass on the payment received to another person, the recipient is the “beneficial owner” of that dividend. It should also be noted that Article 10 refers to the beneficial owner of a dividend as opposed to the owner of the shares, which may be different in some cases.*

*12.5 The fact that the recipient of a dividend is considered to be the beneficial owner of that dividend does not mean, however, that the limitation of tax provided for by paragraph 2 must automatically be granted. This limitation of tax should not be granted in cases of abuse of this provision (see also paragraphs 17 and 22 below). As explained in the section on “Improper use of the Convention” in the Commentary on Article 1, there are many ways of addressing conduit company and, more generally, treaty shopping situations. These include specific anti-abuse provisions in treaties, general anti-abuse rules and substance-over-form or economic substance approaches. Whilst the concept of “beneficial owner” deals with some forms of tax avoidance (i.e. those involving the interposition of a recipient who is obliged to pass on the dividend to someone else), it does not deal with other cases of treaty shopping and must not, therefore, be considered as restricting in any way the application of other approaches to addressing such cases.*

*12.6 The above explanations concerning the meaning of “beneficial owner” make it clear that the meaning given to this term in the context of the Article must be distinguished from the different meaning that has been given to that term in the context of other instruments<sup>1</sup> that concern the determination of the persons (typically the individuals) that exercise ultimate control over entities or assets. That different meaning of “beneficial owner” cannot be applied in the context of the Article. Indeed, that meaning, which refers to natural persons (i.e. individuals), cannot be reconciled with the express wording of subparagraph 2 a), which refers to the situation where a company is the beneficial owner of a dividend. In the context of Article 10, the term “beneficial owner” is intended to address difficulties arising from the use of the words “paid to”*

*in relation to dividends rather than difficulties related to the ownership of the shares of the company paying these dividends. For that reason, it would be inappropriate, in the context of that Article, to consider a meaning developed in order to refer to the individuals who exercise “ultimate effective control over a legal person or arrangement.”<sup>2</sup>*

---

*[Footnotes to paragraph 12.6]*

1. *See, for example, Financial Action Task Force, International Standards on Combating Money Laundering and the Financing of Terrorism & Proliferation – The FATF Recommendations (OECD-FATF, Paris, 2012), which sets forth in detail the international anti-money laundering standard and which includes the following definition of beneficial owner (at page 110): “the natural person(s) who ultimately owns or controls a customer and/or the person on whose behalf a transaction is being conducted. It also incorporates those persons who exercise ultimate effective control over a legal person or arrangement.” Similarly, the 2001 report of the OECD Steering Group on Corporate Governance, “Behind the Corporate Veil: Using Corporate Entities for Illicit Purposes” (OECD, Paris, 2001), defines beneficial ownership as follows (at page 14):*

*In this Report, “beneficial ownership” refers to ultimate beneficial ownership or interest by a natural person. In some situations, uncovering the beneficial owner may involve piercing through various intermediary entities and/or individuals until the true owner who is a natural person is found. With respect to corporations, ownership is held by shareholders or members. In partnerships, interests are held by general and limited partners. In trusts and foundations, beneficial ownership refers to beneficiaries, which may also include the settlor or founder.*

2. *See the Financial Action Task Force’s definition quoted in the previous note.*

12.72 Subject to other conditions imposed by the Article, the limitation of tax in the State of source remains available when an intermediary, such as an agent or nominee located in a Contracting State or in a third State, is interposed between the beneficiary and the payer but the beneficial owner is a resident of the other Contracting State (the text of the Model was amended in 1995 **and in 2014** to clarify this point, which has been the consistent position of all Member countries). ~~States which wish to make this more explicit are free to do so during bilateral negotiations.~~

35. Replace paragraph 28 of the Commentary on Article 10 by the following:

28. Payments regarded as dividends may include not only distributions of profits decided by annual general meetings of shareholders, but also other benefits in money or money’s worth, such as bonus shares, bonuses, profits on a liquidation **or redemption of shares (see paragraph 31 of the Commentary on Article 13)** and disguised distributions of profits. The reliefs provided in the Article apply so long as the State of which the paying company is a resident taxes such benefits as dividends. It is immaterial whether any such benefits are paid out of current profits made by the company or are derived, for example, from reserves, *i.e.* profits of previous financial years. Normally, distributions by a company which have the effect of reducing the membership rights, for instance, payments constituting a reimbursement of capital in any form whatever, are not regarded as dividends.

36. Replace paragraph 75 of the Commentary on Article 10 by the following:

75. *Israel, Mexico, Portugal and Turkey reserve their positions on the rates of tax in paragraph 2.*

37. Add the following new paragraph 76 to the Commentary on Article 10:

76. *Estonia reserves the right not to include the requirement for the competent authorities to settle by mutual agreement the mode of application of paragraph 2.*

38. Add the following new paragraph 82 to the Commentary on Article 10:

82. *Israel reserves the right to exclude payments made by a Real Estate Investment Trust which is a resident of Israel from the definition of dividends in paragraph 3 and to tax those payments according to its domestic law.*

39. Add the following new paragraph 82.1 to the Commentary on Article 10:

82.1 *Estonia reserves the right to replace, in paragraph 3, the words “income from other corporate rights” by “income from other rights”.*

#### ***Commentary on Article 11***

40. Replace paragraph 7.7 of the Commentary on Article 11 by the following:

7.7 The problem described in paragraph 7.1, which essentially arises because taxation by the State of source is typically levied on the gross amount of the interest and therefore ignores the real amount of income derived from the transaction for which the interest is paid, is particularly important in the case of financial institutions. For instance, a bank generally finances the loan which it grants with funds lent to it and, in particular, funds accepted on deposit. Since the State of source, in determining the amount of tax payable on the interest, will usually ignore the cost of funds for the bank, the amount of tax may prevent the transaction from occurring unless the amount of that tax is borne by the debtor. For that reason, many States provide that interest paid to a financial institution such as a bank will be exempt from any tax at source. States wishing to do so may agree to include the following ~~interest~~ in a paragraph providing ~~for from~~ exemption of certain interest from taxation in the State of source:

d) is a financial institution;

41. Replace paragraphs 9 to 11 of the Commentary on Article 11 by the following:

9. The requirement of beneficial ownership~~ship~~ was introduced in paragraph 2 of Article 11 to clarify the meaning of the words “paid to a resident” as they are used in paragraph 1 of the Article. It makes plain that the State of source is not obliged to give up taxing rights over interest income merely because that income was ~~immediately received~~ **paid direct to** a resident of a State with which the State of source had concluded a convention. [*the rest of the paragraph has been moved to new paragraph 9.1*]

9.1 *Since the term “beneficial owner” was added to address potential difficulties arising from the use of the words “paid to a resident” in paragraph 1, it was intended to be interpreted in this context and not to refer to any technical meaning that it could have had under the domestic law of a specific country (in fact, when it was added to the paragraph, the term did not have a precise meaning in the law of many countries).* The term “beneficial owner” is *therefore* not used in a

## TITLE OF THE CONVENTION

**Convention between (State A) and (State B)  
for the elimination of double taxation with respect to taxes on income and  
on capital and the prevention of tax evasion and avoidance**

## PREAMBLE TO THE CONVENTION

(State A) and (State B),

Desiring to further develop their economic relationship and to enhance their co-operation in tax matters,

Intending to conclude a Convention for the elimination of double taxation with respect to taxes on income and on capital without creating opportunities for non-taxation or reduced taxation through tax evasion or avoidance (including through treaty-shopping arrangements aimed at obtaining reliefs provided in this Convention for the indirect benefit of residents of third States),

Have agreed as follows:

## HISTORY

**The title of the Convention:** Changed on 21 November 2017, by amending the title of the Convention and removing the footnote, by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017 on the basis of another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015. In the 1963 Draft Convention (adopted

MODEL CONVENTION

---

by the OECD Council on 30 July 1963) and until 21 November 2017, the title of the Convention read as follows:

“Convention between (State A) and (State B)  
with respect to taxes on income and on capital”

After 23 July 1992 and until 21 November 2017, the footnote to the title of the Convention read as follows:

“1 States wishing to do so may follow the widespread practice of including in the title a reference to either the avoidance of double taxation or to both the avoidance of double taxation and the prevention of fiscal evasion.”

The footnote to the title of the Convention was added by the report entitled “The Revision of the Model Convention”, adopted by the OECD Council on 23 July 1992.

**Preamble to the Convention:** Changed on 21 November 2017, by amending the preamble to the Convention and removing the footnote, by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015. After 23 July 1992 and until 21 November 2017, the preamble to the Convention and the footnote read as follows:

“Preamble to the Convention<sup>2</sup>

2 The Preamble of the Convention shall be drafted in accordance with the constitutional procedure of both Contracting States.”

The footnote to the preamble to the Convention was redesignated as footnote 2 (from a “Note”) when footnote 1 was added to the title of the Convention by the report entitled “The Revision of the Model Convention”, adopted by the OECD Council on 23 July 1992.

## Chapter I

# SCOPE OF THE CONVENTION

### ARTICLE 1

#### PERSONS COVERED

1. This Convention shall apply to persons who are residents of one or both of the Contracting States.
2. For the purposes of this Convention, income derived by or through an entity or arrangement that is treated as wholly or partly fiscally transparent under the tax law of either Contracting State shall be considered to be income of a resident of a Contracting State but only to the extent that the income is treated, for purposes of taxation by that State, as the income of a resident of that State.
3. This Convention shall not affect the taxation, by a Contracting State, of its residents except with respect to the benefits granted under paragraph 3 of Article 7, paragraph 2 of Article 9 and Articles 19, 20, 23 [A] [B], 24, 25 and 28.

### HISTORY

**The title of Article 1:** Changed on 21 September 1995, by replacing the title “Personal Scope” with “Persons Covered”, by the report entitled “The 1995 Update to the Model Tax Convention”, adopted by the OECD Council on 21 September 1995. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until 21 September 1995, the title of Article 1 read as follows:

“PERSONAL SCOPE”

**Paragraph 1:** Unchanged since the adoption of the 1963 Draft Convention by the OECD Council on 30 July 1963.

**Paragraph 2:** Added on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Neutralising the Effects of Hybrid Mismatch Arrangements, Action 2 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

**Paragraph 3:** Added on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, as a result of follow-up work on another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

ARTICLE 2

TAXES COVERED

1. This Convention shall apply to taxes on income and on capital imposed on behalf of a Contracting State or of its political subdivisions or local authorities, irrespective of the manner in which they are levied.
2. There shall be regarded as taxes on income and on capital all taxes imposed on total income, on total capital, or on elements of income or of capital, including taxes on gains from the alienation of movable or immovable property, taxes on the total amounts of wages or salaries paid by enterprises, as well as taxes on capital appreciation.
3. The existing taxes to which the Convention shall apply are in particular:
- a) (in State A): .....
- b) (in State B): .....
4. The Convention shall apply also to any identical or substantially similar taxes that are imposed after the date of signature of the Convention in addition to, or in place of, the existing taxes. The competent authorities of the Contracting States shall notify each other of any significant changes that have been made in their taxation laws.

HISTORY

**Paragraph 1:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977 by substituting the words “a Contracting State” for “each Contracting State”. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 1 read as follows:

“1. This Convention shall apply to taxes on income and on capital imposed on behalf of each Contracting State or of its political subdivisions or local authorities, irrespective of the manner in which they are levied.”

**Paragraph 2:** Unchanged since the adoption of the 1963 Draft Convention by the OECD Council on 30 July 1963.

**Paragraph 3:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977 by deleting the comma before “in particular” and replacing the words “In the case of (” with “(in” at the beginning of subparagraphs a) and b). In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 3 read as follows:

“3. The existing taxes to which the Convention shall apply are, in particular:

    a) In the case of (State A): .....

    b) In the case of (State B): .....”

**Paragraph 4:** Amended on 29 April 2000 by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000. In the 1977 Convention and until 29 April 2000, paragraph 4 read as follows:

“4. The Convention shall apply also to any identical or substantially similar taxes which are imposed after the date of signature of the Convention in addition to, or in place of, the existing taxes. At the end of each year, the competent authorities of the Contracting States shall notify each other of changes which have been made in their respective taxation laws.”

Paragraph 4 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 4 read as follows:

“4. The Convention shall also apply to any identical or substantially similar taxes which are subsequently imposed in addition to, or in place of, the existing taxes. At the end of each year, the competent authorities of the Contracting States shall notify to each other any changes which have been made in their respective taxation laws.”

## *Chapter II*

# **DEFINITIONS**

### **ARTICLE 3**

### **GENERAL DEFINITIONS**

1. For the purposes of this Convention, unless the context otherwise requires:

- a) the term “person” includes an individual, a company and any other body of persons;
- b) the term “company” means any body corporate or any entity that is treated as a body corporate for tax purposes;
- c) the term “enterprise” applies to the carrying on of any business;
- d) the terms “enterprise of a Contracting State” and “enterprise of the other Contracting State” mean respectively an enterprise carried on by a resident of a Contracting State and an enterprise carried on by a resident of the other Contracting State;
- e) the term “international traffic” means any transport by a ship or aircraft except when the ship or aircraft is operated solely between places in a Contracting State and the enterprise that operates the ship or aircraft is not an enterprise of that State;
- f) the term “competent authority” means:
  - (i) (in State A): .....
  - (ii) (in State B): .....
- g) the term “national”, in relation to a Contracting State, means:
  - (i) any individual possessing the nationality or citizenship of that Contracting State; and
  - (ii) any legal person, partnership or association deriving its status as such from the laws in force in that Contracting State;
- h) the term “business” includes the performance of professional services and of other activities of an independent character.
- i) the term “recognised pension fund” of a State means an entity or arrangement established in that State that is treated as a separate person under the taxation laws of that State and:
  - (i) that is established and operated exclusively or almost exclusively to administer or provide retirement benefits and ancillary or incidental

benefits to individuals and that is regulated as such by that State or one of its political subdivisions or local authorities; or

- (ii) that is established and operated exclusively or almost exclusively to invest funds for the benefit of entities or arrangements referred to in subdivision (i).

2. As regards the application of the Convention at any time by a Contracting State, any term not defined therein shall, unless the context otherwise requires or the competent authorities agree to a different meaning pursuant to the provisions of Article 25, have the meaning that it has at that time under the law of that State for the purposes of the taxes to which the Convention applies, any meaning under the applicable tax laws of that State prevailing over a meaning given to the term under other laws of that State.

## HISTORY

**Paragraph 1:** The preamble of paragraph 1 was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977 by replacing the words “In this Convention” with “For the purposes of this Convention”. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, the preamble of paragraph 1 read as follows:

“1. In this Convention, unless the context otherwise requires:”

**Subparagraph a):** Corresponds to subparagraph b) of the 1963 Draft Convention. On 11 April 1977 subparagraph a) of the 1963 Draft Convention was deleted and subparagraph b) was redesignated as subparagraph a) and amended, by replacing the word “comprises” with “includes”, when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, Subparagraphs a) and b) of paragraph 1 read as follows:

- a) the terms “a Contracting State” and “the other Contracting State” mean (State A) or (State B), as the context requires;
- b) the term “person” comprises an individual, a company and any other body of persons;”

**Subparagraph b):** Amended on 21 September 1995, by replacing the words “entity which” with “entity that”, by the report entitled “The 1995 Update to the Model Tax Convention”, adopted by the OECD Council on 21 September 1995. In the 1977 Model Convention and until 21 September 1995, subparagraph b) of paragraph 1 read as follows:

- b) the term “company” means any body corporate or any entity which is treated as a body corporate for tax purposes;”

Subparagraph b) of the 1977 Model Convention corresponded to subparagraph c) of the 1963 Draft Convention. Subparagraph b) of the 1963 Draft Convention was amended and redesignated as subparagraph a) (see history of subparagraph a) above) and subparagraph c) of the 1963 Draft Convention was redesignated as subparagraph b) when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977.

**Subparagraph c):** Replaced on 29 April 2000, when it was redesignated as subparagraph d) (see history of subparagraph d) below) and a new subparagraph c) was

added by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000).

**Subparagraph d):** Corresponds to subparagraph c) as it read before 29 April 2000. On that date subparagraph d) of the 1977 Model Convention was redesignated as subparagraph e) (see history of subparagraph e) below) and subparagraph c) of the 1977 Model Convention was redesignated as subparagraph d) by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000.

Subparagraph c) of the 1977 Model Convention corresponded to subparagraph d) of the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963), which was redesignated as subparagraph c) when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977.

**Subparagraph e):** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017. After 29 April 2000 and until 21 November 2017, subparagraph e) read as follows:

- “e) the term “international traffic” means any transport by a ship or aircraft operated by an enterprise that has its place of effective management in a Contracting State, except when the ship or aircraft is operated solely between places in the other Contracting State;”

Corresponds to subparagraph d) as it read before 29 April 2000. On that date, subparagraph e) was redesignated as subparagraph f) (see history of subparagraph f) below) and subparagraph d) was redesignated as subparagraph e), by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000.

Subparagraph d) of the 1977 Model Convention was amended on 21 September 1995, by replacing the words “enterprise which” with the words “enterprise that”, by the report entitled “The 1995 Update to the Model Tax Convention”, adopted by the OECD Council on 21 September 1995. In the 1977 Model Convention and until 21 September 1995, subparagraph d) read as follows:

- “d) the term “international traffic” means any transport by a ship or aircraft operated by an enterprise which has its place of effective management in a Contracting State, except when the ship or aircraft is operated solely between places in the other Contracting State;”

Subparagraph d) of the 1963 Draft Convention was replaced when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. At that time, subparagraph d) of the 1963 Draft Convention was redesignated subparagraph c) and a new subparagraph d) was added.

**Subparagraph f):** Corresponds to subparagraph e) as it read before 29 April 2000. On that date, subparagraph f) was redesignated as subparagraph g) (see history of subparagraph g) below) and subparagraph e) was redesignated as subparagraph f) by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000.

Subparagraph e) of the 1963 Draft Convention was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, subparagraph e) read as follows:

“e) the term “competent authority” means:

- (i) (in State A):
- (ii) (in State B):”

**Subparagraph g):** Amended on 28 January 2003 by adding the words “, in relation to a Contracting State” immediately before the word “means”, by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2003. After 29 April 2000 and until 28 January 2003 subparagraph g) read as follows:

“g) the term “national” means:

- (i) any individual possessing the nationality of a Contracting State;
- (ii) any legal person, partnership or association deriving its status as such from the laws in force in a Contracting State;”

Subparagraph g) as it read after 29 April 2000 corresponded to subparagraph f) as it read in the 1977 Model Convention. Subparagraph f) was redesignated as subparagraph g) by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000.

Subparagraph f) as it read after 23 July 1992 corresponded to paragraph 2 of Article 24 of the 1977 Model Convention. On 23 July 1992, paragraph 2 of Article 24 was amended and redesignated as subparagraph f) of paragraph 1 of Article 3 by the report entitled “The Revision of the Model Convention”, adopted by the OECD Council on 23 July 1992. In the 1977 Model Convention and until 23 July 1992, paragraph 2 of Article 24 read as follows:

“2. The term “nationals” means:

- a) all individuals possessing the nationality of a Contracting State;
- b) all legal persons, partnerships and associations deriving their status as such from the laws in force in a Contracting State.”

Paragraph 2 of Article 24 of the 1977 Model Convention was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, by substituting the word “laws” for “law” in subparagraph b). In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 of Article 24 read as follows:

“2. The term “nationals” means:

- a) all individuals possessing the nationality of a Contracting State;
- b) all legal persons, partnerships and associations deriving their status as such from the law in force in a Contracting State.”

**Subparagraph h):** Added on 29 April 2000 by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000).

**Subparagraph i):** Added on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, as a result of follow-up work on another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

**Paragraph 2:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017. After 21 September 1995 and until 21 November 2017, paragraph 2 read as follows:

MODEL CONVENTION

---

“2. As regards the application of the Convention at any time by a Contracting State, any term not defined therein shall, unless the context otherwise requires, have the meaning that it has at that time under the law of that State for the purposes of the taxes to which the Convention applies, any meaning under the applicable tax laws of that State prevailing over a meaning given to the term under other laws of that State.”

Paragraph 2 was previously amended on 21 September 1995 by the report entitled “The 1995 Update to the Model Tax Convention”, adopted by the OECD Council on 21 September 1995. In the 1977 Model Convention and until 21 September 1995, paragraph 2 read as follows:

“2. As regards the application of the Convention by a Contracting State any term not defined therein shall, unless the context otherwise requires, have the meaning which it has under the law of that State concerning the taxes to which the Convention applies.”

Paragraph 2 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 read as follows:

“2. As regards the application of the Convention by a Contracting State any term not otherwise defined shall, unless the context otherwise requires, have the meaning which it has under the laws of that Contracting State relating to the taxes which are the subject of the Convention.”

## **ARTICLE 4**

### **RESIDENT**

1. For the purposes of this Convention, the term “resident of a Contracting State” means any person who, under the laws of that State, is liable to tax therein by reason of his domicile, residence, place of management or any other criterion of a similar nature, and also includes that State and any political subdivision or local authority thereof as well as a recognised pension fund of that State. This term, however, does not include any person who is liable to tax in that State in respect only of income from sources in that State or capital situated therein.

2. Where by reason of the provisions of paragraph 1 an individual is a resident of both Contracting States, then his status shall be determined as follows:

- a) he shall be deemed to be a resident only of the State in which he has a permanent home available to him; if he has a permanent home available to him in both States, he shall be deemed to be a resident only of the State with which his personal and economic relations are closer (centre of vital interests);
- b) if the State in which he has his centre of vital interests cannot be determined, or if he has not a permanent home available to him in either State, he shall be deemed to be a resident only of the State in which he has an habitual abode;
- c) if he has an habitual abode in both States or in neither of them, he shall be deemed to be a resident only of the State of which he is a national;
- d) if he is a national of both States or of neither of them, the competent authorities of the Contracting States shall settle the question by mutual agreement.

3. Where by reason of the provisions of paragraph 1 a person other than an individual is a resident of both Contracting States, the competent authorities of the Contracting States shall endeavour to determine by mutual agreement the Contracting State of which such person shall be deemed to be a resident for the purposes of the Convention, having regard to its place of effective management, the place where it is incorporated or otherwise constituted and any other relevant factors. In the absence of such agreement, such person shall not be entitled to any relief or exemption from tax provided by this Convention except to the extent and in such manner as may be agreed upon by the competent authorities of the Contracting States.

## HISTORY

**The title of Article 4:** Changed when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, the title of Article 4 read as follows:

### “FISCAL DOMICILE”

**Paragraph 1:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, as a result of follow-up work on another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015. After 21 September 1995 and until 21 November 2017, paragraph 1 read as follows:

“1. For the purposes of this Convention, the term “resident of a Contracting State” means any person who, under the laws of that State, is liable to tax therein by reason of his domicile, residence, place of management or any other criterion of a similar nature, and also includes that State and any political subdivision or local authority thereof. This term, however, does not include any person who is liable to tax in that State in respect only of income from sources in that State or capital situated therein.”

Paragraph 1 was previously amended on 21 September 1995, by adding to the first sentence the words “and also includes that State and any political subdivision or local authority thereof” and by replacing in the second sentence the words “But this term” with “This term, however,” by the report entitled “The 1995 Update to the Model Tax Convention”, adopted by the OECD Council on 21 September 1995. In the 1977 Model Convention and until 21 September 1995, paragraph 1 read as follows:

“1. For the purposes of this Convention, the term “resident of a Contracting State” means any person who, under the laws of that State, is liable to tax therein by reason of his domicile, residence, place of management or any other criterion of a similar nature. But this term does not include any person who is liable to tax in that State in respect only of income from sources in that State or capital situated therein.”

Paragraph 1 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, by the addition of the second sentence. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 1 read as follows:

“1. For the purposes of this Convention, the term “resident of a Contracting State” means any person who, under the law of that State, is liable to taxation therein by reason of his domicile, residence, place of management or any other criterion of a similar nature.”

**Paragraph 2:** Amended on 23 October 1997, by adding the word “only” after the word “resident” in the third line of subparagraph a) to correct an omission that was made when similar changes were made to subparagraphs a), b) and c) as part of the 1995 update (see below), by the report entitled “The 1997 Update to the Model Tax Convention”, adopted by the OECD Council on 23 October 1997. After 21 September 1995 and until 23 October 1997 subparagraph a) of paragraph 2 read as follows:

“a) he shall be deemed to be a resident only of the State in which he has a permanent home available to him; if he has a permanent home available to him in both States, he shall be deemed to be a resident of the State with which his personal and economic relations are closer (centre of vital interests);”

Subparagraphs a), b), and c) were previously amended on 21 September 1995, by adding the word “only” after the word “resident” (except in the third line of subparagraph a)), by the report entitled “The 1995 Update to the Model Tax Convention”, adopted by the OECD Council on 21 September 1995. In the 1977 Model Convention and until 21 September 1995, paragraph 2 read as follows:

“2. Where by reason of the provisions of paragraph 1 an individual is a resident of both Contracting States, then his status shall be determined as follows:

- a) he shall be deemed to be a resident of the State in which he has a permanent home available to him; if he has a permanent home available to him in both States, he shall be deemed to be a resident of the State with which his personal and economic relations are closer (centre of vital interests);
- b) if the State in which he has his centre of vital interests cannot be determined, or if he has not a permanent home available to him in either State, he shall be deemed to be a resident of the State in which he has an habitual abode;
- c) if he has an habitual abode in both States or in neither of them, he shall be deemed to be a resident of the State of which he is a national;
- d) if he is a national of both States or of neither of them, the competent authorities of the Contracting States shall settle the question by mutual agreement.”

Paragraph 2 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 read as follows:

“2. Where by reason of the provisions of paragraph 1 an individual is a resident of both Contracting States, then this case shall be determined in accordance with the following rules:

- a) He shall be deemed to be a resident of the Contracting State in which he has a permanent home available to him. If he has a permanent home available to him in both Contracting States, he shall be deemed to be a resident of the Contracting State with which his personal and economic relations are closest (centre of vital interests);
- b) If the Contracting State in which he has his centre of vital interests cannot be determined, or if he has not a permanent home available to him in either Contracting State, he shall be deemed to be a resident of the Contracting State in which he has an habitual abode;
- c) If he has an habitual abode in both Contracting States or in neither of them, he shall be deemed to be a resident of the Contracting State of which he is a national;
- d) If he is a national of both Contracting States or of neither of them, the competent authorities of the Contracting States shall settle the question by mutual agreement.”

**Paragraph 3:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015. After 21 September 1995 and until 21 November 2017, paragraph 3 read as follows:

MODEL CONVENTION

---

“3. Where by reason of the provisions of paragraphs 1 a person other than an individual is a resident of both Contracting States, then it shall be deemed to be a resident only of the State in which its place of effective management is situated.”

Paragraph 3 was previously amended on 21 September 1995, by adding the word “only” after the words “shall be deemed to be a resident”, by the report entitled “The 1995 Update to the Model Tax Convention”, adopted by the OECD Council on 21 September 1995. In the 1977 Model Convention and until 21 September 1995, paragraph 3 read as follows:

“3. Where by reason of the provisions of paragraph 1 a person other than an individual is a resident of both Contracting States, then it shall be deemed to be a resident of the State in which its place of effective management is situated.”

Paragraph 3 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, by replacing the words “the Contracting State in which” with “the State in which”. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 3 read as follows:

“3. Where by reason of the provisions of paragraph 1 a person other than an individual is a resident of both Contracting States, then it shall be deemed to be a resident of the Contraction State in which its place of effective management is situated.”

## **ARTICLE 5**

### **PERMANENT ESTABLISHMENT**

1. For the purposes of this Convention, the term “permanent establishment” means a fixed place of business through which the business of an enterprise is wholly or partly carried on.

2. The term “permanent establishment” includes especially:

- a) a place of management;
- b) a branch;
- c) an office;
- d) a factory;
- e) a workshop, and
- f) a mine, an oil or gas well, a quarry or any other place of extraction of natural resources.

3. A building site or construction or installation project constitutes a permanent establishment only if it lasts more than twelve months.

4. Notwithstanding the preceding provisions of this Article, the term “permanent establishment” shall be deemed not to include:

- a) the use of facilities solely for the purpose of storage, display or delivery of goods or merchandise belonging to the enterprise;
- b) the maintenance of a stock of goods or merchandise belonging to the enterprise solely for the purpose of storage, display or delivery;
- c) the maintenance of a stock of goods or merchandise belonging to the enterprise solely for the purpose of processing by another enterprise;
- d) the maintenance of a fixed place of business solely for the purpose of purchasing goods or merchandise or of collecting information, for the enterprise;
- e) the maintenance of a fixed place of business solely for the purpose of carrying on, for the enterprise, any other activity;
- f) the maintenance of a fixed place of business solely for any combination of activities mentioned in subparagraphs a) to e),

provided that such activity or, in the case of subparagraph f), the overall activity of the fixed place of business, is of a preparatory or auxiliary character.

4.1 Paragraph 4 shall not apply to a fixed place of business that is used or maintained by an enterprise if the same enterprise or a closely related enterprise carries on business activities at the same place or at another place in the same Contracting State and

- a) that place or other place constitutes a permanent establishment for the enterprise or the closely related enterprise under the provisions of this Article, or
- b) the overall activity resulting from the combination of the activities carried on by the two enterprises at the same place, or by the same enterprise or closely related enterprises at the two places, is not of a preparatory or auxiliary character,

provided that the business activities carried on by the two enterprises at the same place, or by the same enterprise or closely related enterprises at the two places, constitute complementary functions that are part of a cohesive business operation.

5. Notwithstanding the provisions of paragraphs 1 and 2 but subject to the provisions of paragraph 6, where a person is acting in a Contracting State on behalf of an enterprise and, in doing so, habitually concludes contracts, or habitually plays the principal role leading to the conclusion of contracts that are routinely concluded without material modification by the enterprise, and these contracts are

- a) in the name of the enterprise, or
- b) for the transfer of the ownership of, or for the granting of the right to use, property owned by that enterprise or that the enterprise has the right to use, or
- c) for the provision of services by that enterprise,

that enterprise shall be deemed to have a permanent establishment in that State in respect of any activities which that person undertakes for the enterprise, unless the activities of such person are limited to those mentioned in paragraph 4 which, if exercised through a fixed place of business (other than a fixed place of business to which paragraph 4.1 would apply), would not make this fixed place of business a permanent establishment under the provisions of that paragraph.

6. Paragraph 5 shall not apply where the person acting in a Contracting State on behalf of an enterprise of the other Contracting State carries on business in the first-mentioned State as an independent agent and acts for the enterprise in the ordinary course of that business. Where, however, a person acts exclusively or almost exclusively on behalf of one or more enterprises to which it is closely related, that person shall not be considered to be an independent agent within the meaning of this paragraph with respect to any such enterprise.

7. The fact that a company which is a resident of a Contracting State controls or is controlled by a company which is a resident of the other Contracting State, or which carries on business in that other State (whether

through a permanent establishment or otherwise), shall not of itself constitute either company a permanent establishment of the other.

8. For the purposes of this Article, a person or enterprise is closely related to an enterprise if, based on all the relevant facts and circumstances, one has control of the other or both are under the control of the same persons or enterprises. In any case, a person or enterprise shall be considered to be closely related to an enterprise if one possesses directly or indirectly more than 50 per cent of the beneficial interest in the other (or, in the case of a company, more than 50 per cent of the aggregate vote and value of the company's shares or of the beneficial equity interest in the company) or if another person or enterprise possesses directly or indirectly more than 50 per cent of the beneficial interest (or, in the case of a company, more than 50 per cent of the aggregate vote and value of the company's shares or of the beneficial equity interest in the company) in the person and the enterprise or in the two enterprises.

## HISTORY

**Paragraph 1:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, by replacing the words “in which the business of the enterprise” with “through which the business of an enterprise”. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 1 read as follows:

“1. For the purposes of this Convention, the term “permanent establishment” means a fixed place of business in which the business of the enterprise is wholly or partly carried on.”

**Paragraph 2:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, by substituting the words “includes” in the first line for “shall include”. At the same time, the word “and” was added at the end of subparagraph e), subparagraph f) was modified and subparagraph g) was deleted. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 read as follows:

“2. The term “permanent establishment” shall include especially:

- a) a place of management;
- b) a branch;
- c) an office;
- d) a factory;
- e) a workshop, and
- f) a mine, quarry or other place of extraction of natural resources;
- g) a building site or construction or assembly project which exists for more than twelve months.”

**Paragraph 3:** Replaced when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. At that time, paragraph 3 of the 1963 Draft Convention was amended and renumbered as paragraph 4 (see history of paragraph 4) and a new paragraph 3 was added.

**Paragraph 4:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Artificial Avoidance of Permanent Establishment Status, Action 7 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015. In the 1977 Model Convention and until 21 November 2017, paragraph 4 read as follows:

“4. Notwithstanding the preceding provisions of this Article, the term “permanent establishment” shall be deemed not to include:

- a) the use of facilities solely for the purpose of storage, display or delivery of goods or merchandise belonging to the enterprise;
- b) the maintenance of a stock of goods or merchandise belonging to the enterprise solely for the purpose of storage, display or delivery;
- c) the maintenance of a stock of goods or merchandise belonging to the enterprise solely for the purpose of processing by another enterprise;
- d) the maintenance of a fixed place of business solely for the purpose of purchasing goods or merchandise or of collecting information, for the enterprise;
- e) the maintenance of a fixed place of business solely for the purpose of carrying on, for the enterprise, any other activity of a preparatory or auxiliary character;
- f) the maintenance of a fixed place of business solely for any combination of activities mentioned in subparagraphs a) to e), provided that the overall activity of the fixed place of business resulting from this combination is of a preparatory or auxiliary character.”

Paragraph 4 of the 1977 Model Convention corresponded to paragraph 3 of the 1963 Draft Convention. Paragraph 4 of the 1963 Draft Convention was amended and renumbered as paragraph 5 (see history of paragraph 5) when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. At the same time, paragraph 3 was renumbered as paragraph 4 and amended, by modifying its preamble and subparagraph e) and adding subparagraph f). In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 3 read as follows:

“3. The term “permanent establishment” shall not be deemed to include:

- a) the use of facilities solely for the purpose of storage, display or delivery of goods or merchandise belonging to the enterprise;
- b) the maintenance of a stock of goods or merchandise belonging to the enterprise solely for the purpose of storage, display or delivery;
- c) the maintenance of a stock of goods or merchandise belonging to the enterprise solely for the purpose of processing by another enterprise;
- d) the maintenance of a fixed place of business solely for the purpose of purchasing goods or merchandise, or for collecting information, for the enterprise;
- e) the maintenance of a fixed place of business solely for the purpose of advertising, for the supply of information, for scientific research or for similar activities which have a preparatory or auxiliary character, for the enterprise.”

**Paragraph 4.1:** Added on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Artificial Avoidance of Permanent

Establishment Status, Action 7 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

**Paragraph 5:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Artificial Avoidance of Permanent Establishment Status, Action 7 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015. In the 1977 Model Convention and until 21 November 2017, paragraph 5 read as follows:

“5. Notwithstanding the provisions of paragraphs 1 and 2, where a person — other than an agent of an independent status to whom paragraph 6 applies — is acting on behalf of an enterprise and has, and habitually exercises, in a Contracting State an authority to conclude contracts in the name of the enterprise, that enterprise shall be deemed to have a permanent establishment in that State in respect of any activities which that person undertakes for the enterprise, unless the activities of such person are limited to those mentioned in paragraph 4 which, if exercised through a fixed place of business, would not make this fixed place of business a permanent establishment under the provisions of that paragraph.”

Paragraph 5 of the 1977 Model Convention corresponded to paragraph 4 of the 1963 Draft Convention. Paragraph 5 of the 1963 Draft Convention was amended and renumbered as paragraph 6 (see history of paragraph 6) when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. At the same time, paragraph 4 of the 1963 Draft Convention was renumbered as paragraph 5 and amended. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 4 read as follows:

“4. A person acting in a Contracting State on behalf of an enterprise of the other Contracting State — other than an agent of an independent status to whom paragraph 5 applies — shall be deemed to be a permanent establishment in the first-mentioned State if he has, and habitually exercises in that State, an authority to conclude contracts in the name of the enterprise, unless his activities are limited to the purchase of goods or merchandise for the enterprise.”

**Paragraph 6:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Artificial Avoidance of Permanent Establishment Status, Action 7 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015. In the 1977 Model Convention and until 21 November 2017, paragraph 6 read as follows:

“6. An enterprise shall not be deemed to have a permanent establishment in a Contracting State merely because it carries on business in that State through a broker, general commission agent or any other agent of an independent status, provided that such persons are acting in the ordinary course of their business.”

Paragraph 6 of the 1977 Model Convention corresponded to paragraph 5 of the 1963 Draft Convention. Paragraph 6 of the 1963 Draft Convention was renumbered as paragraph 7 (see history of paragraph 7) and paragraph 5 of the 1963 Draft Convention was amended and renumbered as paragraph 6 when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 5 read as follows:

“5. An enterprise of a Contracting State shall not be deemed to have a permanent establishment in the other Contracting State merely because it carries on business in that other State through a broker, general commission agent or any other agent of an independent status, where such persons are acting in the ordinary course of their business.”

MODEL CONVENTION

---

**Paragraph 7:** Corresponds to paragraph 6 of the 1963 Draft Convention as it read before 11 April 1977. On that date, paragraph 6 of the 1963 Draft Convention was renumbered as paragraph 7 when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977.

**Paragraph 8:** Added on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Artificial Avoidance of Permanent Establishment Status, Action 7 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

## *Chapter III*

# TAXATION OF INCOME

## ARTICLE 6

### INCOME FROM IMMOVABLE PROPERTY

1. Income derived by a resident of a Contracting State from immovable property (including income from agriculture or forestry) situated in the other Contracting State may be taxed in that other State.
2. The term “immovable property” shall have the meaning which it has under the law of the Contracting State in which the property in question is situated. The term shall in any case include property accessory to immovable property, livestock and equipment used in agriculture and forestry, rights to which the provisions of general law respecting landed property apply, usufruct of immovable property and rights to variable or fixed payments as consideration for the working of, or the right to work, mineral deposits, sources and other natural resources; ships and aircraft shall not be regarded as immovable property.
3. The provisions of paragraph 1 shall apply to income derived from the direct use, letting, or use in any other form of immovable property.
4. The provisions of paragraphs 1 and 3 shall also apply to the income from immovable property of an enterprise.

## HISTORY

**Paragraph 1:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 1 read as follows:

“1. Income from immovable property may be taxed in the Contracting State in which such property is situated.”

**Paragraph 2:** Amended on 21 November 2017, by removing the reference to “boats”, by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017. In the 1977 Model Convention and until 21 November 2017, paragraph 2 read as follows:

“2. The term “immovable property” shall have the meaning which it has under the law of the Contracting State in which the property in question is situated. The term shall in any case include property accessory to immovable property, livestock and equipment used in agriculture and forestry, rights to which the provisions of general law respecting landed property apply, usufruct of immovable property and rights to variable or fixed payments as consideration for the working of, or the right to work, mineral deposits, sources and other natural resources; ships, boats and aircraft shall not be regarded as immovable property.”

MODEL CONVENTION

---

Paragraph 2 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, by changing the first sentence. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 read as follows:

“2. The term “immovable property” shall be defined in accordance with the law of the Contracting State in which the property in question is situated. The term shall in any case include property accessory to immovable property, livestock and equipment used in agriculture and forestry, rights to which the provisions of general law respecting landed property apply, usufruct of immovable property and rights to variable or fixed payments as consideration for the working of, or the right to work, mineral deposits, sources and other natural resources; ships, boats and aircraft shall not be regarded as immovable property.”

**Paragraph 3:** Unchanged since the adoption of the 1963 Draft Convention by the OECD Council on 30 July 1963.

**Paragraph 4:** Amended on 29 April 2000 by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000). In the 1977 Convention and until 29 April 2000, paragraph 4 read as follows:

“4. The provisions of paragraphs 1 and 3 shall also apply to the income from immovable property of an enterprise and to income from immovable property used for the performance of independent personal services.”

Paragraph 4 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, by substituting the words “independent personal services” for “professional services”. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 4 read as follows:

“4. The provisions of paragraphs 1 and 3 shall also apply to the income from immovable property of an enterprise and to income from immovable property used for the performance of professional services.”

## ARTICLE 7

### BUSINESS PROFITS

1. Profits of an enterprise of a Contracting State shall be taxable only in that State unless the enterprise carries on business in the other Contracting State through a permanent establishment situated therein. If the enterprise carries on business as aforesaid, the profits that are attributable to the permanent establishment in accordance with the provisions of paragraph 2 may be taxed in that other State.
2. For the purposes of this Article and Article [23 A] [23 B], the profits that are attributable in each Contracting State to the permanent establishment referred to in paragraph 1 are the profits it might be expected to make, in particular in its dealings with other parts of the enterprise, if it were a separate and independent enterprise engaged in the same or similar activities under the same or similar conditions, taking into account the functions performed, assets used and risks assumed by the enterprise through the permanent establishment and through the other parts of the enterprise.
3. Where, in accordance with paragraph 2, a Contracting State adjusts the profits that are attributable to a permanent establishment of an enterprise of one of the Contracting States and taxes accordingly profits of the enterprise that have been charged to tax in the other State, the other State shall, to the extent necessary to eliminate double taxation on these profits, make an appropriate adjustment to the amount of the tax charged on those profits. In determining such adjustment, the competent authorities of the Contracting States shall if necessary consult each other.
4. Where profits include items of income which are dealt with separately in other Articles of this Convention, then the provisions of those Articles shall not be affected by the provisions of this Article.

## HISTORY

**Paragraph 1:** Amended on 22 July 2010 by the report entitled “The 2010 Update to the Model Tax Convention”, adopted by the OECD Council on 22 July 2010. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until 22 July 2010, paragraph 1 read as follows:

“1. The profits of an enterprise of a Contracting State shall be taxable only in that State unless the enterprise carries on business in the other Contracting State through a permanent establishment situated therein. If the enterprise carries on business as aforesaid, the profits of the enterprise may be taxed in the other State but only so much of them as is attributable to that permanent establishment.”

**Paragraph 2:** Replaced on 22 July 2010 when paragraph 2 was deleted and a new paragraph 2 was added by the report entitled “The 2010 Update to the Model Tax

Convention”, adopted by the OECD Council on 22 July 2010. In the 1977 Model Convention and until it was deleted on 22 July 2010 paragraph 2 read as follows:

“2. Subject to the provisions of paragraph 3, where an enterprise of a Contracting State carries on business in the other Contracting State through a permanent establishment situated therein, there shall in each Contracting State be attributed to that permanent establishment the profits which it might be expected to make if it were a distinct and separate enterprise engaged in the same or similar activities under the same or similar conditions and dealing wholly independently with the enterprise of which it is a permanent establishment.”

Paragraph 2 was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, by adding the words “Subject to the provisions of paragraph 3” at the beginning of the paragraph. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 read as follows:

“2. Where an enterprise of a Contracting State carries on business in the other Contracting State through a permanent establishment situated therein, there shall in each Contracting State be attributed to that permanent establishment the profits which it might be expected to make if it were a distinct and separate enterprise engaged in the same or similar activities under the same or similar conditions and dealing wholly independently with the enterprise of which it is a permanent establishment.”

**Paragraph 3:** Replaced on 22 July 2010 when paragraph 2 was deleted and a new paragraph 2 was added by the report entitled “The 2010 Update to the Model Tax Convention”, adopted by the OECD Council on 22 July 2010. In the 1977 Model Convention and until 22 July 2010 paragraph 3 read as follows:

“3. In determining the profits of a permanent establishment, there shall be allowed as deductions expenses which are incurred for the purposes of the permanent establishment, including executive and general administrative expenses so incurred, whether in the State in which the permanent establishment is situated or elsewhere.”

Paragraph 3 was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, by substituting the words “In determining” for “In the determination of” at the beginning of the paragraph. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 3 read as follows:

“3. In the determination of the profits of a permanent establishment, there shall be allowed as deductions expenses which are incurred for the purposes of the permanent establishment, including executive and general administrative expenses so incurred, whether in the State in which the permanent establishment is situated or elsewhere.”

**Paragraph 4:** Corresponds to paragraph 7 as it read before 22 July 2010. On that date, paragraph 4, was deleted and paragraph 7 was renumbered as paragraph 4 by the report entitled “The 2010 Update to the Model Tax Convention”, adopted by the OECD Council on 22 July 2010.

Paragraph 7, as it read before 22 July 2010, was included in the 1963 Draft Convention, adopted by the OECD Council on 30 July 1963.

Paragraph 4 of the 1977 Model Convention was deleted on 22 July 2010 by the report entitled “The 2010 Update to the Model Tax Convention”, adopted by the OECD Council on 22 July 2010. In the 1977 Model Tax Convention and until 22 July 2010, paragraph 4 read as follows:

“4. Insofar as it has been customary in a Contracting State to determine the profits to be attributed to a permanent establishment on the basis of an apportionment of the total profits of the enterprise to its various parts, nothing in paragraph 2 shall preclude that Contracting State from determining the profits to be taxed by such an apportionment as may be customary; the method of apportionment adopted shall, however, be such that the result shall be in accordance with the principles contained in this Article.”

Paragraph 4 was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, by substituting the word “contained” in the last line for “laid down”. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 4 read as follows:

“4. Insofar as it has been customary in a Contracting State to determine the profits to be attributed to a permanent establishment on the basis of an apportionment of the total profits of the enterprise to its various parts, nothing in paragraph 2 shall preclude that Contracting State from determining the profits to be taxed by such an apportionment as may be customary; the method of apportionment adopted shall, however, be such that the result shall be in accordance with the principles laid down in this Article.”

**Paragraph 5:** Deleted on 22 July 2010 by the report entitled “The 2010 Update to the Model Tax Convention”, adopted by the OECD Council on 22 July 2010. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until 22 July 2010, paragraph 5 read as follows:

“5. No profits shall be attributed to a permanent establishment by reason of the mere purchase by that permanent establishment of goods or merchandise for the enterprise.”

**Paragraph 6:** Deleted on 22 July 2010 by the report entitled “The 2010 Update to the Model Tax Convention”, adopted by the OECD Council on 22 July 2010. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until 22 July 2010, paragraph 6 read as follows:

“6. For the purposes of the preceding paragraphs, the profits to be attributed to the permanent establishment shall be determined by the same method year by year unless there is good and sufficient reason to the contrary.”

**Paragraph 7:** Renumbered on 22 July 2010 as paragraph 4 (see history of paragraph 4) by the report entitled “The 2010 Update to the Model Tax Convention”, adopted by the OECD Council on 22 July 2010.

## ARTICLE 8

### INTERNATIONAL SHIPPING AND AIR TRANSPORT

1. Profits of an enterprise of a Contracting State from the operation of ships or aircraft in international traffic shall be taxable only in that State.
2. The provisions of paragraph 1 shall also apply to profits from the participation in a pool, a joint business or an international operating agency.

### HISTORY

**The title of Article 8:** Changed on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until 21 November 2017, the title of Article 8 read as follows:

“SHIPPING, INLAND WATERWAYS TRANSPORT AND AIR TRANSPORT”

**Paragraph 1:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017. In the 1963 Draft Convention and until 21 November 2017, paragraph 1 read as follows:

“1. Profits from the operation of ships or aircraft in international traffic shall be taxable only in the Contracting State in which the place of effective management of the enterprise is situated.”

Paragraph 1 was included in the 1963 Draft Convention, adopted by the OECD Council on 30 July 1963.

**Paragraph 2:** Corresponds to paragraph 4 as it read before 21 November 2017. On that date, paragraph 2 was deleted and paragraph 4 was renumbered as paragraph 2, by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017.

Paragraph 4 was included in the 1963 Draft Convention, adopted by the OECD Council on 30 July 1963.

Paragraph 2, as it read before 21 November 2017, was deleted by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017. In the 1963 Draft Convention and until 21 November 2017, paragraph 2 read as follows:

“2. Profits from the operation of boats engaged in inland waterways transport shall be taxable only in the Contracting State in which the place of effective management of the enterprise is situated.”

Paragraph 2 was included in the 1963 Draft Convention, adopted by the OECD Council on 30 July 1963.

**Paragraph 3:** Deleted on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017. In the 1963 Draft Convention and until 21 November 2017, paragraph 3 read as follows:

“3. If the place of effective management of a shipping enterprise or of an inland waterways transport enterprise is aboard a ship or boat, then it shall be deemed to be situated in the Contracting State in which the home harbour of the ship or boat is situated, or, if there is no such home harbour, in the Contracting State of which the operator of the ship or boat is a resident.”

Paragraph 3 was included in the 1963 Draft Convention, adopted by the OECD Council on 30 July 1963.

**Paragraph 4:** Renumbered as paragraph 2 (see history of paragraph 2) on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017.

## ARTICLE 9

### ASSOCIATED ENTERPRISES

1. Where

- a) an enterprise of a Contracting State participates directly or indirectly in the management, control or capital of an enterprise of the other Contracting State, or
- b) the same persons participate directly or indirectly in the management, control or capital of an enterprise of a Contracting State and an enterprise of the other Contracting State,

and in either case conditions are made or imposed between the two enterprises in their commercial or financial relations which differ from those which would be made between independent enterprises, then any profits which would, but for those conditions, have accrued to one of the enterprises, but, by reason of those conditions, have not so accrued, may be included in the profits of that enterprise and taxed accordingly.

2. Where a Contracting State includes in the profits of an enterprise of that State — and taxes accordingly — profits on which an enterprise of the other Contracting State has been charged to tax in that other State and the profits so included are profits which would have accrued to the enterprise of the first-mentioned State if the conditions made between the two enterprises had been those which would have been made between independent enterprises, then that other State shall make an appropriate adjustment to the amount of the tax charged therein on those profits. In determining such adjustment, due regard shall be had to the other provisions of this Convention and the competent authorities of the Contracting States shall if necessary consult each other.

## HISTORY

**Paragraph 1:** Corresponds to Article 9 of the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963). Article 9 was designated as paragraph 1 in the 1977 Model Convention, adopted by the OECD Council on 11 April 1977.

**Paragraph 2:** Added when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977.

## ARTICLE 10

### DIVIDENDS

1. Dividends paid by a company which is a resident of a Contracting State to a resident of the other Contracting State may be taxed in that other State.

2. However, dividends paid by a company which is a resident of a Contracting State may also be taxed in that State according to the laws of that State, but if the beneficial owner of the dividends is a resident of the other Contracting State, the tax so charged shall not exceed:

a) 5 per cent of the gross amount of the dividends if the beneficial owner is a company which holds directly at least 25 per cent of the capital of the company paying the dividends throughout a 365 day period that includes the day of the payment of the dividend (for the purpose of computing that period, no account shall be taken of changes of ownership that would directly result from a corporate reorganisation, such as a merger or divisive reorganisation, of the company that holds the shares or that pays the dividend);

b) 15 per cent of the gross amount of the dividends in all other cases.

The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of these limitations. This paragraph shall not affect the taxation of the company in respect of the profits out of which the dividends are paid.

3. The term “dividends” as used in this Article means income from shares, “jouissance” shares or “jouissance” rights, mining shares, founders’ shares or other rights, not being debt-claims, participating in profits, as well as income from other corporate rights which is subjected to the same taxation treatment as income from shares by the laws of the State of which the company making the distribution is a resident.

4. The provisions of paragraphs 1 and 2 shall not apply if the beneficial owner of the dividends, being a resident of a Contracting State, carries on business in the other Contracting State of which the company paying the dividends is a resident through a permanent establishment situated therein and the holding in respect of which the dividends are paid is effectively connected with such permanent establishment. In such case the provisions of Article 7 shall apply.

5. Where a company which is a resident of a Contracting State derives profits or income from the other Contracting State, that other State may not impose any tax on the dividends paid by the company, except insofar as such dividends are paid to a resident of that other State or insofar as the holding in respect of which the dividends are paid is effectively connected with a

permanent establishment situated in that other State, nor subject the company's undistributed profits to a tax on the company's undistributed profits, even if the dividends paid or the undistributed profits consist wholly or partly of profits or income arising in such other State.

## HISTORY

**Paragraph 1:** Unchanged since the adoption of the 1963 Draft Convention by the OECD Council on 30 July 1963.

**Paragraph 2:** Amended on 21 November 2017 by the report entitled "The 2017 Update to the Model Tax Convention", adopted by the OECD Council on 21 November 2017, on the basis of another report entitled "Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report", endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015. After 15 July 2014 and until 21 November 2017, paragraph 2 read as follows:

"2. However, dividends paid by a company which is a resident of a Contracting State may also be taxed in that State according to the laws of that State, but if the beneficial owner of the dividends is a resident of the other Contracting State, the tax so charged shall not exceed:

- a) 5 per cent of the gross amount of the dividends if the beneficial owner is a company (other than a partnership) which holds directly at least 25 per cent of the capital of the company paying the dividends;
- b) 15 per cent of the gross amount of the dividends in all other cases.

The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of these limitations. This paragraph shall not affect the taxation of the company in respect of the profits out of which the dividends are paid."

Paragraph 2 was previously amended on 15 July 2014 by the report entitled "The 2014 Update to the Model Tax Convention", adopted by the OECD Council on 15 July 2014. After 21 September 1995 and until 15 July 2014, paragraph 2 read as follows:

"2. However, such dividends may also be taxed in the Contracting State of which the company paying the dividends is a resident and according to the laws of that State, but if the beneficial owner of the dividends is a resident of the other Contracting State, the tax so charged shall not exceed:

- a) 5 per cent of the gross amount of the dividends if the beneficial owner is a company (other than a partnership) which holds directly at least 25 per cent of the capital of the company paying the dividends;
- b) 15 per cent of the gross amount of the dividends in all other cases.

The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of these limitations. This paragraph shall not affect the taxation of the company in respect of the profits out of which the dividends are paid."

Paragraph 2 was previously amended on 21 September 1995, by replacing the words "if the recipient is the beneficial owner of the dividends" with "if the beneficial owner of the dividends is a resident of the other Contracting State," by the report entitled "The 1995 Update to the Model Tax Convention", adopted by the OECD Council on 21 September 1995. In the 1977 Model Convention and until 21 September 1995, paragraph 2 read as follows:

“2. However, such dividends may also be taxed in the Contracting State of which the company paying the dividends is a resident and according to the laws of that State, but if the recipient is the beneficial owner of the dividends the tax so charged shall not exceed:

- a) 5 per cent of the gross amount of the dividends if the beneficial owner is a company (other than a partnership) which holds directly at least 25 per cent of the capital of the company paying the dividends;
- b) 15 per cent of the gross amount of the dividends in all other cases.

The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of these limitations. This paragraph shall not affect the taxation of the company in respect of the profits out of which the dividends are paid.”

Paragraph 2 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 read as follows:

“2. However, such dividends may be taxed in the Contracting State of which the company paying the dividends is a resident, and according to the law of that State, but the tax so charged shall not exceed:

- a) 5 per cent of the gross amount of the dividends if the recipient is a company (excluding partnership) which holds directly at least 25 per cent of the capital of the company paying the dividends;
- b) in all other cases, 15 per cent of the gross amount of the dividends.

The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of this limitation. This paragraph shall not affect the taxation of the company in respect of the profits out of which the dividends are paid.”

**Paragraph 3:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, by substituting the words “which is subjected to the same taxation treatment as income from shares by the laws of the State” for “assimilated to income from shares by the taxation law of the State”. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 3 read as follows:

“3. The term “dividends” as used in this Article means income from shares, “jouissance” shares or “jouissance” rights, mining shares, founders’ shares or other rights, not being debt-claims, participating in profits, as well as income from other corporate rights assimilated to income from shares by the taxation law of the State of which the company making the distribution is a resident.”

**Paragraph 4:** Amended on 29 April 2000 by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000). In the 1977 Convention and until 29 April 2000, paragraph 4 read as follows:

“4. The provisions of paragraphs 1 and 2 shall not apply if the beneficial owner of the dividends, being a resident of a Contracting State, carries on business in the other Contracting State of which the company paying the dividends is a resident, through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the holding in respect of which the dividends are paid is effectively connected with

MODEL CONVENTION

---

such permanent establishment or fixed base. In such case the provisions of Article 7 or Article 14, as the case may be, shall apply.”

Paragraph 4 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 4 read as follows:

“4. The provisions of paragraphs 1 and 2 shall not apply if the recipient of the dividends, being a resident of a Contracting State, has in the other Contracting State, of which the company paying the dividends is a resident, a permanent establishment with which the holding by virtue of which the dividends are paid is effectively connected. In such a case, the provisions of Article 7 shall apply.”

**Paragraph 5:** Amended on 29 April 2000 by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000). In the 1977 Convention and until 29 April 2000, paragraph 5 read as follows:

“5. Where a company which is a resident of a Contracting State derives profits or income from the other Contracting State, that other State may not impose any tax on the dividends paid by the company, except insofar as such dividends are paid to a resident of that other State or insofar as the holding in respect of which the dividends are paid is effectively connected with a permanent establishment or a fixed base situated in that other State, nor subject the company's undistributed profits to a tax on the company's undistributed profits, even if the dividends paid or the undistributed profits consist wholly or partly of profits or income arising in such other State.”

Paragraph 5 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 5 read as follows:

“5. Where a company which is a resident of a Contracting State derives profits or income from the other Contracting State, that other State may not impose any tax on the dividends paid by the company to persons who are not residents of that other State, or subject the company's undistributed profits to a tax on undistributed profits, even if the dividends paid or the undistributed profits consist wholly or partly of profits or income arising in such other State.”

## **ARTICLE 11**

### **INTEREST**

1. Interest arising in a Contracting State and paid to a resident of the other Contracting State may be taxed in that other State.
2. However, interest arising in a Contracting State may also be taxed in that State according to the laws of that State, but if the beneficial owner of the interest is a resident of the other Contracting State, the tax so charged shall not exceed 10 per cent of the gross amount of the interest. The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of this limitation.
3. The term “interest” as used in this Article means income from debt-claims of every kind, whether or not secured by mortgage and whether or not carrying a right to participate in the debtor’s profits, and in particular, income from government securities and income from bonds or debentures, including premiums and prizes attaching to such securities, bonds or debentures. Penalty charges for late payment shall not be regarded as interest for the purpose of this Article.
4. The provisions of paragraphs 1 and 2 shall not apply if the beneficial owner of the interest, being a resident of a Contracting State, carries on business in the other Contracting State in which the interest arises through a permanent establishment situated therein and the debt-claim in respect of which the interest is paid is effectively connected with such permanent establishment. In such case the provisions of Article 7 shall apply.
5. Interest shall be deemed to arise in a Contracting State when the payer is a resident of that State. Where, however, the person paying the interest, whether he is a resident of a Contracting State or not, has in a Contracting State a permanent establishment in connection with which the indebtedness on which the interest is paid was incurred, and such interest is borne by such permanent establishment, then such interest shall be deemed to arise in the State in which the permanent establishment is situated.
6. Where, by reason of a special relationship between the payer and the beneficial owner or between both of them and some other person, the amount of the interest, having regard to the debt-claim for which it is paid, exceeds the amount which would have been agreed upon by the payer and the beneficial owner in the absence of such relationship, the provisions of this Article shall apply only to the last-mentioned amount. In such case, the excess part of the payments shall remain taxable according to the laws of each Contracting State, due regard being had to the other provisions of this Convention.

## HISTORY

**Paragraph 1:** Unchanged since the adoption of the 1963 Draft Convention by the OECD Council on 30 July 1963.

**Paragraph 2:** Amended on 15 July 2014 by the report entitled “The 2014 Update to the Model Tax Convention”, adopted by the OECD Council on 15 July 2014. After 21 September 1995 and until 15 July 2014, paragraph 2 read as follows:

“2. However, such interest may also be taxed in the Contracting State in which it arises and according to the laws of that State, but if the beneficial owner of the interest is a resident of the other Contracting State, the tax so charged shall not exceed 10 per cent of the gross amount of the interest. The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of this limitation.”

Paragraph 2 was previously amended on 21 September 1995, by replacing the words “if the recipient is the beneficial owner of the interest” with “if the beneficial owner of the interest is a resident of the other Contracting State,” by the report entitled “The 1995 Update to the Model Tax Convention”, adopted by the OECD Council on 21 September 1995. In the 1977 Model Convention and until 21 September 1995, paragraph 2 read as follows:

“2. However, such interest may also be taxed in the Contracting State in which it arises and according to the laws of that State, but if the recipient is the beneficial owner of the interest the tax so charged shall not exceed 10 per cent of the gross amount of the interest. The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of this limitation.”

Paragraph 2 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 read as follows:

“2. However, such interest may be taxed in the Contracting State in which it arises, and according to the law of that State, but the tax so charged shall not exceed 10 per cent of the amount of the interest. The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of this limitation.”

**Paragraph 3:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 3 read as follows:

“3. The term “interest” as used in this Article means income from Government securities, bonds or debentures, whether or not secured by mortgage and whether or not carrying a right to participate in profits, and debt-claims of every kind as well as all other income assimilated to income from money lent by the taxation law of the State in which the income arises.”

**Paragraph 4:** Amended on 29 April 2000 by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000). In the 1977 Convention and until 29 April 2000, paragraph 4 read as follows:

“4. The provisions of paragraphs 1 and 2 shall not apply if the beneficial owner of the interest, being a resident of a Contracting State, carries on business in the other Contracting State in which the interest arises, through a permanent

establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the debt-claim in respect of which the interest is paid is effectively connected with such permanent establishment or fixed base. In such case the provisions of Article 7 or Article 14, as the case may be, shall apply.”

Paragraph 4 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 4 read as follows:

“4. The provisions of paragraphs 1 and 2 shall not apply if the recipient of the interest, being a resident of a Contracting State, has in the other Contracting State in which the interest arises a permanent establishment with which the debt-claim from which the interest arises is effectively connected. In such a case, the provisions of Article 7 shall apply.”

**Paragraph 5:** Amended on 29 April 2000 by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000). After 21 September 1995 and until 29 April 2000, paragraph 5 read as follows:

“5. Interest shall be deemed to arise in a Contracting State when the payer is a resident of that State. Where, however, the person paying the interest, whether he is a resident of a Contracting State or not, has in a Contracting State a permanent establishment or a fixed base in connection with which the indebtedness on which the interest is paid was incurred, and such interest is borne by such permanent establishment or fixed base, then such interest shall be deemed to arise in the State in which the permanent establishment or fixed base is situated.”

Paragraph 5 was previously amended on 21 September 1995, by deleting the words “that State itself, a political subdivision, a local authority or”, by the report entitled “The 1995 Update to the Model Tax Convention”, adopted by the OECD Council on 21 September 1995. In the 1977 Model Convention and until 21 September 1995, paragraph 5 read as follows:

“5. Interest shall be deemed to arise in a Contracting State when the payer is that State itself, a political subdivision, a local authority or a resident of that State. Where, however, the person paying the interest, whether he is a resident of a Contracting State or not, has in a Contracting State a permanent establishment or a fixed base in connection with which the indebtedness on which the interest is paid was incurred, and such interest is borne by such permanent establishment or fixed base, then such interest shall be deemed to arise in the State in which the permanent establishment or fixed base is situated.”

Paragraph 5 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, by substituting “permanent establishment or fixed base” for “permanent establishment” in the three different places where these words appeared. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 5 read as follows:

“5. Interest shall be deemed to arise in a Contracting State when the payer is that State itself, a political subdivision, a local authority or a resident of that State. Where, however, the person paying the interest, whether he is a resident of a Contracting State or not, has in a Contracting State a permanent establishment in connection with which the indebtedness on which the interest is paid was incurred, and such interest is borne by such permanent establishment, then such

MODEL CONVENTION

---

interest shall be deemed to arise in the State in which the permanent establishment is situated.”

**Paragraph 6:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 6 read as follows:

“6. Where, owing to a special relationship between the payer and the recipient or between both of them and some other person, the amount of the interest paid, having regard to the debt claim for which it is paid, exceeds the amount which would have been agreed upon by the payer and the recipient in the absence of such relationship, the provisions of this Article shall apply only to the last-mentioned amount. In that case, the excess part of the payments shall remain taxable according to the law of each Contracting State, due regard being had to the other provisions of this Convention.”

## ARTICLE 12

### ROYALTIES

1. Royalties arising in a Contracting State and beneficially owned by a resident of the other Contracting State shall be taxable only in that other State.
2. The term “royalties” as used in this Article means payments of any kind received as a consideration for the use of, or the right to use, any copyright of literary, artistic or scientific work including cinematograph films, any patent, trade mark, design or model, plan, secret formula or process, or for information concerning industrial, commercial or scientific experience.
3. The provisions of paragraph 1 shall not apply if the beneficial owner of the royalties, being a resident of a Contracting State, carries on business in the other Contracting State in which the royalties arise through a permanent establishment situated therein and the right or property in respect of which the royalties are paid is effectively connected with such permanent establishment. In such case the provisions of Article 7 shall apply.
4. Where, by reason of a special relationship between the payer and the beneficial owner or between both of them and some other person, the amount of the royalties, having regard to the use, right or information for which they are paid, exceeds the amount which would have been agreed upon by the payer and the beneficial owner in the absence of such relationship, the provisions of this Article shall apply only to the last-mentioned amount. In such case, the excess part of the payments shall remain taxable according to the laws of each Contracting State, due regard being had to the other provisions of this Convention.

## HISTORY

**Paragraph 1:** Amended on 23 October 1997 by the report entitled “The 1997 Update to the Model Tax Convention”, adopted by the OECD Council on 23 October 1997. In the 1977 Model Convention and until 23 October 1997, paragraph 1 read as follows:

- “1. Royalties arising in a Contracting State and paid to a resident of the other Contracting State shall be taxable only in that other State if such resident is the beneficial owner of the royalties.”

Paragraph 1 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 1 read as follows:

- “1. Royalties arising in a Contracting State and paid to a resident of the other Contracting State shall be taxable only in that other State.”

**Paragraph 2:** Amended on 23 July 1992, by deleting the words “or for the use of, or the right to use, industrial, commercial or scientific equipment”, by the report entitled “The Revision of the Model Convention”, adopted by the OECD Council on 23 July 1992, on the basis of paragraph 23 of the report entitled “The Taxation of Income Derived

from the Leasing of Industrial, Commercial or Scientific Equipment” (adopted by the OECD Council on 13 September 1983). In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until 23 July 1992, paragraph 2 read as follows:

“2. The term “royalties” as used in this Article means payments of any kind received as a consideration for the use of, or the right to use, any copyright of literary, artistic or scientific work including cinematograph films, any patent, trade mark, design or model, plan, secret formula or process, or for the use of, or the right to use, industrial, commercial, or scientific equipment, or for information concerning industrial, commercial or scientific experience.”

**Paragraph 3:** Amended on 29 April 2000 by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000). In the 1977 Convention and until 29 April 2000, paragraph 3 read as follows:

“3. The provisions of paragraph 1 shall not apply if the beneficial owner of the royalties, being a resident of a Contracting State, carries on business in the other Contracting State in which the royalties arise, through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the right or property in respect of which the royalties are paid is effectively connected with such permanent establishment or fixed base. In such case the provisions of Article 7 or Article 14, as the case may be, shall apply.”

Paragraph 3 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 3 read as follows:

“3. The provisions of paragraph 1 shall not apply if the recipient of the royalties, being a resident of a Contracting State, has in the other Contracting State in which the royalties arise a permanent establishment with which the right or property giving rise to the royalties is effectively connected. In such a case, the provisions of Article 7 shall apply.”

**Paragraph 4:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 4 read as follows:

“4. Where, owing to a special relationship between the payer and the recipient or between both of them and some other person, the amount of the royalties paid, having regard to the use, right or information for which they are paid, exceeds the amount which would have been agreed upon by the payer and the recipient in the absence of such relationship, the provisions of this Article shall apply only to the last-mentioned amount. In that case, the excess part of the payments shall remain taxable according to the law of each Contracting State, due regard being had to the other provisions of this Convention.”

## ARTICLE 13

### CAPITAL GAINS

1. Gains derived by a resident of a Contracting State from the alienation of immovable property referred to in Article 6 and situated in the other Contracting State may be taxed in that other State.
2. Gains from the alienation of movable property forming part of the business property of a permanent establishment which an enterprise of a Contracting State has in the other Contracting State, including such gains from the alienation of such a permanent establishment (alone or with the whole enterprise), may be taxed in that other State.
3. Gains that an enterprise of a Contracting State that operates ships or aircraft in international traffic derives from the alienation of such ships or aircraft, or of movable property pertaining to the operation of such ships or aircraft, shall be taxable only in that State.
4. Gains derived by a resident of a Contracting State from the alienation of shares or comparable interests, such as interests in a partnership or trust, may be taxed in the other Contracting State if, at any time during the 365 days preceding the alienation, these shares or comparable interests derived more than 50 per cent of their value directly or indirectly from immovable property, as defined in Article 6, situated in that other State.
5. Gains from the alienation of any property, other than that referred to in paragraphs 1, 2, 3 and 4, shall be taxable only in the Contracting State of which the alienator is a resident.

## HISTORY

**Paragraph 1:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 1 read as follows:

- “1. Gains from the alienation of immovable property, as defined in paragraph 2 of Article 6, may be taxed in the Contracting State in which such property is situated.”

**Paragraph 2:** Amended on 29 April 2000 by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000). In the 1977 Convention and until 29 April 2000, paragraph 2 read as follows:

- “2. Gains from the alienation of movable property forming part of the business property of a permanent establishment which an enterprise of a Contracting State has in the other Contracting State or of movable property pertaining to a fixed base available to a resident of a Contracting State in the other Contracting State for the

MODEL CONVENTION

---

purpose of performing independent personal services, including such gains from the alienation of such a permanent establishment (alone or with the whole enterprise) or of such fixed base, may be taxed in that other State.”

Paragraph 2 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977 by replacing the word “professional” with “independent personal” and by deleting the last sentence (the principle of which was been taken up in paragraph 3). In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 read as follows:

“2. Gains from the alienation of movable property forming part of the business property of a permanent establishment which an enterprise of a Contracting State has in the other Contracting State or of movable property pertaining to a fixed base available to a resident of a Contracting State in the other Contracting State for the purpose of performing professional services, including such gains from the alienation of such a permanent establishment (alone or together with the whole enterprise) or of such a fixed base, may be taxed in the other State. However, gains from the alienation of movable property of the kind referred to in paragraph 3 of Article 22 shall be taxable only in the Contracting State in which such movable property is taxable according to the said Article.”

**Paragraph 3:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017. In the 1977 Model Convention and until 21 November 2017, paragraph 3 read as follows:

“3. Gains from the alienation of ships or aircraft operated in international traffic, boats engaged in inland waterways transport or movable property pertaining to the operation of such ships, aircraft or boats, shall be taxable only in the Contracting State in which the place of effective management of the enterprise is situated.”

Paragraph 3 was added when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977; it corresponds generally to the last sentence of paragraph 2 of the 1963 Draft Convention.

**Paragraph 4:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015. After 28 January 2003 and until 21 November 2017, paragraph 4 read as follows:

“4. Gains derived by a resident of a Contracting State from the alienation of shares deriving more than 50 per cent of their value directly or indirectly from immovable property situated in the other Contracting State may be taxed in that other State.”

Paragraph 4 was replaced on 28 January 2003 when paragraph 4 was amended and renumbered as paragraph 5 (see history of paragraph 5) and a new paragraph 4 was added by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2003.

**Paragraph 5:** Corresponds to paragraph 4 of the 1977 Model Convention as it read before 28 January 2003. On that date, paragraph 4 was amended and renumbered as paragraph 5 by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2003. In the 1977 Model Convention and until 28 January 2003, paragraph 4 read as follows:

“4. Gains from the alienation of any property other than that referred to in paragraphs 1, 2 and 3, shall be taxable only in the Contracting State of which the alienator is a resident.”

Paragraph 4 corresponded to paragraph 3 of the 1963 Draft Convention. Paragraph 3 was amended and renumbered as paragraph 4 when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 3 read as follows:

“3. Gains from the alienation of any property other than those mentioned in paragraphs 1 and 2, shall be taxable only in the Contracting State of which the alienator is a resident.”

## [ ARTICLE 14 - INDEPENDENT PERSONAL SERVICES ]

[DELETED]

### HISTORY

Article 14 was deleted by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000). In the 1977 Model Convention and until 29 April 2000, Article 14 read as follows:

#### “INDEPENDENT PERSONAL SERVICES

1. Income derived by a resident of a Contracting State in respect of professional services or other activities of an independent character shall be taxable only in that State unless he has a fixed base regularly available to him in the other Contracting State for the purpose of performing his activities. If he has such a fixed base, the income may be taxed in the other State but only so much of it as is attributable to that fixed base.
2. The term “professional services” includes especially independent scientific, literary, artistic, educational or teaching activities as well as the independent activities of physicians, lawyers, engineers, architects, dentists and accountants.

#### Paragraph 1

Before it was deleted on 29 April 2000, paragraph 1 was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 1 read as follows:

- “1. Income derived by a resident of a Contracting State in respect of professional services or other independent activities of a similar character shall be taxable only in that State unless he has a fixed base regularly available to him in the other Contracting State for the purpose of performing his activities. If he has such a fixed base, the income may be taxed in the other Contracting State but only so much of it as is attributable to that fixed base.”

#### Paragraph 2

Before it was deleted on 29 April 2000, paragraph 2 was unchanged since the adoption of the 1963 Draft Convention by the OECD Council on 30 July 1963.”

## ARTICLE 15

### INCOME FROM EMPLOYMENT

1. Subject to the provisions of Articles 16, 18 and 19, salaries, wages and other similar remuneration derived by a resident of a Contracting State in respect of an employment shall be taxable only in that State unless the employment is exercised in the other Contracting State. If the employment is so exercised, such remuneration as is derived therefrom may be taxed in that other State.
2. Notwithstanding the provisions of paragraph 1, remuneration derived by a resident of a Contracting State in respect of an employment exercised in the other Contracting State shall be taxable only in the first-mentioned State if:
  - a) the recipient is present in the other State for a period or periods not exceeding in the aggregate 183 days in any twelve month period commencing or ending in the fiscal year concerned, and
  - b) the remuneration is paid by, or on behalf of, an employer who is not a resident of the other State, and
  - c) the remuneration is not borne by a permanent establishment which the employer has in the other State.
3. Notwithstanding the preceding provisions of this Article, remuneration derived by a resident of a Contracting State in respect of an employment, as a member of the regular complement of a ship or aircraft, that is exercised aboard a ship or aircraft operated in international traffic, other than aboard a ship or aircraft operated solely within the other Contracting State, shall be taxable only in the first-mentioned State.

## HISTORY

**The title of Article 15:** Amended by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000). In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until 29 April 2000, the title of Article 15 read as follows:

“DEPENDENT PERSONAL SERVICES”

**Paragraph 1:** Unchanged since the adoption of the 1963 Draft Convention by the OECD Council on 30 July 1963.

**Paragraph 2:** Amended on 29 April 2000, by deleting the words “or a fixed base” in subparagraph c), by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on

MODEL CONVENTION

---

27 January 2000). After 23 July 1992 and until 29 April 2000, paragraph 2 read as follows:

“2. Notwithstanding the provisions of paragraph 1, remuneration derived by a resident of a Contracting State in respect of an employment exercised in the other Contracting State shall be taxable only in the first-mentioned State if:

- a) the recipient is present in the other State for a period or periods not exceeding in the aggregate 183 days in any twelve month period commencing or ending in the fiscal year concerned, and
- b) the remuneration is paid by, or on behalf of, an employer who is not a resident of the other State, and
- c) the remuneration is not borne by a permanent establishment or a fixed base which the employer has in the other State.”

Paragraph 2 was previously amended on 23 July 1992, by adding the words “in any twelve month period commencing or ending” to subparagraph a), by the report entitled “The Revision of the Model Convention”, adopted by the OECD Council on 23 July 1992, on the basis of paragraph 80 of the report entitled “Taxation Issues Relating to the International Hiring-out of Labour” (adopted by the OECD Council on 24 August 1984). In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until 23 July 1992, paragraph 2 read as follows:

“2. Notwithstanding the provisions of paragraph 1, remuneration derived by a resident of a Contracting State in respect of an employment exercised in the other Contracting State shall be taxable only in the first-mentioned State if:

- a) the recipient is present in the other State for a period or periods not exceeding in the aggregate 183 days in the fiscal year concerned, and.
- b) the remuneration is paid by, or on behalf of, an employer who is not a resident of the other State, and
- c) the remuneration is not borne by a permanent establishment or a fixed base which the employer has in the other State.”

**Paragraph 3:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017. In the 1977 Model Convention and until 21 November 2017, paragraph 3 read as follows:

“3. Notwithstanding the preceding provisions of this Article, remuneration derived in respect of an employment exercised aboard a ship or aircraft operated in international traffic, or aboard a boat engaged in inland waterways transport, may be taxed in the Contracting State in which the place of effective management of the enterprise is situated.”

Paragraph 3 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 3 read as follows:

“3. Notwithstanding the preceding provisions of this Article, remuneration in respect of an employment exercised aboard a ship or aircraft in international traffic, or aboard a boat engaged in inland waterways transport, may be taxed in the Contracting State in which the place of effective management of the enterprise is situated.”

## **ARTICLE 16**

### **DIRECTORS' FEES**

Directors' fees and other similar payments derived by a resident of a Contracting State in his capacity as a member of the board of directors of a company which is a resident of the other Contracting State may be taxed in that other State.

### **HISTORY**

Article 16 was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977 by adding the word "other" immediately before "similar payments". In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, Article 16 read as follows:

"Directors' fees and similar payments derived by a resident of a Contracting State in his capacity as a member of the board of directors of a company which is a resident of the other Contracting State may be taxed in that other State."

## ARTICLE 17

### ENTERTAINERS AND SPORTSPERSONS

1. Notwithstanding the provisions of Article 15, income derived by a resident of a Contracting State as an entertainer, such as a theatre, motion picture, radio or television artiste, or a musician, or as a sportsperson, from that resident's personal activities as such exercised in the other Contracting State, may be taxed in that other State.

2. Where income in respect of personal activities exercised by an entertainer or a sportsperson acting as such accrues not to the entertainer or sportsperson but to another person, that income may, notwithstanding the provisions of Article 15, be taxed in the Contracting State in which the activities of the entertainer or sportsperson are exercised.

### HISTORY

**The title of Article 17:** Amended on 15 July 2014 by the report entitled "The 2014 Update to the Model Tax Convention", adopted by the OECD Council on 15 July 2014. After 23 July 1992 and until 15 July 2014, the title of Article 17 read as follows:

"ARTISTES AND SPORTSMEN"

The title of Article 17 was previously amended on 23 July 1992 by the report entitled "The Revision of the Model Convention", adopted by the OECD Council on 23 July 1992, on the basis of paragraph 5 of the report entitled "The Taxation of Income Derived from Entertainment, Artistic and Sporting Activities" (adopted by the OECD Council on 27 March 1987). In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until 23 July 1992, the title of Article 17 read as follows:

"ARTISTES AND ATHLETES"

**Paragraph 1:** Amended on 15 July 2014 by the report entitled "The 2014 Update to the Model Tax Convention", adopted by the OECD Council on 15 July 2014. After 29 April 2000 and until 15 July 2014, paragraph 1 read as follows:

"1. Notwithstanding the provisions of Articles 7 and 15, income derived by a resident of a Contracting State as an entertainer, such as a theatre, motion picture, radio or television artiste, or a musician, or as a sportsman, from his personal activities as such exercised in the other Contracting State, may be taxed in that other State."

Paragraph 1 was previously amended on 29 April 2000, by replacing the cross-reference to "Article 14" with a cross-reference to "Article 7", by the report entitled "The 2000 Update to the Model Tax Convention", adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled "Issues related to Article 14 of the OECD Model Tax Convention" (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000). After 23 July 1992 and until 29 April 2000, paragraph 1 read as follows:

"1. Notwithstanding the provisions of Articles 14 and 15, income derived by a resident of a Contracting State as an entertainer, such as a theatre, motion picture, radio or television artiste, or a musician, or as a sportsman, from his personal activities as such exercised in the other Contracting State, may be taxed in that other State."

Paragraph 1 was previously amended on 23 July 1992, by replacing the words “an athlete” with “a sportsman”, by the report entitled “The Revision of the Model Convention”, adopted by the OECD Council on 23 July 1992, on the basis of paragraph 5 of the report entitled “The Taxation of Income Derived from Entertainment, Artistic and Sporting Activities” (adopted by the OECD Council on 27 March 1987). In the 1977 Model Convention and until 23 July 1992, paragraph 1 read as follows:

“1. Notwithstanding the provisions of Articles 14 and 15, income derived by a resident of a Contracting State as an entertainer, such as a theatre, motion picture, radio or television artiste, or a musician, or as an athlete, from his personal activities as such exercised in the other Contracting State, may be taxed in that other State.”

Paragraph 1 was included in the 1963 Draft Convention as Article 17. In the 1977 Model Convention, adopted by the OECD Council on 11 April 1977, Article 17 was designated as paragraph 1 and amended. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, Article 17 read as follows:

“Notwithstanding the provisions of Articles 14 and 15, income derived by public entertainers, such as theatre, motion picture, radio or television artistes, and musicians, and by athletes, from their personal activities as such may be taxed in the Contracting State in which these activities are exercised.”

**Paragraph 2:** Amended on 15 July 2014 by the report entitled “The 2014 Update to the Model Tax Convention”, adopted by the OECD Council on 15 July 2014. After 29 April 2000 and until 15 July 2014, paragraph 2 read as follows:

“2. Where income in respect of personal activities exercised by an entertainer or a sportsman in his capacity as such accrues not to the entertainer or sportsman himself but to another person, that income may, notwithstanding the provisions of Articles 7 and 15, be taxed in the Contracting State in which the activities of the entertainer or sportsman are exercised.”

Paragraph 2 was previously amended on 29 April 2000, by deleting the reference to Article 14, by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000). After 23 July 1992 and until 29 April 2000, paragraph 2 read as follows:

“2. Where income in respect of personal activities exercised by an entertainer or a sportsman in his capacity as such accrues not to the entertainer or sportsman himself but to another person, that income may, notwithstanding the provisions of Articles 7, 14 and 15, be taxed in the Contracting State in which the activities of the entertainer or sportsman are exercised.”

Paragraph 2 was previously amended on 23 July 1992, by replacing the two references to “athlete” with “sportsman”, by the report entitled “The Revision of the Model Convention”, adopted by the OECD Council on 23 July 1992, on the basis of paragraph 5 of the report entitled “The Taxation of Income Derived from Entertainment, Artistic and Sporting Activities” (adopted by the OECD Council on 27 March 1987). In the 1977 Model Convention and until 23 July 1992, paragraph 2 read as follows:

“2. Where income in respect of personal activities exercised by an entertainer or a athlete in his capacity as such accrues not to the entertainer or athlete himself but to another person, that income may, notwithstanding the provisions of Articles 7, 14 and 15, be taxed in the Contracting State in which the activities of the entertainer or sportsman are exercised.”

Paragraph 2 was added when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977.

## **ARTICLE 18**

### **PENSIONS**

Subject to the provisions of paragraph 2 of Article 19, pensions and other similar remuneration paid to a resident of a Contracting State in consideration of past employment shall be taxable only in that State.

### **HISTORY**

Article 18 was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977 by replacing the words “paragraph 1 of Article 19” with “paragraph 2 of Article 19”. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, Article 18 read as follows:

“Subject to the provisions of paragraph 1 of Article 19, pensions and other similar remuneration paid to a resident of a Contracting State in consideration of past employment shall be taxable only in that State.”

## ARTICLE 19

### GOVERNMENT SERVICE

1. a) Salaries, wages and other similar remuneration paid by a Contracting State or a political subdivision or a local authority thereof to an individual in respect of services rendered to that State or subdivision or authority shall be taxable only in that State.  
b) However, such salaries, wages and other similar remuneration shall be taxable only in the other Contracting State if the services are rendered in that State and the individual is a resident of that State who:
  - (i) is a national of that State; or
  - (ii) did not become a resident of that State solely for the purpose of rendering the services.
2. a) Notwithstanding the provisions of paragraph 1, pensions and other similar remuneration paid by, or out of funds created by, a Contracting State or a political subdivision or a local authority thereof to an individual in respect of services rendered to that State or subdivision or authority shall be taxable only in that State.  
b) However, such pensions and other similar remuneration shall be taxable only in the other Contracting State if the individual is a resident of, and a national of, that State.
3. The provisions of Articles 15, 16, 17, and 18 shall apply to salaries, wages, pensions, and other similar remuneration in respect of services rendered in connection with a business carried on by a Contracting State or a political subdivision or a local authority thereof.

## HISTORY

**The title of Article 19:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, the title of Article 19 read as follows:

“GOVERNMENTAL FUNCTIONS”

**Paragraph 1:** Amended on 15 July 2005, by deleting the words “other than a pension” in subparagraph a), by the report entitled “The 2005 Update to the Model Tax Convention”, adopted by the OECD Council on 15 July 2005. After 31 March 1994 and until 15 July 2005, paragraph 1 read as follows:

- “1. a) Salaries, wages and other similar remuneration, other than a pension, paid by a Contracting State or a political subdivision or a local authority thereof to an individual in respect of services rendered to that State or subdivision or authority shall be taxable only in that State.

MODEL CONVENTION

---

- b) However, such salaries, wages and other similar remuneration shall be taxable only in the other Contracting State if the services are rendered in that State and the individual is a resident of that State who:
  - (i) is a national of that State; or
  - (ii) did not become a resident of that State solely for the purpose of rendering the services.”

Paragraph 1 was previously amended on 31 March 1994 by the report entitled “1994 Update to the Model Tax Convention”, adopted by the OECD Council on 31 March 1994. In the 1977 Model Convention and until 31 March 1994, paragraph 1 read as follows:

- “1. a) Remuneration, other than a pension, paid by a Contracting State or a political subdivision or a local authority thereof to an individual in respect of services rendered to that State or subdivision or authority shall be taxable only in that State.
- b) However, such remuneration shall be taxable only in the other Contracting State if the services are rendered in that State and the individual is a resident of that State who:
  - (i) is a national of that State; or
  - (ii) did not become a resident of that State solely for the purpose of rendering the services.”

Paragraph 1 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 1 read as follows:

- “1. Remuneration, including pensions, paid by, or out of funds created by, a Contracting State or a political subdivision or a local authority thereof to any individual in respect of services rendered to that State or subdivision or local authority thereof in the discharge of functions of a governmental nature may be taxed in that State.”

**Paragraph 2:** Amended on 15 July 2005 by the report entitled “The 2005 Update to the Model Tax Convention”, adopted by the OECD Council on 15 July 2005. In the 1977 Model Convention and until 15 July 2005, paragraph 2 read as follows:

- “2. a) Any pension paid by, or out of funds created by, a Contracting State or a political subdivision or a local authority thereof to an individual in respect of services rendered to that State or subdivision or authority shall be taxable only in that State.
- b) However, such pension shall be taxable only in the other Contracting State if the individual is a resident of, and a national of, that State.”

Paragraph 2 of the 1963 Draft Convention was replaced when the 1977 Model Convention, was adopted by the OECD Council on 11 April 1977. At that time, paragraph 2 of the 1963 Draft Convention was amended and renumbered as paragraph 3 (see history of paragraph 3) and new paragraph 2 was added when the 1977 Model Convention was adopted.

**Paragraph 3:** Amended on 15 July 2005 by the report entitled “The 2005 Update to the Model Tax Convention”, adopted by the OECD Council on 15 July 2005. After 21 September 1995 and until 15 July 2005, paragraph 3 read as follows:

- “3. The provisions of Articles 15, 16, 17, and 18 shall apply to salaries, wages and other similar remuneration, and to pensions, in respect of services rendered in connection with a business carried on by a Contracting State or a political subdivision or a local authority thereof.”

Paragraph 3 was previously amended on 21 September 1995, by adding a reference to Article 17, by the report entitled “The 1995 Update to the Model Tax Convention”, adopted by the OECD Council on 21 September 1995. After 31 March 1994 and until 21 September 1995, paragraph 3 read as follows:

“3. The provisions of Articles 15, 16, and 18 shall apply to salaries, wages and other similar remuneration, and to pensions, in respect of services rendered in connection with a business carried on by a Contracting State or a political subdivision or a local authority thereof.”

Paragraph 3 was previously amended on 31 March 1994 by the report entitled “1994 Update to the Model Tax Convention”, adopted by the OECD Council on 31 March 1994. In the 1977 Model Convention and until 31 March 1994, paragraph 3 read as follows:

“3. The provisions of Articles 15, 16 and 18 shall apply to remuneration and pensions in respect of services rendered in connection with a business carried on by a Contracting State or a political subdivision or a local authority thereof.”

Paragraph 3 of the 1977 Model Convention corresponded to paragraph 2 of the 1963 Draft Convention. Paragraph 2 of the 1963 Draft Convention was renumbered as paragraph 3 and amended, by substituting “remuneration and pensions” for “remuneration or pensions” and by substituting “a business” for “any trade or business”, when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 read as follows:

“2. The provisions of Articles 15, 16 and 18 shall apply to remuneration or pensions in respect of services rendered in connection with a trade or business carried on by one of the Contracting States or a political subdivision or a local authority thereof.”

## **ARTICLE 20**

### **STUDENTS**

Payments which a student or business apprentice who is or was immediately before visiting a Contracting State a resident of the other Contracting State and who is present in the first-mentioned State solely for the purpose of his education or training receives for the purpose of his maintenance, education or training shall not be taxed in that State, provided that such payments arise from sources outside that State.

### **HISTORY**

Article 20 was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, Article 20 read as follows:

“Payments which a student or business apprentice who is or was formerly a resident of a Contracting State and who is present in the other Contracting State solely for the purpose of his education or training receives for the purpose of his maintenance, education or training shall not be taxed in that other State, provided that such payments are made to him from sources outside that other State.”

## ARTICLE 21

### OTHER INCOME

1. Items of income of a resident of a Contracting State, wherever arising, not dealt with in the foregoing Articles of this Convention shall be taxable only in that State.

2. The provisions of paragraph 1 shall not apply to income, other than income from immovable property as defined in paragraph 2 of Article 6, if the recipient of such income, being a resident of a Contracting State, carries on business in the other Contracting State through a permanent establishment situated therein and the right or property in respect of which the income is paid is effectively connected with such permanent establishment. In such case the provisions of Article 7 shall apply.

### HISTORY

**The title of Article 21:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, the title of Article 21 read as follows:

“INCOME NOT EXPRESSLY MENTIONED”

**Paragraph 1:** Corresponds to Article 21 of the 1963 Draft Convention. Article 21 of the 1963 Draft Convention was designated as paragraph 1 and amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, Article 21 read as follows:

“Items of income of a resident of a Contracting State which are not expressly mentioned in the foregoing Articles of this Convention shall be taxable only in that State.”

**Paragraph 2:** Amended on 29 April 2000 by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000). In the 1977 Convention and until 29 April 2000, paragraph 2 read as follows:

“2. The provisions of paragraph 1 shall not apply to income, other than income from immovable property as defined in paragraph 2 of Article 6, if the recipient of such income, being a resident of a Contracting State, carries on business in the other Contracting State through a permanent establishment situated therein, or performs in that other State independent personal services from a fixed base situated therein, and the right or property in respect of which the income is paid is effectively connected with such permanent establishment or fixed base. In such case the provisions of Article 7 or Article 14, as the case may be, shall apply.”

Paragraph 2 was added when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977.

## Chapter IV

# TAXATION OF CAPITAL

### ARTICLE 22

#### CAPITAL

1. Capital represented by immovable property referred to in Article 6, owned by a resident of a Contracting State and situated in the other Contracting State, may be taxed in that other State.
2. Capital represented by movable property forming part of the business property of a permanent establishment which an enterprise of a Contracting State has in the other Contracting State may be taxed in that other State.
3. Capital of an enterprise of a Contracting State that operates ships or aircraft in international traffic represented by such ships or aircraft, and by movable property pertaining to the operation of such ships or aircraft, shall be taxable only in that State.
4. All other elements of capital of a resident of a Contracting State shall be taxable only in that State.

### HISTORY

**Paragraph 1:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 1 read as follows:

“1. Capital represented by immovable property, as defined in paragraph 2 of Article 6, may be taxed in the Contracting State in which such property is situated.”

**Paragraph 2:** Amended on 29 April 2000 by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of the Annex of another report entitled “Issues related to Article 14 of the OECD Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 27 January 2000). In the 1977 Convention and until 29 April 2000, paragraph 2 read as follows:

“2. Capital represented by movable property forming part of the business property of a permanent establishment which an enterprise of a Contracting State has in the other Contracting State or by movable property pertaining to a fixed base available to a resident of a Contracting State in the other Contracting State for the purpose of performing independent personal services, may be taxed in that other State.”

Paragraph 2 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 read as follows:

“2. Capital represented by movable property forming part of the business property of a permanent establishment of an enterprise, or by movable property pertaining to a fixed base used for the performance of professional services, may be taxed in the Contracting State in which the permanent establishment or fixed base is situated.”

**Paragraph 3:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017. In the 1977 Model Convention and until 21 November 2017, paragraph 3 read as follows:

“3. Capital represented by ships and aircraft operated in international traffic and by boats engaged in inland waterways transport, and by movable property pertaining to the operation of such ships, aircraft and boats, shall be taxable only in the Contracting State in which the place of effective management of the enterprise is situated.”

Paragraph 3 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 3 read as follows:

“3. Ships and aircraft operated in international traffic and boats engaged in inland waterways transport, and movable property pertaining to the operation of such ships, aircraft and boats, shall be taxable only in the Contracting State in which the place of effective management of the enterprise is situated.”

**Paragraph 4:** Unchanged since the adoption of the 1963 Draft Convention by the OECD Council on 30 July 1963.

*Chapter V*  
**METHODS FOR ELIMINATION OF DOUBLE  
TAXATION**

**ARTICLE 23 A**  
**EXEMPTION METHOD**

1. Where a resident of a Contracting State derives income or owns capital which may be taxed in the other Contracting State in accordance with the provisions of this Convention (except to the extent that these provisions allow taxation by that other State solely because the income is also income derived by a resident of that State or because the capital is also capital owned by a resident of that State), the first-mentioned State shall, subject to the provisions of paragraphs 2 and 3, exempt such income or capital from tax.

2. Where a resident of a Contracting State derives items of income which may be taxed in the other Contracting State in accordance with the provisions of Articles 10 and 11 (except to the extent that these provisions allow taxation by that other State solely because the income is also income derived by a resident of that State), the first-mentioned State shall allow as a deduction from the tax on the income of that resident an amount equal to the tax paid in that other State. Such deduction shall not, however, exceed that part of the tax, as computed before the deduction is given, which is attributable to such items of income derived from that other State.

3. Where in accordance with any provision of the Convention income derived or capital owned by a resident of a Contracting State is exempt from tax in that State, such State may nevertheless, in calculating the amount of tax on the remaining income or capital of such resident, take into account the exempted income or capital.

4. The provisions of paragraph 1 shall not apply to income derived or capital owned by a resident of a Contracting State where the other Contracting State applies the provisions of this Convention to exempt such income or capital from tax or applies the provisions of paragraph 2 of Article 10 or 11 to such income.

**HISTORY**

**Paragraph 1:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, as a result of follow-up work on another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by

the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015. In the 1977 Model Convention and until 21 November 2017, paragraph 1 read as follows:

“1. Where a resident of a Contracting State derives income or owns capital which, in accordance with the provisions of this Convention, may be taxed in the other Contracting State, the first-mentioned State shall, subject to the provisions of paragraphs 2 and 3, exempt such income or capital from tax.”

Paragraph 1 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 1 read as follows:

“1. Where a resident of a Contracting State derives income or owns capital which, in accordance with the provisions of this Convention, may be taxed in the other Contracting State, the first-mentioned State shall, subject to the provisions of paragraph 2, exempt such income or capital from tax but may, in calculating tax on the remaining income or capital of that person, apply the rate of tax which would have been applicable if the exempted income or capital had not been so exempted.”

**Paragraph 2:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, as a result of follow-up work on another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015. In the 1977 Model Convention and until 21 November 2017, paragraph 2 read as follows:

“2. Where a resident of a Contracting State derives items of income which, in accordance with the provisions of Articles 10 and 11, may be taxed in the other Contracting State, the first-mentioned State shall allow as a deduction from the tax on the income of that resident an amount equal to the tax paid in that other State. Such deduction shall not, however, exceed that part of the tax, as computed before the deduction is given, which is attributable to such items of income derived from that other State.”

Paragraph 2 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 read as follows:

“2. Where a resident of a Contracting State derives income which, in accordance with the provisions of Articles 10 and 11, may be taxed in the other Contracting State, the first-mentioned State shall allow as a deduction from the tax on the income of that person an amount equal to the tax paid in that other Contracting State. Such deduction shall not, however, exceed that part of the tax, as computed before the deduction is given, which is appropriate to the income derived from that other Contracting State.”

**Paragraph 3:** Added when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977.

**Paragraph 4:** Added on 29 April 2000 by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000, on the basis of paragraph 113 of another report entitled “The Application of the OECD Model Tax Convention to Partnerships” (adopted by the OECD Committee on Fiscal Affairs on 20 January 1999).

## ARTICLE 23 B

### CREDIT METHOD

1. Where a resident of a Contracting State derives income or owns capital which may be taxed in the other Contracting State in accordance with the provisions of this Convention (except to the extent that these provisions allow taxation by that other State solely because the income is also income derived by a resident of that State or because the capital is also capital owned by a resident of that State), the first-mentioned State shall allow:

- a) as a deduction from the tax on the income of that resident, an amount equal to the income tax paid in that other State;
- b) as a deduction from the tax on the capital of that resident, an amount equal to the capital tax paid in that other State.

Such deduction in either case shall not, however, exceed that part of the income tax or capital tax, as computed before the deduction is given, which is attributable, as the case may be, to the income or the capital which may be taxed in that other State.

2. Where in accordance with any provision of the Convention income derived or capital owned by a resident of a Contracting State is exempt from tax in that State, such State may nevertheless, in calculating the amount of tax on the remaining income or capital of such resident, take into account the exempted income or capital.

## HISTORY

**Paragraph 1:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, as a result of follow-up work on another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015. In the 1977 Model Convention and until 21 November 2017, paragraph 1 read as follows:

“1. Where a resident of a Contracting State derives income or owns capital which, in accordance with the provisions of this Convention, may be taxed in the other Contracting State, the first-mentioned State shall allow:

- a) as a deduction from the tax on the income of that resident, an amount equal to the income tax paid in that other State;
- b) as a deduction from the tax on the capital of that resident, an amount equal to the capital tax paid in that other State.

Such deduction in either case shall not, however, exceed that part of the income tax or capital tax, as computed before the deduction is given, which is attributable, as the case may be, to the income or the capital which may be taxed in that other State.”

Paragraph 1 as it read after 11 April 1977 corresponded to paragraphs 1 and 2 of the 1963 Draft Convention. These paragraphs were merged and amended when the 1977

Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraphs 1 and 2 read as follows:

“1. Where a resident of a Contracting State derives income or owns capital which, in accordance with the provisions of this Convention, may be taxed in the other Contracting State, the first-mentioned State shall allow:

- a) as a deduction from the tax on the income of that person, an amount equal to the income tax paid in that other Contracting State;
- b) as a deduction from the tax on the capital of that person, an amount equal to the capital tax paid in that other Contracting State.

2. The deduction in either case shall not, however, exceed that part of the income tax or capital tax, respectively, as computed before the deduction is given, which is appropriate, as the case may be, to the income or the capital which may be taxed in the other Contracting State.”

**Paragraph 2:** Replaced paragraph 2 of the 1963 Draft Convention when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. At that time, paragraph 2 of the 1963 Draft Convention was merged with paragraph 1 (see history of paragraph 1) and a new paragraph 2 was added.

## *Chapter VI*

# **SPECIAL PROVISIONS**

### **ARTICLE 24**

### **NON-DISCRIMINATION**

1. Nationals of a Contracting State shall not be subjected in the other Contracting State to any taxation or any requirement connected therewith, which is other or more burdensome than the taxation and connected requirements to which nationals of that other State in the same circumstances, in particular with respect to residence, are or may be subjected. This provision shall, notwithstanding the provisions of Article 1, also apply to persons who are not residents of one or both of the Contracting States.

2. Stateless persons who are residents of a Contracting State shall not be subjected in either Contracting State to any taxation or any requirement connected therewith, which is other or more burdensome than the taxation and connected requirements to which nationals of the State concerned in the same circumstances, in particular with respect to residence, are or may be subjected.

3. The taxation on a permanent establishment which an enterprise of a Contracting State has in the other Contracting State shall not be less favourably levied in that other State than the taxation levied on enterprises of that other State carrying on the same activities. This provision shall not be construed as obliging a Contracting State to grant to residents of the other Contracting State any personal allowances, reliefs and reductions for taxation purposes on account of civil status or family responsibilities which it grants to its own residents.

4. Except where the provisions of paragraph 1 of Article 9, paragraph 6 of Article 11, or paragraph 4 of Article 12, apply, interest, royalties and other disbursements paid by an enterprise of a Contracting State to a resident of the other Contracting State shall, for the purpose of determining the taxable profits of such enterprise, be deductible under the same conditions as if they had been paid to a resident of the first-mentioned State. Similarly, any debts of an enterprise of a Contracting State to a resident of the other Contracting State shall, for the purpose of determining the taxable capital of such enterprise, be deductible under the same conditions as if they had been contracted to a resident of the first-mentioned State.

5. Enterprises of a Contracting State, the capital of which is wholly or partly owned or controlled, directly or indirectly, by one or more residents of the other Contracting State, shall not be subjected in the first-mentioned State to any taxation or any requirement connected therewith which is other or more burdensome than the taxation and connected requirements to which other similar enterprises of the first-mentioned State are or may be subjected.
6. The provisions of this Article shall, notwithstanding the provisions of Article 2, apply to taxes of every kind and description.

## HISTORY

**Paragraph 1:** Amended on 23 July 1992, by adding the words “in particular with respect to residence” in the first sentence, by the report entitled “The Revision of the Model Convention”, adopted by the OECD Council on 23 July 1992. In the 1977 Model Convention and until 23 July 1992, paragraph 1 read as follows:

“1. Nationals of a Contracting State shall not be subjected in the other Contracting State to any taxation or any requirement connected therewith, which is other or more burdensome than the taxation and connected requirements to which nationals of that other State in the same circumstances are or may be subjected. This provision shall, notwithstanding the provisions of Article 1, also apply to persons who are not residents of one or both of the Contracting States.”

Paragraph 1 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, notably by adding the second sentence. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 1 read as follows:

“1. The nationals of a Contracting State shall not be subjected in the other Contracting State to any taxation or any requirement connected therewith which is other or more burdensome than the taxation and connected requirements to which nationals of that other State in the same circumstances are or may be subjected.”

**Paragraph 2:** Amended on 23 October 1997, by adding the words “in particular with respect to residence” after the words “in the same circumstances”, by the report entitled “The 1997 Update to the Model Tax Convention”, adopted by the OECD Council on 23 October 1997. After 23 July 1992 and until 23 October 1997, paragraph 2 read as follows:

“2. Stateless persons who are residents of a Contracting State shall not be subjected in either Contracting State to any taxation or any requirement connected therewith, which is other or more burdensome than the taxation and connected requirements to which nationals of the State concerned in the same circumstances, in particular with respect to residence, are or may be subjected.”

Paragraph 2 as it read after 23 July 1992 corresponded to paragraph 3 of the 1977 Model Convention. On 23 July 1992, paragraph 2 of the 1977 Model Convention was amended and redesignated as subparagraph 1 f) of Article 3 (see history of paragraph 1 of Article 3) and paragraph 3 was renumbered as paragraph 2, by the report entitled “The Revision of the Model Convention”, adopted by the OECD Council

MODEL CONVENTION

---

on 23 July 1992. In the 1977 Model Convention and until 23 July 1992, paragraph 3 read as follows:

“3. The term “nationals” means:

- a) all individuals possessing the nationality of a Contracting State;
- b) all legal persons, partnerships and associations deriving their status as such from the laws in force in a Contracting State.”

Paragraph 3 of the 1963 Draft Convention was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 3 read as follows:

“3. Stateless persons shall not be subjected in a Contracting State to any taxation or any requirement connected therewith which is other or more burdensome than the taxation and connected requirements to which nationals of that State in the same circumstances are or may be subjected.”

**Paragraph 3:** Corresponds to paragraph 4 of the 1977 Model Convention as it read before 23 July 1992. On that date, paragraph 3 was renumbered as paragraph 2 (see history of paragraph 2) and paragraph 4 of the 1977 Model Convention was renumbered as paragraph 3, by the report entitled “The Revision of the Model Convention”, adopted by the OECD Council on 23 July 1992.

Paragraph 4 was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention, the second sentence was presented as a second paragraph within paragraph 4 of the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963). This was corrected when the 1977 Model Convention was adopted.

**Paragraph 4:** Corresponds to paragraph 5 of the 1977 Model Convention as it read before 23 July 1992. On that date, paragraph 4 was renumbered as paragraph 3 (see history of paragraph 3) and paragraph 5 of the 1977 Model Convention was renumbered as paragraph 4, by the report entitled “The Revision of the Model Convention”, adopted by the OECD Council on 23 July 1992.

Paragraph 5 of the 1977 Model Convention was added when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977.

**Paragraph 5:** Corresponds to paragraph 6 of the 1977 Model Convention as it read before 23 July 1992. On that date, paragraph 5 was renumbered as paragraph 4 (see history of paragraph 4) and paragraph 6 of the 1977 Model Convention was renumbered as paragraph 5 by the report entitled “The Revision of the Model Convention”, adopted by the OECD Council on 23 July 1992.

Paragraph 6 of the 1977 Model Convention corresponded to paragraph 5 of the 1963 Draft Convention. Paragraph 5 of the 1963 Draft Convention was renumbered as paragraph 6 and amended when the 1977 Model Convention, was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 5 read as follows:

“5. Enterprises of a Contracting State, the capital of which is wholly or partly owned or controlled, directly or indirectly, by one or more residents of the other Contracting State, shall not be subjected in the first-mentioned Contracting State to any taxation or any requirement connected therewith which is other or more burdensome than the taxation and connected requirements to which other similar enterprises of that first-mentioned State are or may be subjected.”

**Paragraph 6:** Corresponds to paragraph 7 of the 1977 Model Convention as it read before 23 July 1992. On that date, paragraph 6 was renumbered as paragraph 5 (see

history of paragraph 5) and paragraph 7 of the 1977 Model Convention was renumbered as paragraph 6 by the report entitled “The Revision of the Model Convention”, adopted by the OECD Council on 23 July 1992.

Paragraph 7 of the 1977 Model Convention corresponded to paragraph 6 of the 1963 Draft Convention. Paragraph 6 of the 1963 Draft Convention was amended and renumbered as paragraph 7 when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 6 read as follows:

“6. In this Article the term “taxation” means taxes of every kind and description.”

## ARTICLE 25

### MUTUAL AGREEMENT PROCEDURE

1. Where a person considers that the actions of one or both of the Contracting States result or will result for him in taxation not in accordance with the provisions of this Convention, he may, irrespective of the remedies provided by the domestic law of those States, present his case to the competent authority of either Contracting State. The case must be presented within three years from the first notification of the action resulting in taxation not in accordance with the provisions of the Convention.

2. The competent authority shall endeavour, if the objection appears to it to be justified and if it is not itself able to arrive at a satisfactory solution, to resolve the case by mutual agreement with the competent authority of the other Contracting State, with a view to the avoidance of taxation which is not in accordance with the Convention. Any agreement reached shall be implemented notwithstanding any time limits in the domestic law of the Contracting States.

3. The competent authorities of the Contracting States shall endeavour to resolve by mutual agreement any difficulties or doubts arising as to the interpretation or application of the Convention. They may also consult together for the elimination of double taxation in cases not provided for in the Convention.

4. The competent authorities of the Contracting States may communicate with each other directly, including through a joint commission consisting of themselves or their representatives, for the purpose of reaching an agreement in the sense of the preceding paragraphs.

5. Where,

- a) under paragraph 1, a person has presented a case to the competent authority of a Contracting State on the basis that the actions of one or both of the Contracting States have resulted for that person in taxation not in accordance with the provisions of this Convention, and
- b) the competent authorities are unable to reach an agreement to resolve that case pursuant to paragraph 2 within two years from the date when all the information required by the competent authorities in order to address the case has been provided to both competent authorities,

any unresolved issues arising from the case shall be submitted to arbitration if the person so requests in writing. These unresolved issues shall not, however, be submitted to arbitration if a decision on these issues has already been rendered by a court or administrative tribunal of either State. Unless a person directly affected by the case does not accept the mutual agreement

that implements the arbitration decision, that decision shall be binding on both Contracting States and shall be implemented notwithstanding any time limits in the domestic laws of these States. The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of this paragraph.

## HISTORY

**Paragraph 1:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Making Dispute Resolution Mechanisms More Effective, Action 14 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015. In the 1977 Model Convention and until 21 November 2017, paragraph 1 read as follows:

“1. Where a person considers that the actions of one or both of the Contracting States result or will result for him in taxation not in accordance with the provisions of this Convention, he may, irrespective of the remedies provided by the domestic law of those States, present his case to the competent authority of the Contracting State of which he is a resident or, if his case comes under paragraph 1 of Article 24, to that of the Contracting State of which he is a national. The case must be presented within three years from the first notification of the action resulting in taxation not in accordance with the provisions of the Convention.”

Paragraph 1 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, notably by adding the second sentence. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 1 read as follows:

“1. Where a resident of a Contracting State considers that the actions of one or both of the Contracting States result or will result for him in taxation not in accordance with this Convention, he may, notwithstanding the remedies provided by the national laws of those States, present his case to the competent authority of the Contracting State of which he is a resident.”

**Paragraph 2:** Amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977, notably by adding the second sentence. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 read as follows:

“2. The competent authority shall endeavour, if the objection appears to it to be justified and if it is not itself able to arrive at an appropriate solution, to resolve the case by mutual agreement with the competent authority of the other Contracting State, with a view to the avoidance of taxation not in accordance with the Convention.”

**Paragraph 3:** Unchanged since the adoption of the 1963 Draft Convention by the OECD Council on 30 July 1963.

**Paragraph 4:** Amended on 21 September 1995 by the report entitled “The 1995 Update to the Model Tax Convention”, adopted by the OECD Council on 21 September 1995. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until 21 September 1995, paragraph 4 read as follows:

“4. The competent authorities of the Contracting States may communicate with each other directly for the purpose of reaching an agreement in the sense of the preceding paragraphs. When it seems advisable in order to reach agreement to have an oral exchange of opinions, such exchange may take place through a Commission consisting of representatives of the competent authorities of the Contracting States.”

**Paragraph 5:** Amended on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017. After 17 July 2008 and until 21 November 2017, paragraph 5 read as follows:

“5. Where,

- a) under paragraph 1, a person has presented a case to the competent authority of a Contracting State on the basis that the actions of one or both of the Contracting States have resulted for that person in taxation not in accordance with the provisions of this Convention, and
- b) the competent authorities are unable to reach an agreement to resolve that case pursuant to paragraph 2 within two years from the presentation of the case to the competent authority of the other Contracting State,

any unresolved issues arising from the case shall be submitted to arbitration if the person so requests. These unresolved issues shall not, however, be submitted to arbitration if a decision on these issues has already been rendered by a court or administrative tribunal of either State. Unless a person directly affected by the case does not accept the mutual agreement that implements the arbitration decision, that decision shall be binding on both Contracting States and shall be implemented notwithstanding any time limits in the domestic laws of these States. The competent authorities of the Contracting States shall by mutual agreement settle the mode of application of this paragraph.<sup>1</sup>

- 1 In some States, national law, policy or administrative considerations may not allow or justify the type of dispute resolution envisaged under this paragraph. In addition, some States may only wish to include this paragraph in treaties with certain States. For these reasons, the paragraph should only be included in the Convention where each State concludes that it would be appropriate to do so based on the factors described in paragraph 65 of the Commentary on the paragraph. As mentioned in paragraph 74 of that Commentary, however, other States may be able to agree to remove from the paragraph the condition that issues may not be submitted to arbitration if a decision on these issues has already been rendered by one of their courts or administrative tribunals.”

Paragraph 5 was added on 17 July 2008 by the report entitled “The 2008 Update to the Model Tax Convention”, adopted by the OECD Council on 17 July 2008.

## ARTICLE 26

### EXCHANGE OF INFORMATION

1. The competent authorities of the Contracting States shall exchange such information as is foreseeably relevant for carrying out the provisions of this Convention or to the administration or enforcement of the domestic laws concerning taxes of every kind and description imposed on behalf of the Contracting States, or of their political subdivisions or local authorities, insofar as the taxation thereunder is not contrary to the Convention. The exchange of information is not restricted by Articles 1 and 2.

2. Any information received under paragraph 1 by a Contracting State shall be treated as secret in the same manner as information obtained under the domestic laws of that State and shall be disclosed only to persons or authorities (including courts and administrative bodies) concerned with the assessment or collection of, the enforcement or prosecution in respect of, the determination of appeals in relation to the taxes referred to in paragraph 1, or the oversight of the above. Such persons or authorities shall use the information only for such purposes. They may disclose the information in public court proceedings or in judicial decisions. Notwithstanding the foregoing, information received by a Contracting State may be used for other purposes when such information may be used for such other purposes under the laws of both States and the competent authority of the supplying State authorises such use.

3. In no case shall the provisions of paragraphs 1 and 2 be construed so as to impose on a Contracting State the obligation:

- a) to carry out administrative measures at variance with the laws and administrative practice of that or of the other Contracting State;
- b) to supply information which is not obtainable under the laws or in the normal course of the administration of that or of the other Contracting State;
- c) to supply information which would disclose any trade, business, industrial, commercial or professional secret or trade process, or information the disclosure of which would be contrary to public policy (*ordre public*).

4. If information is requested by a Contracting State in accordance with this Article, the other Contracting State shall use its information gathering measures to obtain the requested information, even though that other State may not need such information for its own tax purposes. The obligation contained in the preceding sentence is subject to the limitations of paragraph 3 but in no case shall such limitations be construed to permit a

Contracting State to decline to supply information solely because it has no domestic interest in such information.

5. In no case shall the provisions of paragraph 3 be construed to permit a Contracting State to decline to supply information solely because the information is held by a bank, other financial institution, nominee or person acting in an agency or a fiduciary capacity or because it relates to ownership interests in a person.

## HISTORY

**Paragraph 1:** Corresponds to the first two sentences of paragraph 1 as they read before 15 July 2005. The first two sentences of Paragraph 1 were amended and the third and subsequent sentences were incorporated into paragraph 2 (see history of paragraph 2) by the report entitled “The 2005 Update to the Model Tax Convention”, adopted by the OECD Council on 15 July 2005, on the basis of another report entitled “Changes to Articles 25 and 26 of the Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 1 June 2004). After 29 April 2000 and until 15 July 2005, paragraph 1 read as follows:

“1. The competent authorities of the Contracting States shall exchange such information as is necessary for carrying out the provisions of this Convention or of the domestic laws concerning taxes of every kind and description imposed on behalf of the Contracting States, or of their political subdivisions or local authorities, insofar as the taxation thereunder is not contrary to the Convention. The exchange of information is not restricted by Articles 1 and 2. Any information received by a Contracting State shall be treated as secret in the same manner as information obtained under the domestic laws of that State and shall be disclosed only to persons or authorities (including courts and administrative bodies) concerned with the assessment or collection of, the enforcement or prosecution in respect of, or the determination of appeals in relation to the taxes referred to in the first sentence. Such persons or authorities shall use the information only for such purposes. They may disclose the information in public court proceedings or in judicial decisions.”

Paragraph 1 was previously amended on 29 April 2000 by the report entitled “The 2000 Update to the Model Tax Convention”, adopted by the OECD Committee on Fiscal Affairs on 29 April 2000. After 21 September 1995 and until 29 April 2000, paragraph 1 read as follows:

“1. The competent authorities of the Contracting States shall exchange such information as is necessary for carrying out the provisions of this Convention or of the domestic laws of the Contracting States concerning taxes covered by the Convention insofar as the taxation thereunder is not contrary to the Convention. The exchange of information is not restricted by Article 1. Any information received by a Contracting State shall be treated as secret in the same manner as information obtained under the domestic laws of that State and shall be disclosed only to persons or authorities (including courts and administrative bodies) concerned with the assessment or collection of, the enforcement or prosecution in respect of, or the determination of appeals in relation to, the taxes covered by the Convention. Such persons or authorities shall use the information only for such purposes. They may disclose the information in public court proceedings or in judicial decisions.”

Paragraph 1 was previously amended on 21 September 1995, by replacing the words “involved in” with “concerned with”, by the report entitled “The 1995 Update to the Model Tax Convention”, adopted by the OECD Council on 21 September 1995. In the 1977 Model Convention and until 21 September 1995, paragraph 1 read as follows:

“1. The competent authorities of the Contracting States shall exchange such information as is necessary for carrying out the provisions of this Convention or of the domestic laws of the Contracting States concerning taxes covered by the Convention insofar as the taxation thereunder is not contrary to the Convention. The exchange of information is not restricted by Article 1. Any information received by a Contracting State shall be treated as secret in the same manner as information obtained under the domestic laws of that State and shall be disclosed only to persons or authorities (including courts and administrative bodies) involved in the assessment or collection of, the enforcement or prosecution in respect of, or the determination of appeals in relation to, the taxes covered by the Convention. Such persons or authorities shall use the information only for such purposes. They may disclose the information in public court proceedings or in judicial decisions.”

Paragraph 1 was previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 1 read as follows:

“1. The competent authorities of the Contracting States shall exchange such information as is necessary for the carrying out of this Convention and of the domestic laws of the Contracting States concerning taxes covered by this Convention insofar as the taxation thereunder is in accordance with this Convention. Any information so exchanged shall be treated as secret and shall not be disclosed to any persons or authorities other than those concerned with the assessment or collection of the taxes which are the subject of the Convention.”

**Paragraph 2:** Amended on 15 July 2014, by adding the last sentence, by the report entitled “The 2014 Update to the Model Tax Convention”, adopted by the OECD Council on 15 July 2014, on the basis of the report “Draft Amendments to Article 26 of the OECD Model Tax Convention and its Commentary”, adopted by the OECD Council on 17 July 2012 and applicable from that date. After 15 July 2005 and until 15 July 2014, paragraph 2 read as follows:

“2. Any information received under paragraph 1 by a Contracting State shall be treated as secret in the same manner as information obtained under the domestic laws of that State and shall be disclosed only to persons or authorities (including courts and administrative bodies) concerned with the assessment or collection of, the enforcement or prosecution in respect of, the determination of appeals in relation to the taxes referred to in paragraph 1, or the oversight of the above. Such persons or authorities shall use the information only for such purposes. They may disclose the information in public court proceedings or in judicial decisions.”

Paragraph 2 as it read after 15 July 2005 corresponded to the third and subsequent sentences of paragraph 1 as they read before 15 July 2005. Those sentences were amended and incorporated into a new paragraph 2 by the report entitled “The 2005 Update to the Model Tax Convention”, adopted by the OECD Council on 15 July 2005, on the basis of another report entitled “Changes to Articles 25 and 26 of the Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 1 June 2004) (see history of paragraph 1). At the same time, paragraph 2 was renumbered as paragraph 3 (see history of paragraph 3) and amended to include a cross-reference to paragraph 2.

**Paragraph 3:** Corresponds to paragraph 2 as it read before 15 July 2005. On that date, paragraph 2 was renumbered as paragraph 3 and amended, by adding a cross-reference to paragraph 2, by the report entitled “The 2005 Update to the Model Tax Convention”, adopted by the OECD Council on 15 July 2005, on the basis of another report entitled “Changes to Articles 25 and 26 of the Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 1 June 2004). In the 1977 Model Convention and until 15 July 2005, paragraph 2 read as follows:

“2. In no case shall the provisions of paragraphs 1 and be construed so as to impose on a Contracting State the obligation:

- a) to carry out administrative measures at variance with the laws and administrative practice of that or of the other Contracting State;
- b) to supply information which is not obtainable under the laws or in the normal course of the administration of that or of the other Contracting State;
- c) to supply information which would disclose any trade, business, industrial, commercial or professional secret or trade process, or information, the disclosure of which would be contrary to public policy (*ordre public*).”

Paragraph 2 was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 read as follows:

“2. In no case shall the provisions of paragraph 1 be construed so as to impose on one of the Contracting States the obligation:

- a) to carry out administrative measures at variance with the laws or the administrative practice of that or of the other Contracting State;
- b) to supply particulars which are not obtainable under the laws or in the normal course of the administration of that or of the other Contracting State;
- c) to supply information which would disclose any trade, business, industrial, commercial or professional secret or trade process, or information, the disclosure of which would be contrary to public policy (*ordre public*).”

**Paragraph 4:** Added on 15 July 2005 by the report entitled “The 2005 Update to the Model Tax Convention”, adopted by the OECD Council on 15 July 2005, on the basis of another report entitled “Changes to Articles 25 and 26 of the Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 1 June 2004).

**Paragraph 5:** Added on 15 July 2005 by the report entitled “The 2005 Update to the Model Tax Convention”, adopted by the OECD Council on 15 July 2005, on the basis of another report entitled “Changes to Articles 25 and 26 of the Model Tax Convention” (adopted by the OECD Committee on Fiscal Affairs on 1 June 2004).

## ARTICLE 27

### ASSISTANCE IN THE COLLECTION OF TAXES<sup>1</sup>

1. The Contracting States shall lend assistance to each other in the collection of revenue claims. This assistance is not restricted by Articles 1 and 2. The competent authorities of the Contracting States may by mutual agreement settle the mode of application of this Article.

2. The term “revenue claim” as used in this Article means an amount owed in respect of taxes of every kind and description imposed on behalf of the Contracting States, or of their political subdivisions or local authorities, insofar as the taxation thereunder is not contrary to this Convention or any other instrument to which the Contracting States are parties, as well as interest, administrative penalties and costs of collection or conservancy related to such amount.

3. When a revenue claim of a Contracting State is enforceable under the laws of that State and is owed by a person who, at that time, cannot, under the laws of that State, prevent its collection, that revenue claim shall, at the request of the competent authority of that State, be accepted for purposes of collection by the competent authority of the other Contracting State. That revenue claim shall be collected by that other State in accordance with the provisions of its laws applicable to the enforcement and collection of its own taxes as if the revenue claim were a revenue claim of that other State.

4. When a revenue claim of a Contracting State is a claim in respect of which that State may, under its law, take measures of conservancy with a view to ensure its collection, that revenue claim shall, at the request of the competent authority of that State, be accepted for purposes of taking measures of conservancy by the competent authority of the other Contracting State. That other State shall take measures of conservancy in respect of that revenue claim in accordance with the provisions of its laws as if the revenue claim were a revenue claim of that other State even if, at the time when such measures are applied, the revenue claim is not enforceable in the first-mentioned State or is owed by a person who has a right to prevent its collection.

---

<sup>1</sup> In some countries, national law, policy or administrative considerations may not allow or justify the type of assistance envisaged under this Article or may require that this type of assistance be restricted, e.g. to countries that have similar tax systems or tax administrations or as to the taxes covered. For that reason, the Article should only be included in the Convention where each State concludes that, based on the factors described in paragraph 1 of the Commentary on the Article, they can agree to provide assistance in the collection of taxes levied by the other State.

5. Notwithstanding the provisions of paragraphs 3 and 4, a revenue claim accepted by a Contracting State for purposes of paragraph 3 or 4 shall not, in that State, be subject to the time limits or accorded any priority applicable to a revenue claim under the laws of that State by reason of its nature as such. In addition, a revenue claim accepted by a Contracting State for the purposes of paragraph 3 or 4 shall not, in that State, have any priority applicable to that revenue claim under the laws of the other Contracting State.

6. Proceedings with respect to the existence, validity or the amount of a revenue claim of a Contracting State shall not be brought before the courts or administrative bodies of the other Contracting State.

7. Where, at any time after a request has been made by a Contracting State under paragraph 3 or 4 and before the other Contracting State has collected and remitted the relevant revenue claim to the first-mentioned State, the relevant revenue claim ceases to be

- a) in the case of a request under paragraph 3, a revenue claim of the first-mentioned State that is enforceable under the laws of that State and is owed by a person who, at that time, cannot, under the laws of that State, prevent its collection, or
- b) in the case of a request under paragraph 4, a revenue claim of the first-mentioned State in respect of which that State may, under its laws, take measures of conservancy with a view to ensure its collection

the competent authority of the first-mentioned State shall promptly notify the competent authority of the other State of that fact and, at the option of the other State, the first-mentioned State shall either suspend or withdraw its request.

8. In no case shall the provisions of this Article be construed so as to impose on a Contracting State the obligation:

- a) to carry out administrative measures at variance with the laws and administrative practice of that or of the other Contracting State;
- b) to carry out measures which would be contrary to public policy (*ordre public*);
- c) to provide assistance if the other Contracting State has not pursued all reasonable measures of collection or conservancy, as the case may be, available under its laws or administrative practice;
- d) to provide assistance in those cases where the administrative burden for that State is clearly disproportionate to the benefit to be derived by the other Contracting State.

## HISTORY

**The title of Article 27:** Replaced on 28 January 2003 when the previous Article 27 (Members of Diplomatic Missions and Consular Posts) was renumbered as Article 28 (see history of Article 28) and a new Article 27 (Assistance in the Collection of Taxes) was added by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2003.

**Paragraph 1:** Replaced on 28 January 2003 when paragraph 1 was renumbered as paragraph 1 of Article 28 (see history of paragraph 1 of Article 28) and a new paragraph 1 was added by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2003 (see history of Article 28).

**Paragraph 2:** Added on 28 January 2003 by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2002.

**Paragraph 3:** Added on 28 January 2003 by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2002.

**Paragraph 4:** Added on 28 January 2003 by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2002.

**Paragraph 5:** Added on 28 January 2003 by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2002.

**Paragraph 6:** Added on 28 January 2003 by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2002.

**Paragraph 7:** Added on 28 January 2003 by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2002.

**Paragraph 8:** Added on 28 January 2003 by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2002.

## **ARTICLE 28**

### **MEMBERS OF DIPLOMATIC MISSIONS AND CONSULAR POSTS**

Nothing in this Convention shall affect the fiscal privileges of members of diplomatic missions or consular posts under the general rules of international law or under the provisions of special agreements.

### **HISTORY**

Article 28 corresponds to Article 27 as it read before 28 January 2003. The previous Article 28 (Territorial Extension) was renumbered as Article 29 (see history of Article 30) and Article 27 was renumbered as Article 28 as a consequence of the addition of a new Article 27 (Assistance in the Collection of Taxes) by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2003.

Article 27 and its title were amended on 31 March 1994 by the report entitled “1994 Update to the Model Tax Convention”, adopted by the OECD Council on 31 March 1994. In the 1977 Model Convention and until 31 March 1994, Article 27 and its title read as follows:

#### **“DIPLOMATIC AGENTS AND CONSULAR OFFICERS**

Nothing in this Convention shall affect the fiscal privileges of diplomatic agents or consular officers under the general rules of international law or under the provisions of special agreements.”

Article 27 and its title were previously amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, Article 27 and its title read as follows:

#### **“DIPLOMATIC AND CONSULAR OFFICIALS**

Nothing in this Convention shall affect the fiscal privileges of diplomatic or consular officials under the general rules of international law or under the provisions of special agreements.”

## ARTICLE 29

### ENTITLEMENT TO BENEFITS<sup>1</sup>

1. [Provision that, subject to paragraphs 3 to 5, restricts treaty benefits to a resident of a Contracting State who is a “qualified person” as defined in paragraph 2].
2. [Definition of situations where a resident is a qualified person, which covers
  - an individual;
  - a Contracting State, its political subdivisions and their agencies and instrumentalities;
  - certain publicly-traded companies and entities;
  - certain affiliates of publicly-listed companies and entities;
  - certain non-profit organisations and recognised pension funds;
  - other entities that meet certain ownership and base erosion requirements;
  - certain collective investment vehicles].
3. [Provision that provides treaty benefits to certain income derived by a person that is not a qualified person if the person is engaged in the active conduct of a business in its State of residence and the income emanates from, or is incidental to, that business].
4. [Provision that provides treaty benefits to a person that is not a qualified person if at least more than an agreed proportion of that entity is owned by certain persons entitled to equivalent benefits].
5. [Provision that provides treaty benefits to a person that qualifies as a “headquarters company”].
6. [Provision that allows the competent authority of a Contracting State to grant certain treaty benefits to a person where benefits would otherwise be denied under paragraph 1].
7. [Definitions applicable for the purposes of paragraphs 1 to 7].

1 The drafting of this Article will depend on how the Contracting States decide to implement their common intention, reflected in the preamble of the Convention and incorporated in the minimum standard agreed to as part of the OECD/G20 Base Erosion and Profit Shifting Project, to eliminate double taxation without creating opportunities for non-taxation or reduced taxation through tax evasion or avoidance, including through treaty-shopping arrangements. This may be done either through the adoption of paragraph 9 only, through the adoption of the detailed version of paragraphs 1 to 7 that is described in the Commentary on Article 29 together with the implementation of an anti-conduit mechanism as described in paragraph 187 of that Commentary, or through the adoption of paragraph 9 together with any variation of paragraphs 1 to 7 described in the Commentary on Article 29.

8. a) Where

- (i) an enterprise of a Contracting State derives income from the other Contracting State and the first-mentioned State treats such income as attributable to a permanent establishment of the enterprise situated in a third jurisdiction, and
- (ii) the profits attributable to that permanent establishment are exempt from tax in the first-mentioned State,

the benefits of this Convention shall not apply to any item of income on which the tax in the third jurisdiction is less than the lower of [rate to be determined bilaterally] of the amount of that item of income and 60 per cent of the tax that would be imposed in the first-mentioned State on that item of income if that permanent establishment were situated in the first-mentioned State. In such a case any income to which the provisions of this paragraph apply shall remain taxable according to the domestic law of the other State, notwithstanding any other provisions of the Convention.

- b) The preceding provisions of this paragraph shall not apply if the income derived from the other State emanates from, or is incidental to, the active conduct of a business carried on through the permanent establishment (other than the business of making, managing or simply holding investments for the enterprise's own account, unless these activities are banking, insurance or securities activities carried on by a bank, insurance enterprise or registered securities dealer, respectively).
- c) If benefits under this Convention are denied pursuant to the preceding provisions of this paragraph with respect to an item of income derived by a resident of a Contracting State, the competent authority of the other Contracting State may, nevertheless, grant these benefits with respect to that item of income if, in response to a request by such resident, such competent authority determines that granting such benefits is justified in light of the reasons such resident did not satisfy the requirements of this paragraph (such as the existence of losses). The competent authority of the Contracting State to which a request has been made under the preceding sentence shall consult with the competent authority of the other Contracting State before either granting or denying the request.

9. Notwithstanding the other provisions of this Convention, a benefit under this Convention shall not be granted in respect of an item of income or capital if it is reasonable to conclude, having regard to all relevant facts and circumstances, that obtaining that benefit was one of the principal purposes of any arrangement or transaction that resulted directly or indirectly in that benefit, unless it is established that granting that benefit in these

circumstances would be in accordance with the object and purpose of the relevant provisions of this Convention.

## HISTORY

**The title of Article 29:** Replaced on 21 November 2017 when the previous Article 29 (Territorial Extension) was renumbered as Article 30 (see history of Article 30) and a new Article 29 (Entitlement to Benefits) was added, by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

**Paragraph 1:** Replaced on 21 November 2017 when paragraph 1 was renumbered as paragraph 1 of Article 30 (see history of paragraph 1 of Article 30) and a new paragraph 1 was added, by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

**Paragraph 2:** Replaced on 21 November 2017 when paragraph 2 was renumbered as paragraph 2 of Article 30 (see history of paragraph 2 of Article 30) and a new paragraph 2 was added, by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

**Paragraph 3:** Added on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

**Paragraph 4:** Added on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

**Paragraph 5:** Added on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November , as a result of follow-up work on another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

**Paragraph 6:** Added on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

**Paragraph 7:** Added on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

**Paragraph 8:** Added on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, as a result of follow-up work on another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

**Paragraph 9:** Added on 21 November 2017 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017, on the basis of another report entitled “Preventing the Granting of Treaty Benefits in Inappropriate Circumstances, Action 6 - Final Report”, endorsed by the G20 at the 2015 G20 Antalya Summit on 15-16 November 2015.

## ARTICLE 30

### TERRITORIAL EXTENSION<sup>1</sup>

1. This Convention may be extended, either in its entirety or with any necessary modifications [to any part of the territory of (State A) or of (State B) which is specifically excluded from the application of the Convention or], to any State or territory for whose international relations (State A) or (State B) is responsible, which imposes taxes substantially similar in character to those to which the Convention applies. Any such extension shall take effect from such date and subject to such modifications and conditions, including conditions as to termination, as may be specified and agreed between the Contracting States in notes to be exchanged through diplomatic channels or in any other manner in accordance with their constitutional procedures.

2. Unless otherwise agreed by both Contracting States, the termination of the Convention by one of them under Article 32 shall also terminate, in the manner provided for in that Article, the application of the Convention [to any part of the territory of (State A) or of (State B) or] to any State or territory to which it has been extended under this Article.

---

1 The words between brackets are of relevance when, by special provision, a part of the territory of a Contracting State is excluded from the application of the Convention.

## HISTORY

Article 30 corresponds to Article 29 as it read before 21 November 2017. On that date, Article 29 was renumbered as Article 30 as a consequence of the addition of a new Article 29 (Entitlement to Benefits) and the renumbering of the following Articles by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017.

Article 29 as it read after 28 January 2003 corresponded to Article 28 as it read before that date. On 28 January 2003, the Article 29 (Entry into Force) was renumbered as Article 30 (see history of Article 31) and Article 28 was renumbered as Article 29 as a consequence of the addition of a new Article 27 (Assistance in the Collection of Taxes) and the renumbering of the following Articles, by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2003.

**Paragraph 1:** Corresponds to paragraph 1 of Article 29 as it read before 21 November 2017. On that date, Article 30 was renumbered as Article 31 (see history of paragraph 1 of Article 31) and paragraph 1 of Article 29 was renumbered as paragraph 1 of Article 30, by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017.

Paragraph 1 of Article 29 as it read after 28 January 2003 corresponded to paragraph 1 of Article 28 of the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963). On 28 January 2003, paragraph 1 of Article 29 was renumbered as paragraph 1 of Article 30 (see history of paragraph 2 of Article 31) and paragraph 1 of Article 28 was renumbered as paragraph 1 of Article 29, by the report entitled “The

MODEL CONVENTION

---

2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2003.

**Paragraph 2:** Corresponds to paragraph 2 of Article 29 as it read before 21 November 2017. On that date, paragraph 2 of Article 29 was renumbered as paragraph 2 of Article 30 by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017. After 28 January 2003 and until 21 November 2017, paragraph 2 read as follows:

“2. Unless otherwise agreed by both Contracting States, the termination of the Convention by one of them under Article 31 shall also terminate, in the manner provided for in that Article, the application of the Convention [to any part of the territory of (State A) or of (State B) or] to any State or territory to which it has been extended under this Article.”

Paragraph 2 as it read after 28 January 2003 corresponded to paragraph 2 of Article 28 as it read before that date. On 28 January 2003, paragraph 2 of Article 29 was renumbered as paragraph 2 of Article 30 (see history of paragraph 2 of Article 31) and paragraph 2 of Article 28 was renumbered as paragraph 2 of Article 29, by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2003.

Paragraph 2 of Article 28 was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, paragraph 2 of Article 28 read as follows:

“2. Unless otherwise agreed by both Contracting States, the denunciation of the Convention by one of them under Article 30 shall terminate, in the manner provided for in that Article, the application of the Convention [to any part of the territory of (State A) or of (State B) or] to any State or territory to which it has been extended under this Article.”

## Chapter VII

# FINAL PROVISIONS

### ARTICLE 31

#### ENTRY INTO FORCE

1. This Convention shall be ratified and the instruments of ratification shall be exchanged at ..... as soon as possible.
2. The Convention shall enter into force upon the exchange of instruments of ratification and its provisions shall have effect:
  - a) (in State A): .....
  - b) (in State B): .....

### HISTORY

Article 31 corresponds to Article 30 as it read before 21 November 2017. On that date, Article 30 was renumbered as Article 31 as a consequence of the addition of a new Article 29 (Entitlement to Benefits) and the renumbering of the following Articles by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017.

Article 30 as it read after 28 January 2003 corresponded to Article 29 as it read before that date. On 28 January 2003, Article 29 was renumbered as Article 30 and Article 30 (Termination) was renumbered as Article 31 (see history of Article 32) as a consequence of the addition of a new Article 27 (Assistance in the Collection of Taxes) and the renumbering of the following Articles, by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2003.

**Paragraph 1:** Corresponds to paragraph 1 of Article 30 as it read before 21 November 2017. On that date, paragraph 1 of Article 31 was renumbered as paragraph 1 of Article 32 (see history of paragraph 1 of Article 32) and paragraph 1 of Article 30 was renumbered as paragraph 1 of Article 31, by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017.

Paragraph 1 of Article 30 as it read after 28 January 2003 corresponded to paragraph 1 of Article 29 of the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963). On 28 January 2003, paragraph 1 of Article 30 was renumbered as paragraph 1 of Article 31 (see history of paragraph 1 of Article 32) and paragraph 1 of Article 29 was renumbered as paragraph 1 of Article 30, by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2003.

**Paragraph 2:** Corresponds to paragraph 2 of Article 30 as it read before 21 November 2017. On that date, paragraph 2 of Article 31 was renumbered as paragraph 2 of Article 32 (see history of paragraph 2 of Article 32) and paragraph 2 of Article 30 was renumbered as paragraph 2 of Article 31, by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017.

MODEL CONVENTION

---

Paragraph 2 of Article 30 as it read after 28 January 2003 corresponded to paragraph 2 of Article 29 of the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963). On 28 January 2003, paragraph 2 of Article 30 was renumbered as paragraph 2 of Article 31 (see history of paragraph 2 of Article 32) and paragraph 2 of Article 29 was renumbered as paragraph 2 of Article 30, by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2003.

## ARTICLE 32

### TERMINATION

This Convention shall remain in force until terminated by a Contracting State. Either Contracting State may terminate the Convention, through diplomatic channels, by giving notice of termination at least six months before the end of any calendar year after the year ..... In such event, the Convention shall cease to have effect:

- a) (in State A): .....
- b) (in State B): .....

### TERMINAL CLAUSE<sup>1</sup>

- <sup>1</sup> The terminal clause concerning the signing shall be drafted in accordance with the constitutional procedure of both Contracting States.

## HISTORY

Article 32 corresponds to Article 31 as it read before 21 November 2017. On that date, Article 31 was renumbered as Article 32 as a consequence of the addition of a new Article 29 (Entitlement to Benefits) and the renumbering of the following Articles, by the report entitled “The 2017 Update to the Model Tax Convention”, adopted by the OECD Council on 21 November 2017.

Article 31 as it read after 28 January 2003 corresponded to Article 30 as it read before that date. On 28 January 2003, Article 30 was renumbered as Article 31 as a consequence of the addition of a new Article 27 (Assistance in the Collection of Taxes) and the renumbering of the following Articles, by the report entitled “The 2002 Update to the Model Tax Convention”, adopted by the OECD Council on 28 January 2003.

Article 30 was amended when the 1977 Model Convention was adopted by the OECD Council on 11 April 1977. In the 1963 Draft Convention (adopted by the OECD Council on 30 July 1963) and until the adoption of the 1977 Model Convention, Article 30 read as follows:

“This Convention shall remain in force until denounced by one of the Contracting States. Either Contracting State may denounce the Convention, through diplomatic channels, by giving notice of termination at least six months before the end of any calendar year after the year ..... In such event, the Convention shall cease to have effect:

- a) in (State A) : .....
- b) in (State B) : .....

## COMMENTARY ON ARTICLE 27 CONCERNING THE ASSISTANCE IN THE COLLECTION OF TAXES

1. This Article provides the rules under which Contracting States<sup>1</sup> may agree to provide each other assistance in the collection of taxes. In some States, national law or policy may prevent this form of assistance or set limitations to it. Also, in some cases, administrative considerations may not justify providing assistance in the collection of taxes to another State or may similarly limit it. During the negotiations, each Contracting State will therefore need to decide whether and to what extent assistance should be given to the other State based on various factors, including

- the stance taken in national law to providing assistance in the collection of other States' taxes;
- whether and to what extent the tax systems, tax administrations and legal standards of the two States are similar, particularly as concerns the protection of fundamental taxpayers' rights (e.g. timely and adequate notice of claims against the taxpayer, the right to confidentiality of taxpayer information, the right to appeal, the right to be heard and present argument and evidence, the right to be assisted by a counsel of the taxpayer's choice, the right to a fair trial, etc.);
- whether assistance in the collection of taxes will provide balanced and reciprocal benefits to both States;
- whether each State's tax administration will be able to effectively provide such assistance;
- whether trade and investment flows between the two States are sufficient to justify this form of assistance;
- whether for constitutional or other reasons the taxes to which the Article applies should be limited.

The Article should only be included in the Convention where each State concludes that, based on these factors, they can agree to provide assistance in the collection of taxes levied by the other State.

*(Replaced on 28 January 2003; see HISTORY)*

2. The Article provides for comprehensive collection assistance. Some States may prefer to provide a more limited type of collection assistance. This may be the only form of collection assistance that they are generally able to

<sup>1</sup> Throughout this Commentary on Article 27, the State making a request for assistance is referred to as the "requesting State" whilst the State from which assistance is requested is referred to as the "requested State".

provide or that they may agree to in a particular convention. For instance, a State may want to limit assistance to cases where the benefits of the Convention (e.g. a reduction of taxes in the State where income such as interest arises) have been claimed by persons not entitled to them. States wishing to provide such limited collection assistance are free to adopt bilaterally an alternative Article drafted along the following lines:

#### **Article 27**

##### **Assistance in the collection of taxes**

1. The Contracting States shall lend assistance to each other in the collection of tax to the extent needed to ensure that any exemption or reduced rate of tax granted under this Convention shall not be enjoyed by persons not entitled to such benefits. The competent authorities of the Contracting States may by mutual agreement settle the mode of application of this Article.
2. In no case shall the provisions of this Article be construed so as to impose on a Contracting State the obligation:
  - a) to carry out administrative measures at variance with the laws and administrative practice of that or of the other Contracting State;
  - b) to carry out measures which would be contrary to public policy (*ordre public*).

*(Replaced on 28 January 2003; see HISTORY)*

#### **Paragraph 1**

3. This paragraph contains the principle that a Contracting State is obliged to assist the other State in the collection of taxes owed to it, provided that the conditions of the Article are met. Paragraphs 3 and 4 provide the two forms that this assistance will take.

*(Replaced on 28 January 2003; see HISTORY)*

4. The paragraph also provides that assistance under the Article is not restricted by Articles 1 and 2. Assistance must therefore be provided as regards a revenue claim owed to a Contracting State by any person, whether or not a resident of a Contracting State. Some Contracting States may, however, wish to limit assistance to taxes owed by residents of either Contracting State. Such States are free to restrict the scope of the Article by omitting the reference to Article 1 from the paragraph.

*(Replaced on 28 January 2003; see HISTORY)*

5. Article 26 applies to the exchange of information for purposes of the provisions of this Article. The confidentiality of information exchanged for purposes of assistance in collection is thus ensured.

*(Replaced on 28 January 2003; see HISTORY)*

6. The paragraph finally provides that the competent authorities of the Contracting States may, by mutual agreement, decide the details of the practical application of the provisions of the Article.

*(Replaced on 28 January 2003; see HISTORY)*

7. Such agreement should, in particular, deal with the documentation that should accompany a request made pursuant to paragraph 3 or 4. It is common practice to agree that a request for assistance will be accompanied by such documentation as is required by the law of the requested State, or has been agreed to by the competent authorities of the Contracting States, and that is necessary to undertake, as the case may be, collection of the revenue claim or measures of conservancy. Such documentation may include, for example, a declaration that the revenue claim is enforceable and is owed by a person who cannot, under the law of the requesting State, prevent its collection or an official copy of the instrument permitting enforcement in the requesting State. An official translation of the documentation in the language of the requested State should also be provided. It could also be agreed, where appropriate, that the instrument permitting enforcement in the requesting State shall, where appropriate and in accordance with the provisions in force in the requested State, be accepted, recognised, supplemented or replaced, as soon as possible after the date of the receipt of the request for assistance, by an instrument permitting enforcement in the latter State.

*(Added on 28 January 2003; see HISTORY)*

8. The agreement should also deal with the issue of the costs that will be incurred by the requested State in satisfying a request made under paragraph 3 or 4. In general, the costs of collecting a revenue claim are charged to the debtor but it is necessary to determine which State will bear costs that cannot be recovered from that person. The usual practice, in this respect, is to provide that in the absence of an agreement specific to a particular case, ordinary costs incurred by a State in providing assistance to the other State will not be reimbursed by that other State. Ordinary costs are those directly and normally related to the collection, i.e. those expected in normal domestic collection proceedings. In the case of extraordinary costs, however, the practice is to provide that these will be borne by the requesting State, unless otherwise agreed bilaterally. Such costs would cover, for instance, costs incurred when a particular type of procedure has been used at the request of the other State, or supplementary costs of experts, interpreters, or translators.

C (27)

Most States also consider as extraordinary costs the costs of judicial and bankruptcy proceedings. The agreement should provide a definition of extraordinary costs and consultation between the Contracting States should take place in any particular case where extraordinary costs are likely to be involved. It should also be agreed that, as soon as a Contracting State anticipates that extraordinary costs may be incurred, it will inform the other Contracting State and indicate the estimated amount of such costs so that the other State may decide whether such costs should be incurred. It is, of course, also possible for the Contracting States to provide that costs will be allocated on a basis different from what is described above; this may be necessary, for instance, where a request for assistance in collection is suspended or withdrawn under paragraph 7 or where the issue of costs incurred in providing assistance in collection is already dealt with in another legal instrument applicable to these States.

*(Added on 28 January 2003; see HISTORY)*

9. In the agreement, the competent authorities may also deal with other practical issues such as:

- whether there should be a limit of time after which a request for assistance could no longer be made as regards a particular revenue claim;
- what should be the applicable exchange rate when a revenue claim is collected in a currency that differs from the one which is used in the requesting State;
- how should any amount collected pursuant to a request under paragraph 3 be remitted to the requesting State.

*(Added on 28 January 2003; see HISTORY)*

## **Paragraph 2**

10. Paragraph 2 defines the term “revenue claim” for purposes of the Article. The definition applies to any amount owed in respect of all taxes that are imposed on behalf of the Contracting States, or of their political subdivisions or local authorities, but only insofar as the imposition of such taxes is not contrary to the Convention or other instrument in force between the Contracting States. It also applies to the interest, administrative penalties and costs of collection or conservancy that are related to such an amount. Assistance is therefore not restricted to taxes to which the Convention generally applies pursuant to Article 2, as is confirmed in paragraph 1.

*(Added on 28 January 2003; see HISTORY)*

11. Some Contracting States may prefer to limit the application of the Article to taxes that are covered by the Convention under the general rules of

Article 2. States wishing to do so should replace paragraphs 1 and 2 by the following:

1. The Contracting States shall lend assistance to each other in the collection of revenue claims. This assistance is not restricted by Article 1. The competent authorities of the Contracting States may by mutual agreement settle the mode of application of this Article.
2. The term “revenue claim” as used in this Article means any amount owed in respect of taxes covered by the Convention together with interest, administrative penalties and costs of collection or conservancy related to such amount.

*(Added on 28 January 2003; see HISTORY)*

12. Similarly, some Contracting States may wish to limit the types of taxes to which the provisions of the Article will apply or to clarify the scope of application of these provisions by including in the definition a detailed list of the taxes. States wishing to do so are free to adopt bilaterally the following definition:

The term “revenue claim” as used in this Article means an amount owed in respect of the following taxes imposed by the Contracting States, insofar as the taxation thereunder is not contrary to this Convention or any other instrument to which the Contracting States are parties, as well as interest, administrative penalties and costs of collection or conservancy related to such amount:

- a) (in State A): ...
- b) (in State B): ...

*(Amended on 15 July 2014; see HISTORY)*

13. In order to make sure that the competent authorities can freely communicate information for purposes of the Article, Contracting States should ensure that Article 26 is drafted in a way that allows exchanges of information with respect to any tax to which this Article applies.

*(Added on 28 January 2003; see HISTORY)*

14. Nothing in the Convention prevents the application of the provisions of the Article to revenue claims that arise before the Convention enters into force, as long as assistance with respect to these claims is provided after the treaty has entered into force and the provisions of the Article have become effective. Contracting States may find it useful, however, to clarify the extent to which the provisions of the Article are applicable to such revenue claims, in particular when the provisions concerning the entry into force of their convention provide that the provisions of that convention will have effect with respect to taxes arising or levied from a certain time. States wishing to restrict

C (27)

the application of the Article to claims arising after the Convention enters into force are also free to do so in the course of bilateral negotiations.

*(Added on 28 January 2003; see HISTORY)*

### **Paragraph 3**

15. This paragraph stipulates the conditions under which a request for assistance in collection can be made. The revenue claim has to be enforceable under the law of the requesting State and be owed by a person who, at that time, cannot, under the law of that State, prevent its collection. This will be the case where the requesting State has the right, under its internal law, to collect the revenue claim and the person owing the amount has no administrative or judicial rights to prevent such collection.

*(Added on 28 January 2003; see HISTORY)*

16. In many States, a revenue claim can be collected even though there is still a right to appeal to an administrative body or a court as regards the validity or the amount of the claim. If, however, the internal law of the requested State does not allow it to collect its own revenue claims when appeals are still pending, the paragraph does not authorise it to do so in the case of revenue claims of the other State in respect of which such appeal rights still exist even if this does not prevent collection in that other State. Indeed, the phrase “collected by that other State in accordance with the provisions of its laws applicable to the enforcement and collection of its own taxes as if the revenue claim were a revenue claim of that other State” has the effect of making that requested State’s internal law restriction applicable to the collection of the revenue claim of the other State. Many States, however, may wish to allow collection assistance where a revenue claim may be collected in the requesting State notwithstanding the existence of appeal rights even though the requested State’s own law prevents collection in that case. States wishing to do so are free to modify paragraph 3 to read as follows:

When a revenue claim of a Contracting State is enforceable under the laws of that State and is owed by a person who, at that time, cannot, under the laws of that State, prevent its collection, that revenue claim shall, at the request of the competent authority of that State, be accepted for purposes of collection by the competent authority of the other Contracting State. That revenue claim shall be collected by that other State in accordance with the provisions of its laws applicable to the enforcement and collection of its own taxes as if the revenue claim were a revenue claim of that other State that met the conditions allowing that other State to make a request under this paragraph.

*(Added on 28 January 2003; see HISTORY)*

17. Paragraph 3 also regulates the way in which the revenue claim of the requesting State is to be collected by the requested State. Except with respect to time limits and priority (see the Commentary on paragraph 5), the requested State is obliged to collect the revenue claim of the requesting State as though it were the requested State's own revenue claim even if, at the time, it has no need to undertake collection actions related to that taxpayer for its own purposes. As already mentioned, the phrase "in accordance with the provisions of its law applicable to the enforcement and collection of its own taxes" has the effect of limiting collection assistance to claims with respect to which no further appeal rights exist if, under the requested State's internal law, collection of that State's own revenue claims are not permitted as long as such rights still exist.
